

Natural Resources & Environmental Commission Agenda Report

DATE:	April 27, 2021
FROM:	Anteneh Tesfaye, Acting Deputy Public Works Director Arpy Kasparian, Water Conservation & Sustainability Analyst
SUBJECT:	Advance Climate Action Plan Timeline for Ordinance Banning Gas- powered Leaf Blowers

Recommendation

The Natural Resources and Environmental Commission (NREC) recommends to City Council to direct staff to advance the Climate Action Plan timeline for developing the ordinance banning gas-powered leaf blowers by removing other initiatives from the NREC Work Plan and Green Action Plan.

Background

Commission Work Plans

Every year, City commissions are required to provide a Work Plan to the City Council. The Work Plans present objectives planned for the coming year. Drafting, review, and final approval of the Work Plans is done at the Commission level. The 2021 NREC Work Plan was first presented to the commission during their November 24, 2020 meeting and was presented again for approval at the January 26, 2021 NREC meeting where it was approved unanimously. This review process offers the opportunity for input by all commissioners: current, outgoing, and incoming. The current NREC Work Plan includes the discussion and adoption of the Mandatory Organics Recycling Ordinance (satisfies several Moves of Goal III of the Green Plan; satisfies California State mandates AB1826 and SB1383); Virtual Earth Day (annual event); approval of the FY 21/22 Water Conservation Program (annual program and several Moves of Goal II of the Green Plan); review of current parking lot codes (Move IV.1.1 of Green Plan); review of current Cool Roof codes (Move IV.2.1 of Green Plan); and development of a plastic-free/zero waste guide for City events (Move I.1.2 of Green Plan). In addition, NREC conducts tree removal hearings as needed and is to receive progress reports on both the Green Action Plan and Climate Action Plan. To date, NREC has once discussed the Mandatory Organics Recycling Ordinance, discussed Virtual Earth Day, and has conducted several tree hearings. See attached 2021 NREC Work Plan.

Green Action Plan

The City of South Pasadena City Council adopted the South Pasadena Green Action Plan (Green Plan) on November 20, 2019, per the recommendation of the Natural Resources and Environmental Commission. The Green Plan encompasses 63 short-term sustainability

Advance Climate Action Plan Timeline for Ordinance Banning Gas-powered Leaf Blowers April 27, 2021 Page 2 of 4

initiatives/actions to be implemented before and in conjunction with the City's Climate Action Plan. The Green Plan addresses plastic reduction, water conservation, organics diversion, heat island mitigation, and preparation for future sustainability initiatives. The timeline of the completion of all Moves in the Green Plan is January 2020 to June 2021.

Climate Action Plan

The City of South Pasadena City Council adopted the City's first Climate Action Plan (CAP) on December 16, 2020, per the recommendation of the Natural Resources and Environmental Commission. The CAP is a strategy for reducing the City's greenhouse gas emissions in accordance with statewide targets. The CAP outlines 15 Plays (i.e. strategies) and 90 Moves (i.e. actions) in the Energy, Transportation, Water, Solid Waste, Carbon Sequestration, and Municipal sectors. Moves are given an implementation timeframe of either short-term, mid-term, or longterm, that indicates the approximate time period in which the specific Move will be implemented/completed. Short term Moves have an implementation timeframe of 1-3 years, mid-term timeframes are 3-5 years, and long-term timeframes are more than 5 years.

Discussion/Analysis

Restricting the use of gas-powered lawn equipment, especially leaf blowers, is of great importance to the South Pasadena community. The City's Climate Action Plan, which was adopted in December 2020, includes the following action to be taken in the short term (1-3 years):

"Establish an ordinance that restricts use of gas-powered lawn equipment, including leaf blowers, and provide information on the City website outlining available incentives." (South Pasadena Climate Action Plan, T.1.e, page 49)

In 2016, the City of South Pasadena worked with the American Green Zone Alliance (AGZA) to become a certified Green Zone City, meaning that all grounds maintenance on municipal properties including all public parks and the golf course, are serviced exclusively with low-noise, zero-emission, electric machinery.

The City has partnered with AGZA once again to provide our residents with resources and education on switching to electric lawn equipment. An educational webinar is tentatively scheduled for June 23, 2021 with an in-person demonstration following in July or August 2021. In addition, information regarding the AQMD Commercial Electric Lawn & Garden Equipment Exchange Program can be found on the South Pasadena Environmental Programs webpage at www.southpasadenaca.gov/environmentalprograms.

Staff estimate that the process for developing the above ordinance will begin in 2022 as part of NREC's 2022 Work Plan (upon commission approval) which would allow staff to complete current sustainability initiatives and address state mandates regarding organic waste. Developing the ordinance would require several iterations and discussions at commission and council meetings, continuous community outreach to prepare gardeners to purchase new equipment, a study on available incentives for new equipment or development of new incentives, a rigorous

Advance Climate Action Plan Timeline for Ordinance Banning Gas-powered Leaf Blowers April 27, 2021 Page 3 of 4

educational campaign that would include webinars and in-person demonstrations, and establishment of a registration, reporting, and enforcement mechanism/system.

The recommendation presented is to advance this timeline to begin the process of developing an ordinance at the next NREC meeting upon Council's approval, instead of beginning in 2022. Due to the lack of staff's resources, to accomplish this, several current sustainability initiatives from the Green Action Plan and the 2021 NREC Work Plan must be put on hold. The following is a list of changes to be made:

2021 NREC Work Plan

- 1. Approval of the proposed FY 21/22 Water Conservation Program will be further delayed.
- 2. Review of current Parking Lot Codes to provide recommendations (Move IV.1.1 of Green Plan) will be moved to 2022.
- 3. Review of current Cool Roof Codes to provide recommendations (Move IV.1.1 of Green Plan) will be moved to 2022.
- 4. Developing a plastic-free/zero-waste guide for City events (Move I.1.2) will be moved to 2022.
- 5. Green Action Plan progress reports will be reduced from three to two.
- 6. Climate Action Plan progress reports will be reduced from two to one.

Green Action Plan

- 1. Greywater program will be placed on hold. Funding for a program may not be available in the future (Move II.1.2).
- 2. Creating informational materials on greywater systems will be placed on hold (Move II.1.4).
- 3. Evaluating the current water conservation program in respect to local vendor supplies will be moved to occur for the FY22-23 Water Conservation Program instead of the FY21-22 program (Move II.2.2).
- 4. Developing an impervious surface removal rebate program will be moved to occur for the FY22-23 Water Conservation Program instead of the FY21-22 program (Move II.4.4).
- 5. Review of current Parking Lot Codes to provide recommendations (Move IV.1.1) will be delayed.
- 6. Review of current Cool Roof Codes to provide recommendations (Move IV.1.1) will be delayed.
- 7. Developing a plastic-free/zero-waste guide for City events (Move I.1.2) will be delayed.

Next Steps

- 1. If approved, staff will present the recommendation to City Council.
- 2. If not approved, staff and commission will continue tasks according to current NREC Work Plan.

Legal Review

The City Attorney has not reviewed this item.

Advance Climate Action Plan Timeline for Ordinance Banning Gas-powered Leaf Blowers April 27, 2021 Page 4 of 4

Fiscal Impact

The ordinance restricting gas-powered lawn equipment would require gardeners to obtain new electric equipment which will likely incur a cost. Staff must investigate funding sources, either within or outside of the City budget, for incentives to ease the financial challenges of switching to new equipment.

Public Notification of Agenda Item

The public was made aware that this item was to be considered this evening by virtue of its inclusion on the legally publicly noticed agenda, posting of the same agenda and reports on the City's website and/or notice in the *South Pasadena Review* and/or the *Pasadena Star-News*.

Sustainability in South Pasadena

Sustainability has always been an important part of life in South Pasadena. Here are just a few of the ways South Pasadena has established itself as a leader in sustainable practices:

Certified Green Zone City In 2016, the City became the first in the nation to be certified as a Green Zone City by the American Green Zone Alliance. The certification ensures that grounds maintenance on municipal properties - spanning 41 acres - are serviced eclusively with low-noise, zero-emission, electric machinery. This equipment prevents South Pasadena from creating 31 tons of pollutants every year.

Plastic Bag Ban In 2014, the City banned plastic bags, two years before it became state law.

Expanded Polystyrene Ban In 2016, South Pasadena City Council voted to ban the sale and use of expanded polystyrene - a petroleum byproduct that is neither readily recyclable nor biodegradable. The ban applies to restaurants, retail vendors, food packagers, food providers, and City vendors.

Tree City USA South Pasadena is proud to be a Tree City, 20 years and counting.

City Water Conservation Program For the past several years, the City has offered rebates and water conservation programs for its residents and business owners contributing to an 18% water use reduction between 2013 and 2018.

Clean Power Alliance In 2019, South Pasadena joined the Clean Power Alliance and chose to select 100% Green Power as the default option for our community.

On the Move

South Pasadena is dedicated to protecting the environment and our natural resources. To further strengthen the City's commitment to sustainability, City staff, with the help of South Pasadena residents and the Natural Resources and Environmental Commission (NREC), have gathered and prioritized sustainability initiatives in the form of this South Pasadena Green Action Plan (Green Plan).

The Green Plan, includes five overarching goals to address plastic reduction, water conservation, organics diversion, urban heat island mitigation, and planning for the future. Each goal includes strategies ("plays") and specific actions ("moves") for achieving these objectives.

This short-term plan will allow City staff to focus on building the foundation for achieving greater sustainability goals to be incorporated in the upcoming City's Climate Action Plan (CAP).

The Big League

Simultaneously to the Green Plan, the City is also in the process of completing a CAP: a longterm plan aimed to reduce the City's greenhouse gas emissions. The anticipated completion date of the CAP is the end of calendar year 2020. The short-term Green Plan will allow City Staff to evaluate the feasibility of sustainability initiatives immediately while the CAP is being developed. The actions in the Green Plan will act as stepping stones for the comprehensive CAP... practice for the big league!

The Team

The South Pasadena Green Action Plan was a collaborative effort that encompassed the values, ideas, and efforts from all City Department Staff, City Council, the NREC, and the passionate residents of South Pasadena.

The Players

The **Public Works Department** will be leading the game to ensure that all initiatives have been tackled and all progress and outcomes are documented. Additional players in the game include the Finance Department, Management Services, Community Services, the Building and Planning Department, the Natural Resources and Environmental Commission, the Chamber of Commerce, Metropolitan Water District, Upper San Gabriel Valley Municipal Water District, and Athens Services. As we progress through the plan, additional players will join the team.

How to Play the Game

Goal → what we want to accomplish
 Play → how we will reach the goal (strategy)
 Move→ the action to be taken

Field \rightarrow which sectors are involved: municipal, commercial, residential, or schools

- **Players** → stakeholders or departments involved
- **Score** \rightarrow how the completion of the move is measured (deliverables)
- **Clock** \rightarrow projected time of completion

FY19/20 Q3 = January 2020 - March 2020

FY19/20 Q4 = April 2020 - June 2020

FY20/21 Q1 = July 2020 - September 2020

FY20/21 Q2 = October 2020 - December 2020

FY20/21 Q3 = January 2021 - March 2021

FY20/21 Q4 = April 2021 - June 2021

Support \rightarrow additional resources needed to complete the move

**italicized* \rightarrow to be completed if additional resources are available

Overview of Goals

Goal I

Work Towards Making South Pasadena a Plastic-Free City

> Plays: 3 Moves: 9 *Moves: 5

It is no longer enough to recycle our plastics – it's time to shift the focus on reducing them from the start.

Goal II

Enhance Water Conservation Projects and Programs

> Plays: 4 Moves: 16 *Moves: 1

Water is a precious resource in California and droughts are all too common. Identifying water waste and altering behaviors is key to conserving water.

Goal III Increase Organics

Diversion from Landfill

> Plays: 5 Moves: 10 *Moves: 6

With landfills filling up at an alarming rate, increasing diversion efforts is crucial. In 2018, one third of the 39 million tons of waste Californians disposed of were compostable organic materials.

Goal IV

Mitigate Impacts of the Urban Heat Island Effect

> Plays: 4 Moves: 6 *Moves: 5

The loss of vegetation causes urban areas to become warmer than their surrounding rural areas creating a heat island. These higher temperatures increase peak energy demand, air pollution, and heatrelated illness.

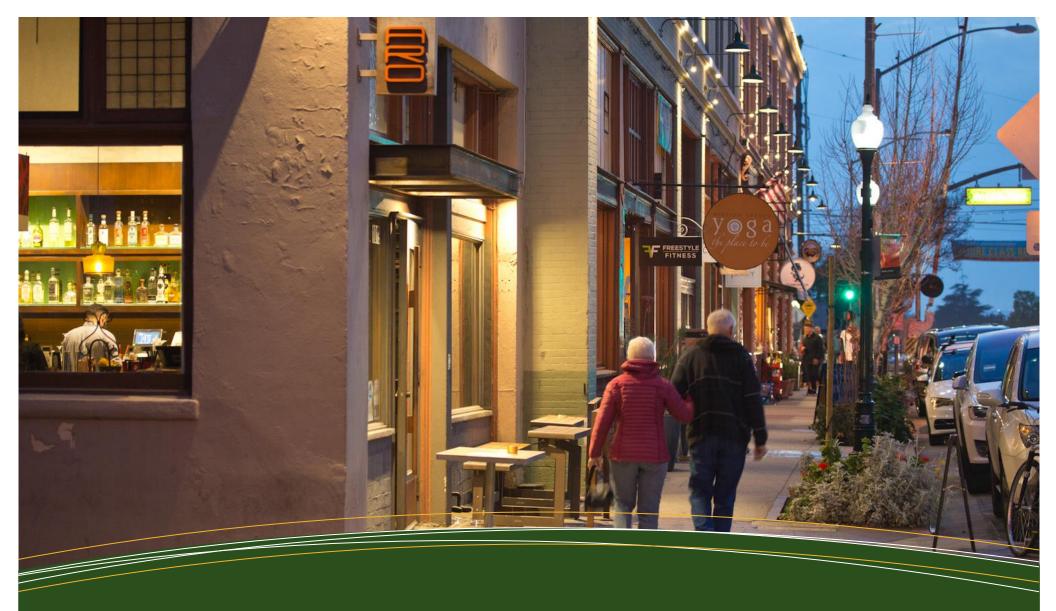

Goal V

Prepare for the Consideration of Future Sustainability Initiatives

*Moves: 5

To stay on top of the game, we must always look ahead.

GOAL I Work towards Making South Pasadena a Plastic-Free City

Play 1: Reduce use and sale of single-use plastics.

Move I.1.1: Update the City's Environmentally Preferable Purchasing (EPP) Policy to be adopted by all City Departments. A strong EPP policy eliminates over-ordering, reduces waste, and guides departments to purchasing local and ecofriendly options including recycled copy paper and compostable utensils.

Move I.1.2: Develop a plastic-free/zero-waste guide for City events. A zero waste guide will provide specific steps to City staff on how to set up a plastic-free/zero waste event. It should include instructions on how to reduce plastics, obtain organics bins, post educational signage, and other steps vendors and event coordinators can take to ensure that a minimal, if not zero, amount of plastic is used.

Move I.1.3: Explore the possibility of banning single-use plastics in food service stores. Start the conversation among business owners to raise awareness of the issues with single-use plastics. Work with City departments and Chamber of Commerce to gauge fiscal impact and outline a possible plan for implementation.

Play 2: Encourage the use of reusables by providing resources, education, and funding.

Move I.2.1: Seek funding to install more water bottle refill stations in public areas. Water bottle refill stations are being installed in public parks. It would be beneficial to have stations installed in other public buildings including the Library, City Hall, and the Senior Center; however, installation is costly. Explore funding sources for this project.

Move I.2.2: Create an informational pamphlet on plastic alternatives and distribute to businesses. There are several plastic alternatives on the market. An informational pamphlet that lists the alternatives and options on where to obtain them will help businesses begin their switch to plastic-free single-use items.

Move I.2.3: Create checklists for businesses and restaurants on ways they can reduce their plastic and distribute. Checklists provide clear steps.

Move I.2.4: Encourage businesses to participate in "Tap," the app that identifies their location as a free water-refill spot. Promote the app through communication channels. Consider offering shoutouts to participating businesses on social media.

Move I.2.5: Create a Recycle & Reuse Directory. Many residents want to do their part to recycle their materials or repair their broken items instead of purchase new ones, but don't know where to do so. This directory would provide that information.

*Move I.2.6: Provide mini-grants or loans to businesses who need a jump start to switching to alternatives. Explore funding sources to provide mini-grants to businesses that would help them with initial costs for switching to alternatives. Grants can be awarded to those most in need.

*Move I.2.7: Explore possibilities of establishing a beverage container recycling program in South Pasadena. With the closure of rePlanet and other recycling centers, residents have no where to go inside the City to recycle their beverage containers.

*Move I.2.8: Provide plastic reduction items to residents including reusable water bottles, utensils, containers, etc. These items will help raise awareness and provide education on actual steps people can take to reduce their plastic. It will provide them with the tools they need to reduce their plastic consumption.

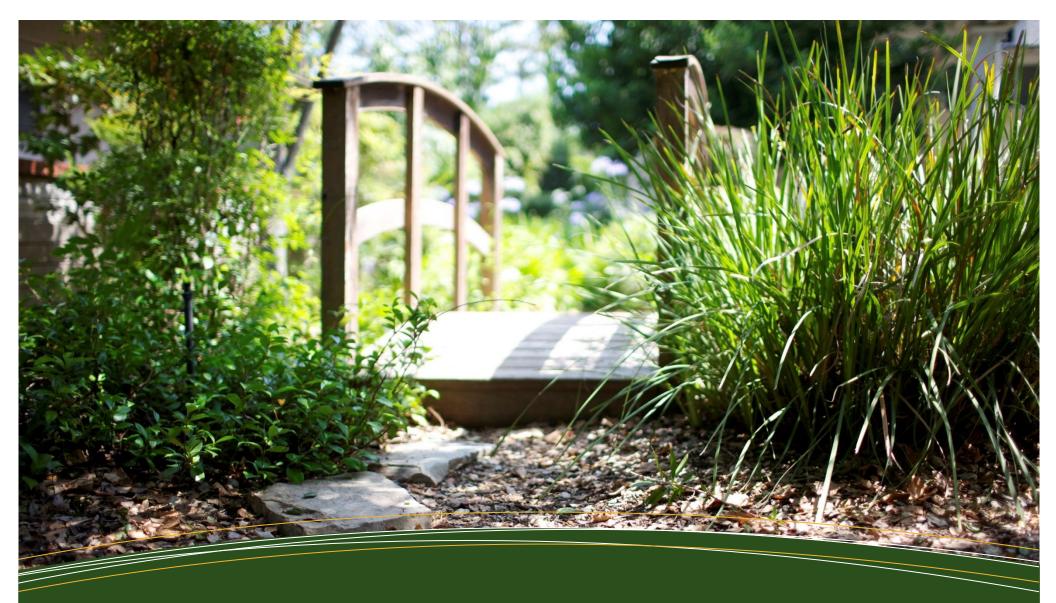

*Move I.2.9: Provide workshops for parents to teach them how to prepare zerowaste lunches. Work with SPB, SPUSD, and PTA to put together workshops for parents. This will help reduce waste in schools.

Play 3: Provide incentives and/or rewards for those actively working towards zero-waste.

Move I.3.1: Encourage businesses to reward customers and employees who bring in their own coffee mug, water bottles, to-go container, etc. Offering a small monetary incentive for customers and employees who bring in their own beverage containers will reduce plastic use and possibly reduce amount of supplies needed for the business.

*Move I.3.2: Explore ways to recognize businesses who are implementing zerwaste practices. Sustainable practices can be difficult to implement for businesses. Those businesses who implement them in spite of the difficulties should be recognized and/or rewarded. Recognition programs encourage greater participation among other businesses and raise awareness among patrons. Some methods include: green business certification program, green business awards, certificate of recognition from City Council, etc.

Goal I: Work Towards Making South Pasadena a Plastic-Free City								
MOVE	FIELD	PLAYERS	SCORE	CLOCK	SUPPORT

GOAL II Enhance Water Conservation Projects and Programs

Goal II: Enhance Water Conservation Projects and Programs

Play 1: Provide education and promote greywater systems.

Move II.1.1: Create an Integrated Water and Wastewater Resources Management Plan (IWWRMP). An IWWRMP will include an integrated plan for potable water, recycled/non-potable water, sewer, and stormwater management/services. It will identify project/facility maintenace and financial plans.

Move II.1.2: Evaluate the feasibility of implementing a greywater rebate program. Implementing a greywater system conserves water and reduces costs. Review City of Pasadena's program and evaluate the feasibility of implementing a similar program.

Move II.1.3: Work with South Pasadena Beautiful to promote a Garden Tour focusing on greywater systems. This will increase awareness and education. Consider incorporating this into City's Earth Day events.

Move II.1.4: Create informational materials on greywater systems. These materials should include the following information: what they are, how they save water, cost estimates, how to implement in South Pasadena (approvals, codes, etc.).

*Move II.1.5: Educate/train Building and Planning Department on greywater systems. Trainings will ensure that staff are up-to-date on requirements for greywater systems.

Play 2: Promote the use of water conservation devices.

Move II.2.1: Retrofit all water faucets in City facilities with low-flow aerators and post signage to raise awareness. Inventory all water faucets in City facilities and indicate current faucet's flow rate (gpm). Switch to low-flow aerators. Create and post stickers to raise awareness.

Move II.2.2: Evaluate the current water conservation program in respect to local vendor supplies. Determine how to incorporate a greater incentive for water conservation devices purchased within the City for the next fiscal year. Purchasing locally contributes to a smaller carbon footprint and keeps funds within our City.

Move II.2.3: Continue to offer businesses and residents free water conservation devices including low-flow aerators, showerheads, and hose nozzles. These devices go beyond behavioral changes and can provide actual water/cost savings.

Move II.2.4: Promote rebates offered by Metropolitan Water District on water conservation devices. Businesses and residents can get money back on their water conservation efforts.

Play 3: Provide educational materials and expert advice on water conservation practices.

Move II.3.1: Create checklists/pamphlets that give tips on how to conserve water at home, at work, and at school. Promotes awareness and provides education.

Move II.3.2: Partner with third party to offer water conservation assessments for homes and businesses. This will provide tailored feedback to residents and businesses and help with individual questions and concerns.

Play 4: Increase water conservation efforts outdoors.

Move II.4.1: Promote outdoor rebates offered by Metropolitan Water District (MWD) on outdoor water conservation devices and the turf removal program. Businesses and residents can get money back on their water conservation efforts. Promote through all communication channels including social media posts, City website, eNeighbors, etc.

Move II.4.2: Host workshops on turf removal and native plants. Explore other water-wise landscaping workshop possibilities. Turf Removal and Native Plant Workshops are offered through Upper San Gabriel Valley Municipal Water District. It is a great way to provide education and promote conservation efforts.

Move II.4.3: Promote rebates offered by the City on water efficient plants, native trees, drip irrigation, and sprinkler nozzles. Businesses and residents can get money back on their water conservation efforts. Promote through all communication channels including social media posts, City website, eNeighbors, etc.

Move II.4.4: Develop and promote an impervious surface removal rebate program. Removing impervious surface conserves water, captures stormwater, and replenishes the groundwater basin. Residents and businesses can get money back on their water conservation efforts. Promote through all communication channels.

Move II.4.5: Host a workshop on the Model Water Efficient Landscape Ordinance (MWELO). Coordinate with Metropolitan Water District (MWD) to bring their MWELO workshop to South Pasadena. This will be beneficial for Building and Planning staff, contracters, landscape architects, etc.

Move II.4.6: Where possible, incorporate green infrastructure design in roadway projects. Green infrastructure can include bioswales, bio infiltration systems, impervious pavement, etc.

Goal II: Enhance Water Conservation Projects and Programs

Move II.2.3: Continue to offer businesses and residents free water conservation devices including low-flow aerators, showerheads, and hose nozzles.	Commercial Residential	•	Public Works		Sign-up sheet	FY19/20 Q3			
Move II.2.4: Promote rebates offered by Metropolitan Water District on water conservation devices.	Commercial Residential	•	Public Works MWD		Promotion through communication channels	FY19/20 Q3			
Play 3: Provide educa	tional materi	als	and expert advice o	n wa	ater conservation practices.		-		
Move II.3.1: Create checklists/pamphlets that give tips on how to conserve water at home, at work, and at school.	All	•	Public Works PIO		Checklist Factsheet	FY20/21 Q2			
*Move II.3.2: Partner with third party to offer water conservation assessments for homes and businesses.	Commercial Residential		Public Works		Contract Promotion of program	FY19/20 Q4	Consultant		
Play	4: Increase	wat	ter conservation effo	orts	outdoors.				
Move II.4.1: Promote outdoor rebates offered by Metropolitan Water District (MWD) on outdoor water conservation devices and the turf removal program.	Commercial Residential	•	Public Works MWD PIO		Promotion through communication channels	FY19/20 Q3			
Move II.4.2: Host workshops on turf removal and native plants. Explore other water-wise landscaping workshop possibilities.	Municipal	•	Public Works Community Svcs Upper District		Turf Removal Workshop California Friendly Landscape Workshop	FY20/21 Q4			
Move II.4.3: Promote rebates offered by the City on water efficient plants, native trees, drip irrigation, and sprinkler nozzles.	Municipal	•	Public Works PIO		New rebate applications Promotion through communication channels	FY19/20 Q3			
Move II.4.4: Develop and promote an impervious surface removal rebate program.	Municipal	•	Public Works PIO		Rebate application Factsheet Promotion through communication channels	FY19/20 Q3			
Move II.4.5: Host a workshop on the Model Water Efficient Landscape Ordinance (MWELO).	Municipal	•	Public Works Chamber MWD		MWELO Workshop	FY20/21 Q1			
Move II.4.6: Where possible, incorporate green infrastructure design (such as bioswales) in roadway projects.	Municipal	•	Public Works		Green infrastructure in projects	FY20/21 Q4			

GOAL III Increase Organics Diversion from Landfill

Goal III: Increase Organics Diversion from Landfill

Play 1: Provide tools and education on how to avoid organics and food waste.

Move III.1.1: Connect restaurants and grocery stores with food donation

organizations. Organizations such as Food Forward and Urban Harvester collect edible food that would otherwise be thrown away. Connecting restaurants and grocery stores to these organizations and starting food collection will reduce food waste, increase landfill/organics diversion, and provide food for those in need. Once information is gathered, distribute among commercial sector.

Move III.1.2: Provide strategies on how to avoid offering foods that are rarely eaten. This will help raise awareness on food waste and could help reduce costs.

Move III.1.3: Provide education on AB1826 and the mandated requirements for organics diversion. All businesses producing 4 cubic yards or more of waste are required to implement organics collection services. This requirement will apply to residents in the near future. It is important to know that efforts to divert organics from landfill are mandated by the state.

Move III.1.4: Provide strategies on how to avoid food waste at home. This will help raise awareness on food waste and could help reduce costs.

*Move III.1.5: Explore ways to create a neighborhood food library/harvest. Many residents have fruit trees and gardens that produce a surplus of food. Creating a space where neighbors can come together to share the produce will reduce food waste and create a community bond.

*Move III.1.6: Provide strategies on how to avoid offering foods that are rarely eaten at school. This would be a resource for schools and could help reduce food waste as well as costs.

Play 2: Provide tools and education on how to compost individually.

*Move III.2.1: Host free composting workshops or promote workshops in neighboring cities. This will provide residents and business owners the knowledge they need to start composting at home, increasing diversion and reducing costs.

*Move III.2.2: Provide free or discounted composting bins to those who participate in workshops. This will help initiate on-site composting.

Play 3: Connect with local composting hubs.

Move III.3.1: Connect with local composting organizations and determine if partnerships are possible. Connecting with local organizations can provide the City with valuable resources on organics diversion and composting.

Move III.3.2: Explore ways to establish a composting hub in South Pasadena. A local composting hub would provide businesses and residents a place to take their organics that is nearby and free. Determine requirements for locations and consider staffing options including volunteers.

Move III.3.3: Provide information on local composting hubs that are accepting **compost**. Spreading the word on existing composting hubs will raise awareness and increase organics diversion.

*Move III.3.4: Determine if any schools would be capable of establishing a composting hub. Schools can make great central locations and are a great point of information and influence.

Play 4: Implement existing organics services.

Move III.4.1: Deploy organics bins at all City facilities where feasible. Work with Athens Services to deploy organics bins at City facilities where feasible. The City will set an example and raise awareness.

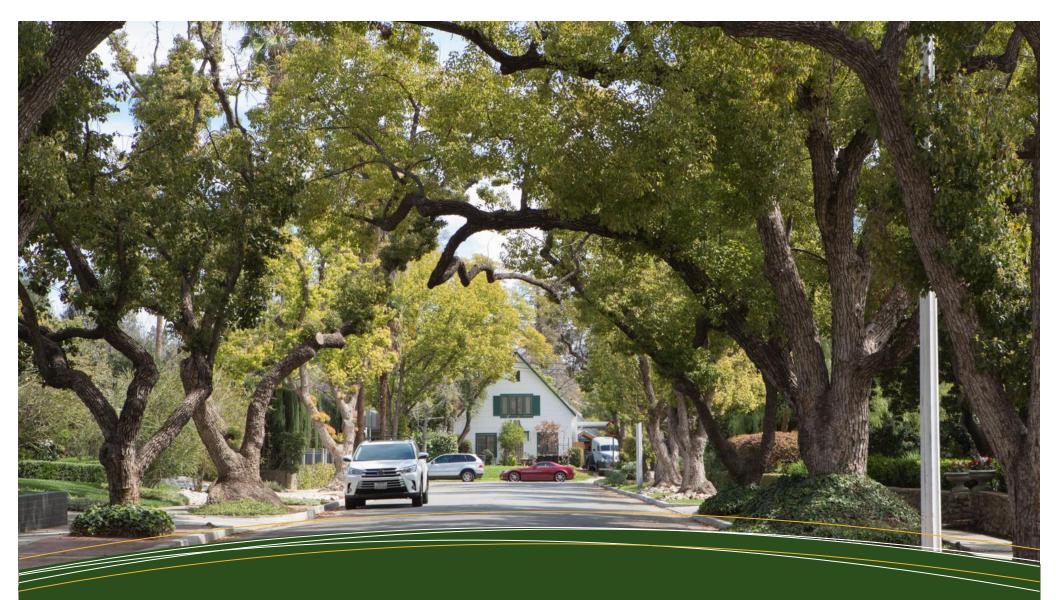

Move III.4.2: Educate staff and the public on what can and cannot be composted (i.e. create signage). Work with Athens Services to distribute flyers and signage for composting. Encourage City employees to be leaders in sorting organics.

Move III.4.3: Inform businesses via trash bill inserts and Chamber of Commerce of available organics services. Businesses that produce a large quantity of organics and cannot compost on site should implement Athens' organics services.

Play 5: Provide incentives/rewards for those actively working towards diverting organics.

*Move III.5.1: Explore ways to recognize businesses who are implementing organics diversion practices. Sustainable practices can be difficult to implement for businesses. Those businesses who do them in spite of the difficulties should be recognized/rewarded to encourage greater participation among other businesses and raise awareness among patrons. Some methods include: green business certification program, green business awards, certificate of recognition from City Council, etc.

Goal III: Incr	ease Org	anics Diversion f	rom Landfill

GOAL IV Mitigate Impacts of the Urban Heat Island Effect

Goal IV: Mitigate Impacts of the Urban Heat Island Effect

Play 1: Review and strengthen parking lot ordinances and/or enforcement if needed.

Move IV.1.1: Review parking lot codes and design standards and identify how they can be improved. Identify parking lot codes and review ways (if any) it addresses urban heat island effect. Discuss how existing codes can be improved to address urban hear island effect.

*Move IV.1.2: Educate/train Building and Planning Department on codes and ensure they are being enforced. Training staff will ensure enforcement of codes and will allow them to provide builders with information on current codes.

Play 2: Review and strengthen cool roof ordinances and/or enforcement if needed.

Move IV.2.1: Review cool roof codes and design standards and identify how they can be improved. Identify cool roof codes and review ways (if any) it addresses urban heat island effect. Discuss how existing codes can be improved to address urban hear island effect.

*Move IV.2.2: Educate/train Building and Planning Department on codes and ensure they are being enforced. Training staff will ensure enforcement of codes and will allow them to provide builders with information on current codes.

Play 3: Provide education and create resources for contractors, builders, property owners, etc.

Move IV.3.1: Create list of heat-tolerant and native shade trees and distribute. A list of fast-growing native shade trees would provide contractors and builders guidance when constructing parking lots.

*Move IV.3.2: Create informational materials (brochures, checklists, etc.) that clearly explain parking lot ordinances and how to comply. These materials will increase awareness and provide simple information.

*Move IV.3.3: Create informational materials (brochures, checklists, etc.) that clearly explain cool roof ordinances and how to comply. These materials will increase awareness and provide simple information.

Play 4: Increase the City's tree canopy and continue supporting tree education.

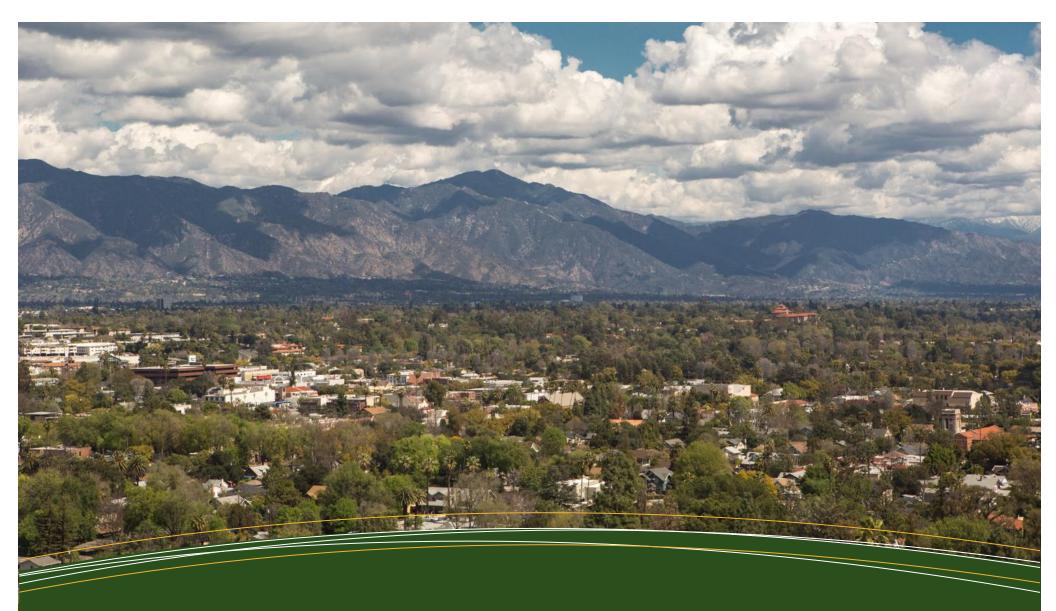

Move IV.4.1: Review the City's tree ordinance and identify how it can be improved. The tree ordinance ensures that trees in the City are protected. The ordinance should be reviewed to identify ways that it may be improved.

Move IV.4.2: Determine possibility of planting more trees near public transportation stops. Trees help mitigate the urban heat island effect.

Move IV.4.3: Update educational materials on tree watering and distribute among sectors. Distribute via South Pasadena Beautiful's outreach events and communication channels.

*Move IV.4.4: Create an Urban Forest Management Plan (UFMP). An Urban Forest Management Plan will include inventories and assessments of the current status of the urban forest and a strategic plan for implementing and monitoring the City's urban forest vision. It will enable City staff to more effectively maintain and increase the City's tree canopy.

GOAL V Prepare for the Consideration of Future Sustainability Initiatives

Goal V: Prepare for the Consideration of Future Sustainability Initiatives

The South Pasadena Green Action Plan is only the beginning. The moves in this plan are just a few of the steps the City is committed to take towards sustainability. The following initiatives are important to the City and are on deck to be implemented.

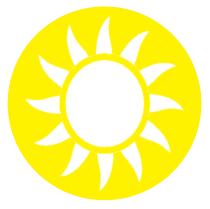

*Move V.1: Review the feasibility of the Renewable Energy Council's recommendations as outlined in their 2016 report, "A Clean Energy Pathway for South Pasadena."

*Move V.2: Evaluate the feasibility of banning gas-powered lawn equipment including leaf blowers.

*Move V.3: Establish a sustainability-focused group to spearhead the implementation of sustainability initiatives and practices in the commercial sector.

*Move V.4: Establish a sustainability-focused group to spearhead the implementation of sustainability initiatves and practices in South Pasadena schools.

*Move V.5: Create a physical and/or virtual space focused on sustainability education and available to all South Pasadena residents.
