In the 1940's, covenants that restricted the sale of property to ~~Whites or Caucasians~~white people only were prevalent in the City, especially on residential properties. Although such covenants were declared unconstitutional and have not been enforceable since 1948, many remain on recorded property deeds. Furthermore, there may still be racially restrictive covenants on properties owned by the City of South Pasadena. In compliance with City Council Resolution No. 7750, the "Sundown Town" Resolution, adopted on February 2, 2022, the City will review the deeds of all City-owned properties and remove any existing racially restrictive housing covenants found on them. In the future, any property purchased will require removal of any racially restrictive housing covenant prior to recording the property in the City's name. Additionally, a new State law (AB 1466), gives property owners the opportunity to remove racially restrictive covenants from their own deeds. Beginning on July 1, 2022, county recorders must provide a Restrictive Covenant Modification form to every person purchasing a property with a restrictive covenant, and establish an implementation plan to identify unlawful restrictive covenants in the records of their office. The City will develop a program to support and encourage individual property owners to remove such restrictions from their deeds and provide information about accessing the County process to do so. The City will use its social media platforms, website and other communications tools to conduct outreach and provide information at community events to assist homeowners to identify and remove restrictive covenants.

Eight-year Objective: Remove all racially restrictive covenants from South Pasadena City-owned properties by June 2023 and from privately-owned properties by the end of the planning period. Advertise County program as soon as the County releases details in 2022; launch website and social media campaigns to support property owners to voluntarily remove these covenants by December 2022, with ongoing reminders in City publications and at City events. Support County enforcement of this State requirement as appropriate through City actions. Work with at least 10 property owners annually to support their efforts to remove restrictions from their deeds.

Responsible Agency: Community Development Department; Los Angeles County Recorder

Funding Source: General Fund; grants if offered through a State or County program

Timeframe: Remove all covenants on City-owned properties by June 2023; launch informational campaign between June and December ~~2022~~2023; encouragement of removal from private properties: ongoing.

GOAL 6.0 Expand and strengthen tenant protections for South Pasadena's existing renters

South Pasadena renters are important members of the community and make up about 53.5% of the city's population. The City's efforts to advance housing that is affordable to people of all income levels must include not only longer-term strategies like facilitating housing production, but also policies and programs that help South Pasadena's existing renters remain in (or return to) their homes and their broader community. To that end, the City is committed to ensuring that all of its renter households maintain housing stability and affordability so that they can stay and thrive in South Pasadena.

Policy 6.1 Collect and monitor data on South Pasadena's affordable and market rate rental housing stock, including the rents, tenancy, and affordability details of certain rental units.

Policy 6.2 Provide information on applicable state and local tenant protections to both landlords and tenants.

Policy 6.3 Establish and/or strengthen local tenant protections to mitigate or prevent housing instability and displacement of South Pasadena residents who rent their homes.

Program 6.a – Rent Registry

Staff will research, develop, and propose to City Council a local rent registry program. A rent registry program would require owners of certain, to-be-determined, rental property types (those with a minimum number of units, for instance) to register their units and pay a per-unit registration fee on an annual basis. Staff envision the rent registry serving initially as a database that the City would use to collect and track rental data on units, including affordable units, and to disseminate information to property owners about tenant protections. However, the utility of the rent registry could be expanded over time to incorporate additional monitoring, compliance, and enforcement activities as new programs are established and linked to it. Staff will draw from thorough analysis to develop the details of the program, which will be subject to the approval of City Council.

Eight-year Objective: City will have a comprehensive online database of all affordable and market-rate rental housing units in South Pasadena subject to the registration requirement with a user interface and fee payment system for rental property owners. The registry will be updated annually and serve as a streamlined platform for Community Development staff to track the City's rental housing inventory and provide information to rental housing property owners. City will decide whether to link this registry to the administration of other activities and programs.

Funding Source: General fund (staff time for development and administration); registration fees from property owners

Responsible Agency: Community Development Department (Housing Division)

Timeframe: Propose policy to City Council by February 2024. Complete development of rent registry by 2025. Begin implementation of rent registry by 2026.

Program 6.b – Right to Return Policy

Local and regional housing and tenants' groups have raised concerns about the displacement of tenants in South Pasadena, and across Los Angeles County, due to renovation work initiated by the landlord. To address these concerns, staff will research, develop, and propose to City Council a policy that establishes a tenant's legal right to return to a property at a comparable rent after eviction and/or relocation due to substantial remodel or other just cause reasons. The details of such a policy will be informed by rigorous research of local examples, community input, and careful legal analysis.

Eight-year Objective: In qualifying circumstances, all tenants who are temporarily displaced from their units due to construction work and wish to return upon completion will be able to do so under the law. Thus, this policy will stem permanent the permanent displacement of renters from South Pasadena due to just cause no-fault evictions and/or relocation for certain reasons.

Responsible Agency: Community Development Department (Housing Division); contracted landlord-tenants law organization

Funding Source: General fund (staff time to develop the program)

Timeframe: Propose policy to City Council as part of a broader tenant protections ordinance by December 2023.

Program 6.c – Relocation Assistance

In 2019 and 2021, in response to the COVID-19 pandemic, City Council passed two urgency just cause ordinances that require the landlord to pay relocation assistance to the tenant when evicting the tenant for a just cause no-fault reason. Beyond South Pasadena, cities across Los Angeles County have their own relocation assistance requirements for just cause evictions, which commonly require the landlord to pay at least 2.5 times the Fair Market Rent or current rent in addition to an allowance for moving expenses. Some cities, like Los Angeles and Pasadena, also have requirements for the landlord to pay temporary relocation assistance to a tenant when certain types of work require the tenant to temporarily vacate the unit. Staff will review the urgency just cause ordinances, perform more thorough research and analysis, and draft and propose to City Council a new permanent ordinance with permanent and temporary relocation assistance requirements for just cause no-fault evictions and temporary relocation for certain reasons.

Eight-year Objective: South Pasadena renters will have local tenant protections that reduce the financial burden placed on tenants when they are (temporarily or permanently) displaced from their homes for legally permitted reason and instead place financial obligations onto the property owners.

Responsible Agency: Community Development Department (Housing Division); contracted landlord-tenants law organization

Funding Source: General fund (staff time to develop the program); property owners

Timeframe: Propose policy to City Council by December 2023.

Program 6.d – Rent Stabilization

Staff will research, develop, and propose to City Council a rent stabilization policy to protect South Pasadena's renters of certain properties from excessive rent increases that undermine housing affordability and stability. A local rent stabilization program would establish a lower cap on rent increases than that set in the Tenant Protection Act pursuant to AB 1482 to the extent permitted by the Costa-Hawkins Rental Housing Act, which prohibits cities from applying rent stabilization to certain properties, including single-family homes, condos, and properties built after 1995.

Eight-year Objective: Reduce high rent burdens and forced moves among South Pasadena's renters due to excess rent increases and, in turn, increase their financial security and housing stability.

Responsible Agency: Community Development Department (Housing Division); contracted landlord-tenants law organization

Funding Source: General fund (staff time to develop the program)

Timeframe: Propose policy to City Council by December 2023.

6.8.2 Summary of Quantified Objectives

The quantified objectives for the 2021-2029 Housing Element Planning period reflect the provision of sites for development of new housing and for rehabilitation and preservation. The quantified objectives are described by income category in Table VI-56.

Table VI-56
QUANTIFIED HOUSING IMPLEMENTATION SUMMARY

INCOME CATEGORY	NEW CONSTRUCTION	PRESERVED[1]	REHABILITATED[1]
Extremely Low/Very Low Income	757	7	8
Low Income	398	24	8
Moderate Income	334	4	9
Above Moderate	578	6	10
Total	2,067	41	35

1. Note that no housing units have been identified as at risk of conversion to market rate in South Pasadena within 10 years of the beginning of the 6th-cycle planning period, however there are preservation and rehabilitation needs in the community, therefore units have been included in both columns. The number of units is based the quantified objectives in Program 1.c, 2.c, and 2.d.

SITES TO ADDRESS THE LOWER-INCOME RHNA OR WITH PENDING OR APPROVED APPLICATIONS

1. Vacant Site

This site is vacant.

Parcel Number	5311003096
Site Size (acre)	1.05 acres
Current General Plan Land Use	Business Park/Research & Development
Current Zoning	BP
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Ostrich Farm Zone
Proposed General Plan Land Use	Ostrich Farm Mixed Use with Housing Opportunity Site
Vacant or Non-Vacant	Vacant
Density or Proposed Density (units per acre)	70 du/ac.
Realistic/Net Units	70 lower-income units
Property Owner or Developer Interest in Residential Development?	Yes - Verbal communication between City staff and property owner representative; Property owner representatives requested meeting with City (7/28/21 and 8/9/21 meetings to discuss potential housing proposal).
Environmental Constraints	No known environmental constraints.

2. Business and Research Park parking lot site

Existing use is as a business park with offices and large surface parking areas. The site is underutilized given the large parking lot and proposed density. Bullseye Glass and Judson Studios (southwestern-most buildings) are relatively new tenants.

Parcel Number	5311004010
Site Size (acre)	2.23 acres
Current General Plan Land Use	Business Park/Research & Development
Current Zoning	BP
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Ostrich Farm Zone
Proposed General Plan Land Use	Ostrich Farm Mixed Use
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	~~60~~ 70 du/ac.
Realistic/Net Units	50 lower-, 20 moderate-, 13 abovemoderate-income units= 83 total units
Property Owner or Developer Interest in Residential Development?	Staff held a phone call with the property owner to discuss the General Plan update, which would upzone the property to accommodate more housing units. The property owner was interested in future development based on the potential residential density that was discussed.Property owner was supportive of rezoning for potential for multi-family residential development in the planning period. Developer interest in site.
Environmental Constraints	No known environmental constraints.

3. Monterey Road site

Underutilized parcels each with one single-family home on it. All three parcels have the same owner. Owner is interested in the development of housing and has submitted an application for a total of 8 market-rate units on the three parcels.

Parcel Numbers	5311015035, 5311010001, 5311010002
Site Size (acre)	5311015035 – 0.34 acres, 5311010001 - 0.33 acres, 5311010002 – 0.59 acres = 1.26 acres total
Current General Plan Land Use	Medium-Density Residential
Current Zoning	RM
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	RM with Affordable Housing Overlay
Proposed General Plan Land Use	Medium-Density Residential with Affordable Housing Overlay
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	30 du/ac.
Realistic/Net Units	8 above moderate-income units
Property Owner or Developer Interest in Residential Development?	Yes, both Property Owner and Developer Interest. Property owner has submitted an application for residential development.
Environmental Constraints	Rear portion of the site is significantly sloped.

4. Tyco site

Existing uses include parking lots and underutilized industrial buildings. All parcels have the same owner. Owner is interested in consolidating the parcels and developing a few hundred units of high-density housing on the site.

Parcel Numbers	5313011007, 5313011009, 5313011010, 5313011012, 5313011013
Site Size (acre)	5313011007 – 0.89 acres, 5313011009 – 0.34 acres, 5313011010 – 0.24 acres, 5313011012 – 1.00 acres, 5313011013 – 0.80 acres =3.26 acres total
Current General Plan Land Use	Business Park/Research & Development
Current Zoning	BP
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Ostrich Farm Zone
Proposed General Plan Land Use	Ostrich Farm Mixed-Use with Housing Opportunity Site
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	70 du/ac.
Realistic/Net Units	130 lower-, 57 moderate-, 30 above moderate-income units = 217 total units
Property Owner or Developer Interest in Residential Development?	Yes. Staff held a phone call with the property owner to discuss the General Plan update, which would upzone the property to accommodate more housing units. The property owner was interested in future development based on the potential residential density that was discussed. Owner/Developer interested in building over 300 units during the planning period.
Environmental Constraints	No known environmental constraints.

5. Liquor store site

Existing use is liquor store. Underutilized site with surface parking and proposed density. The structure is 50-60 years old. There have been no planning/building permits applied for or issued for this site over the past ten years, indicating that there have been no major investments in the structure.

Currently, improvements on the site include an approximately 5,500 square foot retail building, and approximately 10,000 square feet of parking that includes 17 parking spaces. As shown below, the site can accommodate 31 housing units. The proposed Ostrich Farm Mixed-Use zoning will allow for up to 8,500 square feet of retail development in additional to the residential development shown. It is anticipated that redevelopment of the site to residential mixed-use will significantly increase the site's value over the existing use.

A question about this site was presented to developers during the City's developer forum, where the participants identified this site as "moderately likely" to be redeveloped. The judgement of the likelihood of redevelopment was made in comparison to other sites presented to the developer forum, all of which were in the Downtown Specific Plan area, and based on the shape of the site.

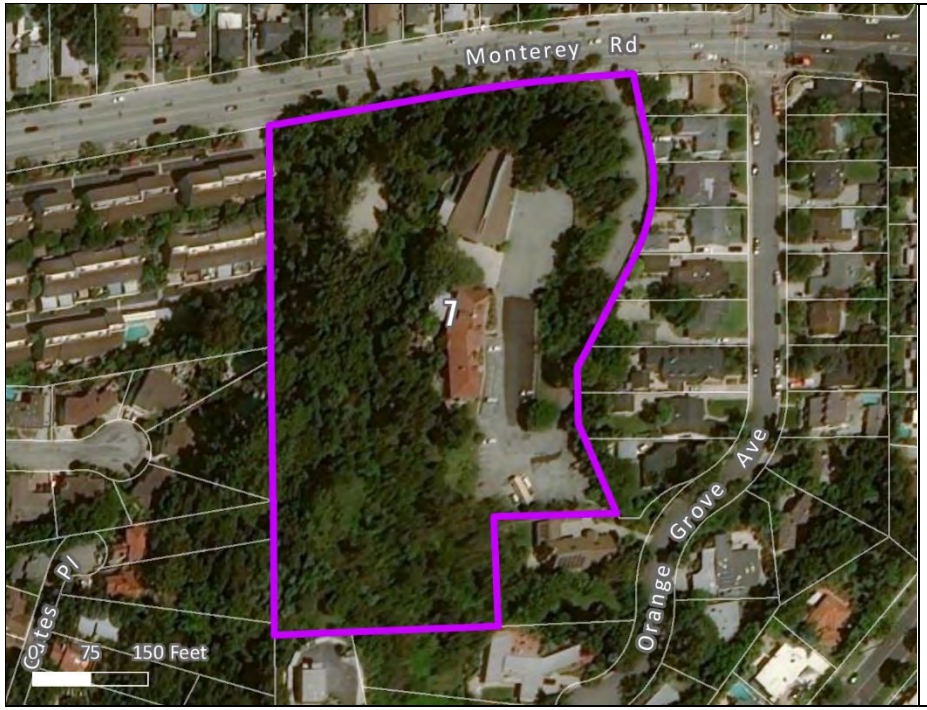
Parcel Number	5311012019
Site Size (acre)	0.55 acres
Current General Plan Land Use	General Commercial
Current Zoning	CG
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Ostrich Farm Zone
Proposed General Plan Land Use	Ostrich Farm Mixed-Use
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	60 du/ac.
Realistic/Net Units	19 lower-, 8 moderate-, 4 above moderate-income units = 31 total units
Property Owner or Developer Interest in Residential Development?	No response from the property owner. No expressed interest from any developers.
Environmental Constraints	No known environmental constraints.

6. Arroyo Vista Inn site

Existing use is a bed & breakfast inn. Owners are interested in affordable housing development on the portions of the site close to Monterey Road, retaining the existing buildings. Close to transit and amenities. The site was recently subdivided into three parcels. The housing potential is on the right-hand parcel and only on the street-facing third of the parcel. The owner has submitted an application for residential units on this parcel.

Parcel Number	5311012040
Site Size (acre)	5311012040 – 0.94 acres
Current General Plan Land Use	Estate & Very Low Density Residential
Current Zoning	RE
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	RL with Affordable Housing Overlay
Proposed General Plan Land Use	Very Low Density Residential with Affordable Housing Overlay
Vacant or Non-Vacant	Vacant
Density or Proposed Density (units per acre)	30 du/ac.
Realistic/Net Units	7 above moderate-income units
Property Owner or Developer Interest in Residential Development?	Yes. Letter and Meetings with Property Owners for Housing Development during the planning period
Environmental Constraints	Rear portion of the site is significantly sloped.

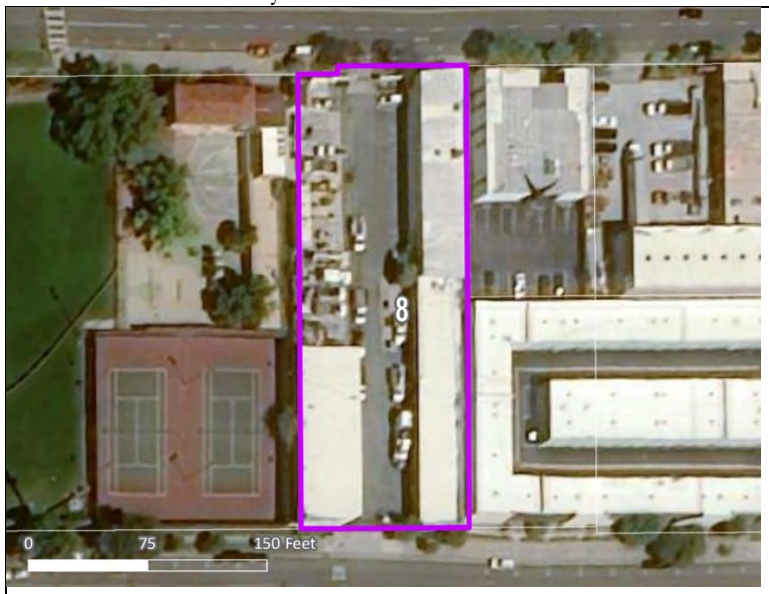
7. Methodist Church site



Existing use is church buildings, parking lot, and open space/undeveloped area. The church that owns the property has been studying different scenarios for developing the site further to incorporate housing, including affordable housing units. The existing church building and historic community room building and parking lot would be retained along with some areas of slopes, but other areas of the site are underutilized and could easily accommodate housing development. Without these constraints, the site could accommodate 100 units. However, based on the constraints of the site, including the topography, historic resources, and intention of the property owner, it is anticipated that the site will reasonably accommodate 30 lower income units.

Parcel Number	5314003083
Site Size (acre)	6.65 acres
Current General Plan Land Use	Community Facilities
Current Zoning	CF
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	CF with Affordable Housing Overlay
Proposed General Plan Land Use	Civic with Affordable Housing Overlay
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	30 du/ac.
Realistic/Net Units	30 lower-income units
Property Owner or Developer Interest in Residential Development?	Yes. Meetings with property representatives and architects in response to their interest in developing 30 housing units during the planning period.
Environmental Constraints	Site has significant topography and the property owner intends to keep the existing uses.

8. Public works yard site



~~Existing use is the City public works yard.~~ This property is owned by the City. Existing use is the City public works yard, with three distinct uses on site: offices, material storage, and vehicular storage. The City commits to relocating these uses during the planning period. The office uses will relocate to City Hall, the material storage uses will relocate and be combined with existing material storage located adjacent to the South Pasadena Dog Park on Stoney Drive, and the Public Works Department will purchase or lease a secured warehouse building for vehicular storage in South Pasadena or a neighboring community.

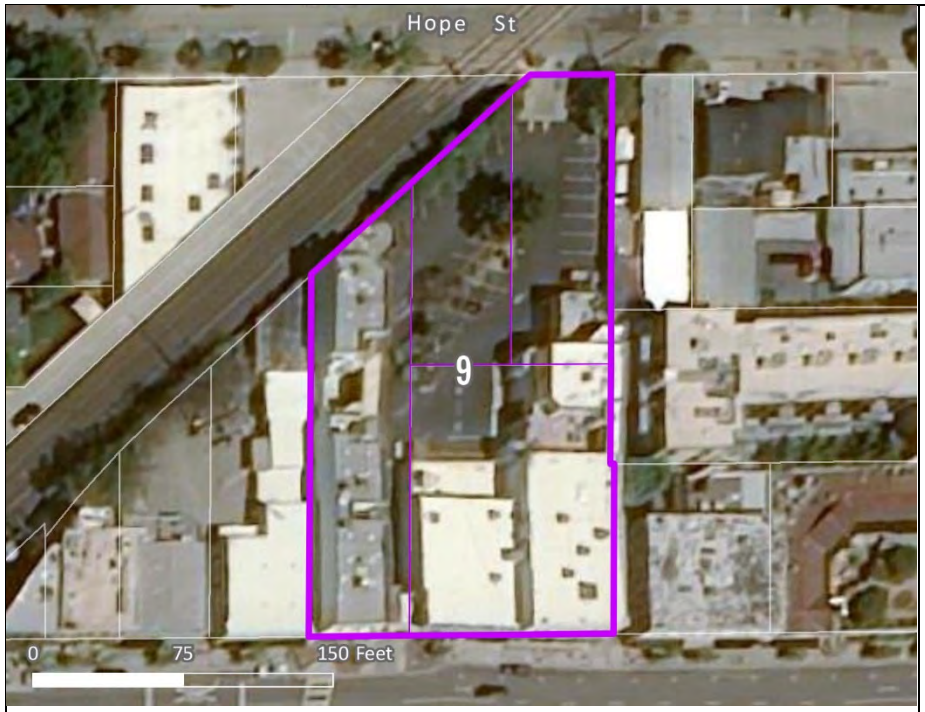
This site is centrally located near transit and services. ~~The current CIP includes a comprehensive assessment of City-owned facilities that may be suitable for relocation of the public works yard, in order to vacate the property for an affordable housing project.~~ Once vacated, the City will make this site available for a 100% affordable housing development. This property is included in Program 2.l for developing City-owned sites with affordable housing.

The site inlcudes ~~There is~~ an underground gasoline tank and filling station on site that will be removed prior to redevelopment of the site. As part of the redevelopment, an environmental site assessment will be conducted to determine if any environmental remediation is required. However, there is currently no indication that remediation will be required. The underground gas tank is inspected regularly and no leaks have been detected. Any necessary remediation identified in the environmental site assessment will be conducted by the City prior to redevelopment of the site. It is not anticipated that the testing or remidation of the site, if required, will present significant constraint on redevelopment of the site, as this type of testing and remediation is common on many previously developed parcels. Site with soil contamination are generally remediated through the excavation and export of contaminated soil during the grading process.

Parcel Number	5315020901
Site Size (acre)	0.71 acres
Current General Plan Land Use	Mission Street Specific Plan
Current Zoning	MSSP
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Mission Street
Proposed General Plan Land Use	Downtown Mission
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	Maximum density 70 du/ac. Minimum density 60 du/ac.
Realistic/Net Units	42 lower- -income units = 42 total units

Property Owner or Developer Interest in Residential Development?	Yes, City-owned and replacement yard options identified.
Environmental Constraints	The site contains an existing gasoline filling station and underground storage tank. Potental soil contamination may impact timeframe and cost of redevelopment.

9. Meridian site



Existing use is retail commercial buildings and parking lots behind. All four parcels have the same owner. The owner is interested in consolidating the four parcels, adaptive reuse of historic storefront, and developing residential uses on this site. There is potential for redevelopment of the site based on underutilized surface parking, recent project trends and active economic reinvestment in the area. This site is centrally located near transit and services. The property owner's plan to redevelop will be made more feasible by the proposed programs in this housing element, the DTSP, and height increases based on the density bonus and/or changes to the height maximum initiative.

Parcel Numbers	5315014030, 5315014032, 5315014033, 5315014044
Site Size (acre)	5315014030 – 0.23 acres, 5315014032 – 0.16 acres, 5315014033 – 0.13 acres, 5315014044 – 0.31 acres= 0.83 acres total
Current General Plan Land Use	Mission Street Specific Plan
Current Zoning	MSSP
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Mission Street (adjacent to the track)
Proposed General Plan Land Use	Housing Opportunity Site
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	70 du/ac.

Realistic/Net Units	34 lower-, 15 moderate-, 8 above moderate-income units = 57 total units
Property Owner or Developer Interest in Residential Development?	Yes. Meeting and site visit with owner representative and City staff
Environmental Constraints	No known environmental constraints.

10. School District site

The property contains a historic school district building, but the majority of the property is a surface parking lot. This site is identified in the current adopted South Pasadena Housing Element. In 2021, the South Pasadena Unified School District sold the property to a developer. The current property owner has proposed a mixed-use project that includes retail, 89 market rate residential units, 19 moderate-income residential units, and adaptive reuse of the historic school administration building for commercial uses. The developer submitted the project in September 2021 and it received final approval from the Planning Commission on September 13, 2022. The units assigned to this site are based on the approved application. This site is centrally located near transit, schools and services.

Parcel Number	5315008047
Site Size (acre)	1.90 acres
Current General Plan Land Use	Mission Street Specific Plan
Current Zoning	MSSP
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Mission Street
Proposed General Plan Land Use	Downtown Mission
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	50 du/ac.
Realistic/Net Units	19 moderate-income and 89 above moderate-income units = 108 total units
Property Owner or Developer Interest in Residential Development?	Yes, application received and approved.
Environmental Constraints	No known environmental constraints.

11. Carrow's site

Existing use is Carrow's restaurant with surface parking. An application for a mixed-use project, utilizing the State Density Bonus, with 50 units (5 affordable units) and 3,769 square feet of commercial area was submitted on February 8, 2021 and approved by Planning Commission on April 18, 2022. The application was submitted prior to the effective date of the inclusionary housing ordinance, and as such was not subject to its provisions.

Parcel Number	5315009051
Site Size (acre)	0.81 acres
Current General Plan Land Use	Mission Street Specific Plan
Current Zoning	MSSP
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Mission Street
Proposed General Plan Land Use	Downtown Mission
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	50 du/ac.
Realistic/Net Units	5 lower- and 45 above moderate-income units = 50 total units
Property Owner or Developer Interest in Residential Development?	Yes. Application under review; unit count based on current application
Environmental Constraints	No known environmental constraints.

12. El Centro St. and Edison Ln. Site

Existing use is a moderately used parking lot. The west parcel of the two parcels is owned by the City. Parking would be underground if the site is developed for housing. When developed, the project would need to provide at least 3 commercial spaces for the bank east of this site. The entire site is identified in the current adopted South Pasadena Housing Element. This site is centrally located near transit and services.

Parcel Numbers	5315003044, 5315003901
Site Size (acre)	5315003044 – 0.37 acres and 5315003901 – 0.19 acres= 0.56 acres total
Current General Plan Land Use	General Commercial
Current Zoning	CG
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Mixed-Use
Proposed General Plan Land Use	Downtown Fair Oaks
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	60 du/ac.
Realistic/Net Units	20 lower-, 8 moderate-, 4 above moderate-income units = 32 total units
Property Owner or Developer Interest in Residential Development?	The smaller, west parcel is City-owned. Although no response was received from the property owner of the east parcel, the City will continue efforts to consolidate the parcels to develop a housing project.
Environmental Constraints	No known environmental constraints.

13. City-Owned Parking Lot site

Existing use on the three northern parcels is a parking lot and a small theatre building. The City has a short-term lease in place with the theater becaue the goal is to develop a 100% affordalbe housing development on this site. The lease was amended in 2022 so that it is a month-to-month lease that expires on March 31, 2024. These lease amendments were made to allow the City to redevelop the site into residential uses. Those three parcels are owned by the City. There has been recurring interest from developers over the years for senior affordable housing development. The fourth parcel at the south end of the site could be consolidated with the other three parcels to develop as one site. There is one single-family residence on the existing site. It is not occupied by a lower-income household. The owners are interested in their property redeveloping together with the City-owned parcels as multifamily affordable units. The City plans to issue an RFP for development of housing on this site.

Parcel Numbers	5315003903, 5315003904, 5315003902, 5315003035
Site Size (acre)	5315003903 – 0.18 acres, 5315003904 – 0.12 acres , 5315003902 – 0.12 acres, 5315003035 – 0.19 acres = 0.61 acres total
Current General Plan Land Use	General Commercial
Current Zoning	CG
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Mixed Use
Proposed General Plan Land Use	Downtown Fair Oaks
Vacant or Non-Vacant	1 parcel Vacant, 2 parcels Non-Vacant
Density or Proposed Density (units per acre)	60 du/ac.
Realistic/Net Units	36 lower- -income units = 36 total units
Property Owner or Developer Interest in Residential Development?	Yes, Three parcels are city-owned and the owners of the fourth parcel are interested in their parcels being consolidated with the city parcels and all four parcels redeveloping together for multifamily residential development during the planning period.
Environmental Constraints	No known environmental constraints.

~~14. Oxley site~~

~~These are two adjacent parcels with the same owner. The owner has confirmed to the City that they are interested in redeveloping their parcels for multi-family housing. Currently, each parcel has one single-family home on it. They are not currently occupied by lower-income households.~~

~~Parcel Numbers~~	~~5315003033, 5315003032~~
~~Site Size (acre)~~	~~5315003033 – 0.18 acres, 5315003032 – 0.22 acres = 0.42 acres total~~
~~Current General Plan Land Use~~	~~General Commercial~~
~~Current Zoning~~	~~CG~~
~~Rezoning or Change to Land Use Required?~~	~~Yes~~
~~Proposed Zoning~~	~~Mixed Use~~
~~Proposed General Plan Land Use~~	~~Downtown Fair Oaks~~
~~Vacant or Non-Vacant~~	~~Non-Vacant~~
~~Density or Proposed Density (units per acre)~~	~~60 du/ac.~~
~~Realistic/Net Units~~	~~14 lower , 5 moderate , 4 above moderate income units = 23 total units~~
~~Property Owner or Developer Interest in Residential Development?~~	~~Yes, property owner is interested in redevelopment with multifamily residential during the planning period.~~
~~Environmental Constraints~~	~~No known environmental constraints.~~

~~15.~~14. Shaker's site

Existing use is a small restaurant, Shaker's, with substantial surface parking. This is a strong site for redevelopment for housing, and could incorporate the existing or a replacement restaurant and possibly other ground floor commercial uses. Staff has held multiple meetings with the property owner and property owner's representative, who are very interested in developing the site with a high-density housing/mixed-use project. Redevelopment of the site will require a Historic Resources Evaluation (HRE) report for demolition. This site is centrally located near transit and services.

Parcel Number	5315001070
Site Size (acre)	0.85 acres
Current General Plan Land Use	General Commercial
Current Zoning	CG
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Fair Oaks
Proposed General Plan Land Use	Downtown Fair Oaks
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	~~70~~ 110 du/ac.
Realistic/Net Units	~~33~~ 46 lower-, ~~15~~ 23 moderate-, ~~8~~ 23 above moderate-income units = ~~56~~ 92 total units
Property Owner or Developer Interest in Residential Development?	Yes. Owner representatives have met several times with City staff.
Environmental Constraints	No known environmental constraints.

~~16.~~15. Pavilions parking lot site

Existing use is a supermarket (Pavilions) with a large surface parking lot with the commercial use set back from the street. Although ~~currently undergoing a~~recently remodeled to update the store, the owner has informed the City that they are also developing a proposal to redevelop the property with underground parking, a new market and high density housing on upper levels at the maximum that would be allowed by City zoning, and would include affordable housing units. The ~~current~~ recent renovations are minor in nature and would not preclude redevelopment of the site. The project would be similar to others that the owner has implemented in other locations throughout the state.

Unit assumptions for this site assumed 75 percent of maximum development capacity as a mixed-use development that would include the grocery store use as well as housing. This site is centrally located near transit and services and schools.

In a February 2022 meeting with Community Development staff, the property owners provided a proposed mixed-use project description with high density residential, at the highest capacity allowed by Code using density and height bonuses, and a new market of similar size to the existing. Their continuing interest in a project of this scale was confirmed in a December 2022 letter and was reitterated at the February 1, 2023 City Council meeting during public comments.

Parcel Number	5319002034
Site Size (acre)	2.67 acres
Current General Plan Land Use	General Commercial
Current Zoning	CG
Rezoning or Change to Land Use Required?	Yes
Proposed Zoning	Fair Oaks
Proposed General Plan Land Use	Downtown Fair Oaks
Vacant or Non-Vacant	Non-Vacant
Density or Proposed Density (units per acre)	~~70~~ 110 du/ac.
Realistic/Net Units	~~80~~ 110 lower-, ~~30~~ 55 moderate-, ~~23~~ 55 above moderate-income units = ~~133~~ 220 total units
Property Owner or Developer Interest in Residential Development?	Property owner interest expressed to City staff in higher density housing redevelopment during the planning period.
Environmental Constraints	No known environmental constraints.

~~17. Retail and restaurant buildings and parking lot site~~

~~Existing use is a retail center that includes a resturant located along a portion of the street frontage, a two-story building in rear, and surface parking in the center of the site and along the remainder of the street frontage. There is potential for redevelopment of the site based on recent project trends and active economic reinvestment in area. This site is centrally located near transit and services. There are existing leases on the site with varying termination dates during the planning period. Approximately one quarter of the rear building is vacant. All of the leases include early termination clauses. The property owner has expressed interest in redevelopment of the site to City staff.~~

~~Parcel Number~~	~~5319003029~~
~~Site Size (acre)~~	~~0.89 acres~~
~~Current General Plan Land Use~~	~~General Commercial~~
~~Current Zoning~~	~~CG~~
~~Rezoning or Change to Land Use Required?~~	~~Yes~~
~~Proposed Zoning~~	~~Fair Oaks~~
~~Proposed General Plan Land Use~~	~~Downtown Fair Oaks~~
~~Vacant or Non-Vacant~~	~~Non-Vacant~~
~~Density or Proposed Density (units per acre)~~	~~60 du/ac.~~
~~Realistic/Net Units~~	~~30 lower , 14 moderate , 6 above moderate income units = 50 total units~~
~~Property Owner or Developer Interest in Residential Development?~~	~~Property owner interest expressed to City staff.~~
~~Environmental Constraints~~	~~No known environmental constraints.~~

Appendix B: Public Participation Summary

Appendix B: Summary of Public Participation

Release of Public Review Draft Housing Element

The Public Review Draft Housing Element was released for public review including posting on the City of South Pasadena's website on October 12, 2021. The City submitted the draft to HCD for their first review On October 22, 2021. Below is a summary of all outreach since initiation of the Housing Element update, all written comments on the Housing Element received by the City, and how comments on the draft were addressed in this revised draft Housing Element. The summaries of outreach and community input are organized by type of outreach or meeting.

Public Workshops

Due to the social distancing requirements enacted by the California Governor's Office of Emergency Services and the County of Los Angeles in response to the COVID-19 pandemic, public workshops were held online to provide a way for residents to engage with the Housing Element Update while not gathering in a single physical location. The City drafted and dispersed online flyers providing notice of these meetings, which contained a link where attendees could request an invitation. The invitations for these public workshops were electronically shared with the Eventbrite platform. The invitation contained a URL link that connected workshop attendees to the virtual meeting space on the Zoom platform.

Workshops 1 and 2

The City held two online public workshops with the general public to solicit feedback from City residents on Saturday, May 30, 2020, at 10 a.m. and Tuesday, June 2, 2020, at 6 p.m. The same workshop was held on the two different days and times to offer multiple opportunities to participate. The format and presentation for both workshops was the same. Those who RSVPed were invited to participate in a short online survey about Housing Elements. That survey was available before, during, and after the workshops. In addition, the City set up an email address to receive input ahead of the workshops and throughout the Housing Element Update and encouraged participants to submit comments and questions via email.

The public workshops were noticed and the flyer advertising the workshops was posted on the City's website.

The format for the workshops was a webinar-style presentation with an overview of the 6th-cycle Housing Element Update process, with a question-and-answer period in the middle. The second part of the workshop presentation focused on the requirements for analyzing sites and other approaches suitable to accommodate the City's RHNA. Interaction was conducted via chat and email to minimize inappropriate content or behavior or instances of Zoom "bombing" by uninvited guests. Participants were directed to share their questions either through Zoom's chat feature or to email their questions to the City. The City staff selected questions among those received and answered some of them during the meeting as time allowed. They indicated that all questions would be answered in a frequently asked questions (FAQ) document that they drafted after the meeting's end and was then posted on the City's website.

Public Workshop, May 30, 2020 (Workshop 1)

There were approximately 30 participants at this workshop. Due to technical difficulties with the chat feature for some participants, after the end of the presentation more questions were answered by City staff and the consultant team.

The following is a paraphrased list of questions and comments by topic that were fielded by staff during the meeting. The full FAQ list of comments and questions with responses may be accessed here: https://www.southpasadenaca.gov/home/showdocument?id=21084

- Participants asked about the RHNA process and how the number was determined for South Pasadena.
- Participants asked about the potential for golf courses, school district lands, and other sites with existing uses to be re-purposed for meeting the City's RHNA.
- Participants asked about Accessory Dwelling Units (ADUs) and their potential for rental units for low-income housing as well as the potential implications of the legalization of AirBnB in the City.
- Participants asked about the impacts of potentially increasing maximum density and height limits to increase housing supply.

Public Workshop, June 2, 2020 (Workshop 2)

There were approximately 30 participants at this workshop. The following is a paraphrased list of questions and comments by topic that were fielded by staff during the meeting. The full FAQ list of comments and questions with responses may be accessed here: ***https://www.southpasadenaca.gov/home/showdocument?id=24141***

- Participants asked about CalTrans-owned properties and how those might be used for new housing.
- Participants asked about the potential lowering of the City's RHNA resulting from the current economic slowdown and future elimination of Metro bus stops in the City.
- Participants asked about the consequences and penalties for a non-compliant housing element.
- Participants asked about the methodology for determining RHNA and how SCAG had arrived at the City's RHNA numbers.
- Participants asked about the City's future ADU guidelines.

Workshops 3 and 4

The City held two online public workshops with the general public to solicit feedback from City residents on Wednesday, September 23, 2020, at 6 p.m. and Saturday, September 26, 2020, at 10 a.m. The same workshop was held on two different days and times to offer multiple opportunities to participate. The format and presentation for both workshops was the same. Those who RSVPed were invited to participate in a short online survey about what should be discussed at the workshops. That survey was available before and during the workshops and was closed after the workshops. In addition, the City continued to accept emails to receive input ahead of the workshops.

The public workshops were noticed and the flyer advertising the workshops was posted on the City's website.

The format for the workshops was a webinar-style presentation with a brief overview of the 6th Cycle Housing Element Update process and the strategies under consideration to address the City's RHNA. Meeting participants were then separated into virtual breakout rooms to discuss questions about RHNA strategies. The groups were small, at around five people, and each had staff or consultant facilitators. Polling questions were asked of participants soon after the beginning of the workshop, after the presentation right before the breakout groups, and then the same questions were asked again just after the breakout group segment to gauge whether opinions changed based on the breakout group discussions. The polling questions were:

First poll after slide 4 – second team meeting rolls slide

- Did you participate in the Housing Element Workshops 1 or 2?
- If not, have you watched presentations the City has posted on their website about the Housing Element?

Second poll after presentation before breakout groups

- Pick a favorite strategy of the four strategies presented during Part 3 of the presentation:
    - Programs to support anticipated accessory dwelling units (ADUs)
    - Upzoning single-family areas
    - Increasing density without increasing height
    - Increasing height and density

Third poll after breakout groups and report backs

- Now that you've have a chance to discuss the strategies and hear about others' thoughts, pick a favorite strategy of the four strategies presented during Part 3 of the presentation:
    - Programs to support anticipated accessory dwelling units (ADUs)
    - Upzoning single-family areas
    - Increasing density without increasing height
    - Increasing height and density

The discussion questions for the breakout groups were:

1. Why are you attending the workshop and what is your biggest priority for the Housing Element?

2. Was there a strategy that could be useful for providing lower-income housing that was described in the presentation that stood out to you – either as a good idea or not a good idea?

3. Are there certain areas of the city where increasing housing strategies should be concentrated?

4. Can you think of examples of housing buildings in South Pasadena or other cities that would be good in South Pasadena, either because of the size, style, mix of uses, features, degree of affordability, etc.?

5. Other than the technical approaches to meet the RHNA, what other housing goals and objectives are important to you?

The workshops concluded after the breakout room discussion.

Public Workshop, September 23, 2020 (Workshop 3)

There were approximately 12 participants at this workshop. The participants represented members of City commissions, City Council members, housing advocates, community members, those who work in South Pasadena, and both renters and homeowners. The results of the two substantive poll questions for Workshop 3 were as follows:

Poll after presentation before breakout groups

- Pick a favorite strategy of the four strategies presented during Part 3 of the presentation:
  - Programs to support anticipated accessory dwelling units (ADUs) – 20%
  - Upzoning single-family areas – 30%
  - Increasing density without increasing height – 0%
  - **Increasing height and density – 50%**

Poll after breakout groups and report-backs

- Now that you've have a chance to discuss the strategies and hear about others' thoughts, pick a favorite strategy of the four strategies presented during Part 3 of the presentation:
  - Programs to support anticipated accessory dwelling units (ADUs) – 11%
  - Upzoning single-family areas – 22%
  - Increasing density without increasing height – 11%
  - **Increasing height and density – 56%**

There were two breakout groups at Workshop 3. Here is a summary of their feedback on the discussion questions:

1. Why are you attending the workshop and what is your biggest priority for the Housing Element?
   - Sees a lot of obstacles for housing and would like the City to think outside of the box
   - Knows many of the legislators that wrote the laws, wants to make sure the City makes decisions that would provide the best housing
   - Wants to make sure the City avoids liability with HCD and advocacy groups
   - Wants to hear what fellow residents thought about the different proposals and what is important for the future
   - Would like to see broad community support coming together to get behind this element.
   - Wants to make sure housing is built for everyone in the San Gabriel Valley
   - Wants to make sure RHNA gets distributed to affirmatively affirm fair housing and avoids concentrations of poverty
   - Would like to see increased density and sustainable landscapes
   - Concerned about big RHNA increase that the City has to absorb. Important to preserve small town character and single-family neighborhoods as we add housing
   - A lot of people want to live here, want to make it possible for a variety of people to live here. Likes idea of increased height limits and greater densities

2. Was there a strategy that could be useful for providing lower-income housing that was described in the presentation that stood out to you – either as a good idea or not a good idea?

- Higher-density/height can provide more affordable/lower-income housing without looking like Downtown Los Angeles
- Two-thirds of ADUs can be deemed affordable
- Believes the City needs to upzone and increase densities and will need more ideas for low-income housing
- Should go beyond the targeted zoning for the six areas mentioned
- City will run into issues with the no-net-loss rule
- Does not believe HCD will give the City the minimum number of ADUs that is calculated
- Least favorite is upzoning single-family housing
- Would like to see more analysis that increased density/height is needed. Believes the City will face some difficulty with providing sufficient proof for specific parcels
- Frustrated with the City's ability to provide low-income housing since there is no redevelopment or assistance from the State, believes the only tool available is inclusionary housing
- It's hard to imagine the proposal for upzoning single-family would be accepted by most residents, interested in what kind of implications will happen from the Housing Element in different portions of the City
- ADUs could be problematic as long-term housing, especially for families. Shouldn't be the primary solution
- Higher densities could allow a blending of housing affordable to lower- and higher-income brackets
- Not opposed to ADUs, concerned with affordability levels
- Concerned about reliance on ADUs
- More potential for ADUs as a solution than other options
- ADUs are a wonderful idea. City should allow ADUs to be legalized/acknowledged without penalty
- Asked about Caltrans properties. City let the questioner know that they have not heard back from Caltrans regarding a potential partnership. City is interested in working with Caltrans to rehabilitate the Caltrans properties. Can't easily count those towards to RHNA because they are not new units.
- Desires choices for all affordability levels
- Increase in height and density sounds nice. Interested in understanding more about how to distribute height and density so as not to limit affordability options to confined areas
- Concerned about waiving or lowering parking requirements and traffic from ADUs
- Be careful with parking issues
- Important to consider reasons behind voter-imposed height limit
- Preserve small-town character

3. Are there certain areas of the city where increasing housing strategies should be concentrated?

    - To reduce GHG emissions, housing should be concentrated around High-Quality Transit Area (Gold Line Station)

- Should be as close to the Gold Line Station as possible, should eliminate parking requirements in those locations
- Along transit corridors (Huntington/Fair Oaks/Gold Line)
- Near the Gold Line is preferred; however, it is a historic district
- Vons center is a prime location
- Definitely near transit, there will be some capacity issues with the historic character, commercial corridors
- At least half of participants agreed housing should be dispersed through many areas of the City

4. Can you think of examples of housing buildings in South Pasadena or other cities that would be good in South Pasadena either because of the size, style, mix of uses, features, degree of affordability, etc.?

    - Monrovia/Azusa examples, options are diverse in terms of affordability
    - Smaller buildings on Raymond Street (south of Colorado) at Fair Oaks/Mission, need good design guidelines
    - Encinitas, higher-density project example (May 20th presentation to City Council)
    - Hiring great architects, variety of designs that are respectful of the context
    - The mix of densities by the middle school. There is a tradition of a mix of densities in South Pasadena.
    - Historic Ostrich Farm building in South Pasadena
    - President Apartments at 669 South Union in Los Angeles. It is a six-floor apartment building with 105 units.
    - We have a good mix all over town. Multifamily units are well integrated. Fit with diversity of architectural styles appropriate for each neighborhood
    - Mission Meridian in South Pasadena. It is a traditional mix with landscaping, setbacks, and quality materials. It did a good job of reflecting the historic character while also providing relatively dense housing and a range of bedrooms.

5. Other than the technical approaches to meet the RHNA, what other housing goals and objectives are important to you?

    - As close to the Gold Line as possible, parking reformed
    - Proactive code enforcement, rental housing
    - Inclusionary Housing Policy
    - Sustainability
    - Affordability was mentioned by several people
    - Inclusive of income groups/families
    - Ability to be here in the long haul
    - More permanent supportive housing
    - Population-specific housing
    - Encourage long-term tenants and homeowners, mix of kinds of housing and affordability

- Community, sustainability, and infrastructure adapting to climate change

The following question was brought up during the breakout groups:

- Has South Pasadena explored tax increment financing in lieu of disassembly of redevelopment?

Public Workshop, September 26, 2020 (Workshop 4)

There were approximately 15 participants at this workshop. The participants represented members of City commissions, housing advocates, community members, students, those who work in South Pasadena, and included renters and homeowners. The results of the two substantive poll questions for Workshop 4 were as follows:

Poll after presentation before breakout groups

- Pick a favorite strategy of the four strategies presented during Part 3 of the presentation:
  - Programs to support anticipated accessory dwelling units (ADUs) – 15%
  - Upzoning single-family areas – 31%
  - Increasing density without increasing height – 15%
  - **Increasing height and density – 38%**

Poll after breakout groups and report backs

- Now that you've have a chance to discuss the strategies and hear about others' thoughts, pick a favorite strategy of the four strategies presented during Part 3 of the presentation:
  - Programs to support anticipated accessory dwelling units (ADUs) – 0%
  - **Upzoning single-family areas – 43%**
  - Increasing density without increasing height – 14%
  - **Increasing height and density – 43%**

There were three breakout groups at Workshop 4. Here is a summary of their feedback on the discussion questions:

1. Why are you attending the workshop and what is your biggest priority for the Housing Element?
   - Has followed the state laws and wants to make sure the City builds good looking beneficial housing
   - Not against raising the height in certain area (Ostrich Farms)
   - Housing should relate to the existing character and add value to the City
   - Believes affordable housing should be done first
   - Wants to hear what the community wants in terms of meeting our RHNA goals
   - Wants development of Caltrans properties according to the character of the community
   - Interested in seeing more housing in the area, different types of housing suitable for families
   - Would like a housing element that will sustain growth that the City can accommodate reasonably
   - Concerned about impacts on schools
   - Favors some minor height improvements in key areas

- Need more flexibility for low-income housing design
- Inclusionary housing regulations
- Affordable housing
- Address density and height within zoning (increase)
- Wants priority city process to follow HCD guidelines
- Prioritize geographic equitable distribution of units
- Prioritize housing dispersed equitably not just in concentrated areas.

2. Was there a strategy that could be useful for providing lower-income housing that was described in the presentation that stood out to you – either as a good idea or not a good idea?

- No. The City would have to work with an outside partner (regional). There is no incentive for developers to provide affordable housing.
- None of the above, none of the options presented were good. Need to build more and increase density. Concerns about traffic around Ralphs and Vons sites.
- Most residents favor height and density modifications in certain areas but not all over town. City-owned property on Mound/El Centro could be a good candidate for low-income mixed-use housing, three to four stories.
- Look at adaptive re-use/micro-apartments. Need to work with the state to get credit for these types of developments.
- Upzone throughout the City (single-family areas). Would provide more opportunities. Focus on specific parcels for more density and height.
- A few people said all of the above.
- Reduce parking.
- Increase density without increasing the height, and work with developers to not create boxy projects. Can do a lot with density without height, allow up to five stories perhaps? City doesn't allow smaller product because of density.
- Adaptive re-use is counted by HCD for RHNA.
- 80 percent development assumption is not likely.
- Eliminating parking minimums in the Mission/Meridian zone.
- Downtown does not need more parking to claim more affordable units.
- The more we look at density, upzoning single-family lots, and increasing height will make a difference for planning for versus the actual building of housing. Should keep in mind.
- Inclusionary zoning. Could achieve a large amount through inclusionary housing.
- A few people liked the height and density increase strategy and had these additional comments:
    - One worried about ballot measure actually passing.
    - Likes the Andalucia precedent project.
    - Concern about sites at the periphery, need transit-oriented development.
- Upzoning single-family would be good for disbursement of housing in City. So, favor single-family upzoning but may be a stretch.
- Closer to transit (rail).

- A few people were skeptical about aggressive ADU numbers. Some had additional comments:
    - Doesn't understand how that works for renters.
    - Hard to monitor.

3. Are there certain areas of the City where increasing housing strategies should be concentrated?

- Throughout the City but look for specific areas around transit, commercial areas, neighborhood amenities.
- Concentrate around transit stop, walkable places, Downtown, Fair Oaks, Mission District. Opportunity by Ostrich Farm can be created.
- Mound/Oxley is close to amenities and would encourage walkability/public transit.
- Huntington Drive has pockets that could accommodate increased density, paratransit would be needed to support development in other areas.
- All of the above - Downtown, Mission west of the subway stop, Mission should allow four stories.
- Mission west does not want to mess with the historic downtown. There is not a lot of transit ridership. Has been a decrease in ridership.
- If throughout City, not blanket, culture may not support it.
- City/PlaceWorks has done a good job of identifying areas but there are some additional/other areas: Huntington Drive is underutilized (four cities connect). Currently, medical offices and low rise that is underutilized. Also look at Ostrich Farm, Mission, and Fair Oaks.
- First priority is near Gold Line station. Incalculable asset that we are not realizing potential of.
- Meridian mixed-use is good. Exciting possibility for mixed-use and density in that corridor.
- Disbursement throughout City but with contextually different housing types. More near transit and services (Gold Line). Well served everywhere already, so can add housing anywhere.
- Prefer to see more housing near transit hubs (Mission/Fair Oaks and metro station).
- Near transit and where practical; consider vacant lots.
- Downtown could accommodate a lot; Fair Oaks has a lot of opportunity for mixed-use; should be spread to some of the existing multifamily areas - triplex/four-plex.
- Shouldn't only be in 3-5 targeted areas of the city. Look at single-family residential neighborhoods also. Allow higher densities on first two-three properties off main corridors.

4. Can you think of examples of housing buildings in South Pasadena or other cities that would be good in South Pasadena either because of the size, style, mix of uses, features, degree of affordability, etc.?

- Different style in different places, Mission should look like it was built 150 years ago.
- Different styles are appropriate, design review process is important, micro-apartments is something that should be considered in some areas, should not limit ourselves to a specific style/type.

- Townhomes at Hope and Meridian is a good example, design standards that are not automobile oriented, cars are moved to the back, less curb-cuts, design and size should prioritize three bedrooms or more to accommodate families.
- Mission/Meridian townhomes, variety of styles, bungalow to Spanish, does not want generic developments, need to have a sense of place, or reflects the historic character.
- Needs to represent South Pasadena, Adobe style, historic examples, character needs to be similar to the unique neighborhoods.
- Respect the historic fabric of the neighborhood block, be flexible given the context of the neighborhood, save the front historic design and modifications are located in the back, concerned about affordable housing
- Generally, multifamily - Look at occupants, tenants (end users) as they transition over lifespan. Professionals, families, seniors; look at different users. Density/massing/open space/courtyards great but also can limit development so we need to look closer as implications of those constraints. It can be too restrictive. Need to dive into more and see specific examples.
- Dense, walkable courtyard multifamily buildings already exist in South Pasadena. See Bank Street (10 units of housing in communal setting possible because without onerous parking requirements). Would love to see that happen again. Currently, the City parking requirements do not allow such projects to be built. Would like to see requirements change to bring back those types of projects and diversity of housing types.
- Sierra Vista Apartments on Esperanza Avenue (low-income senior, 1-2 bed), example of dense affordable complex with beautiful exterior - Yosemite lodge style. Blends well with single-family and multifamily on block. It is only 45 units, so maybe higher density to get more units.
- Likes Andalucia example, doesn't like Aliso example.
- Mission Meridian.

5. Other than the technical approaches to meet the RHNA, what other housing goals and objectives are important to you?

- Design standards are set in stone, we can make sure it looks good.
- That infrastructure/community services are able to support the new housing units.
- Specifically, how we address affordable housing. One concern of ADU plan is that her work as an architect has shown that ADUs are just additional single-family for real estate but does not meet the goal of affordable units. Not just adding units, but how can we assure they are affordable units? Multifamily development also needed to meet minimum they need to make their projects pencil out. Make it more viable and provide more assurance. Don't skim the surface. Financing for developing affordable units is needed, mentioned Pasadena as an example. Can City partner with bank or banks for affordable housing?
- Housing Element sets values to production. Wants to see recognition of race-based exclusionary practices. Contemporary recognition and repair of redlining and other racist practices. Altos de Monterey in the 1960s was the only place to allow non-white residents. Would like to see acknowledgement of past and commit to real policies that are equitable.
- In addition to being affordable, have permanent supportive housing.
- Reduce parking requirements near transit stops.

- Tenant protections.

The following questions were brought up during the breakout groups:

- Do all units count the same toward the RHNA requirement? For example, is a one-bedroom apartment treated the same as a three-bedroom dwelling?
- Could 710/Caltrans money be used for more transit?
- RHNA appeal, what are our chances to lower our numbers?

Workshop 5

Public Workshop, October 21, 2021 (Workshop 5)

The City held a hybrid public workshops after release of the public draft Housing Element on Thursday, October 21, at 6:30 pm. Participants had the choice to attend in person at City Hall or to attend virtually. The purpose of the workshop was to provide an overview of the 2021-2029 Public Review Draft Housing Element. After the presentation, the public was invited to ask questions and share comments. The meeting had approximately 12 participants, including two in-person and others on Zoom. Four participants spoke. The following summarizes these questions, comments and staff responses:

- The first question asked for clarification about AB 1398 regarding the possibility for getting the Housing Element approved by HCD by the February 11th deadline in order to avoid the mandatory timeframe for rezoning. The City clarified that before AB 1398 was approved, the February 11th deadline was for the adoption of the Housing Element by the City Council. However, with the change in law, adopting the Housing Element by the February 11th date is no longer a requirement to stay on the 8-year housing cycle. The law says in order to avoid a deadline to complete the rezoning within one year of October 15, 2021, the City would need to have adopted their Housing Element and submitted the adopted Housing Element to HCD for a 90-day review and receive certification at the end of that review before February 11, 2022. That new timeline is not feasible because the City is at the initial point of submitting the Draft Housing Element for the first 60-day review by HCD and will not have enough time to adopt and submit the final to HCD by February 11, 2022. Consequently, the City will adopt after February 11, 2022 and be required to complete the rezoning before October 15, 2022.
- The next question asked was in reference to whether Junior Accessory Dwelling Units (ADUs) were included as part of the site inventory in order to meet the City's RHNA. The City answered that both ADUs and JDUs will be counted.
- The third question asked how the City plans to incorporate the 6th, 7th and 8th (future) Regional Housing Need Allocations (RHNA) if the General Plan update is a 25-year plan with the follow-up question about the City's approach for meeting the RHNA from the 1st - 5th Housing Element updates. The City answered that through the 8-year timeframes for updating the Housing Element, the City will attempt to show that the City has the capacity to build the units during the projection period while keeping in mind that the City's capacity to develop these units is in line with the longer-term General Plan. The Housing Element is on a different timeframe from the General Plan and will be updated again in 2030. Furthermore, staff clarified that the Program Environmental Impact Report (PEIR) will be covering the Housing Element, General Plan Update and Downtown Specific Plan (DTSP). Thus, the City will use the General Plan and the PEIR as guide when analyzing appropriate sites for the next housing element update. To answer the follow-up question, staff explained that the City was able to address capacity for the 63 RHNA units in the 5th Housing Element with existing zoning.

- The next question was in regard to the sites inventory. A property owner wanted to confirm that his property was included in the sites inventory as he is interested in developing housing. PlaceWorks confirmed and directed the speaker to find the site in the document. The property was identified as Site #4 and is shown in Table VI-46 and Appendix A. The speaker also wanted to know where the City was in terms of timeline for revising the General Plan. City staff answered that there is a draft of the General Plan Update from 2019, but that it had been put on hold during much of the Housing Element Update preparation in order to integrate consistent programs and policies that align with the Housing Element. Staff stated that the revised draft of the General Plan will be released for public review shortly.

The last comment was about the importance of the City undertaking companion capacity planning for infrastructure including schools, water, wastewater, parking, etc. The commenter noted that the community has been requesting this type of analysis for two years. He would be more comfortable with the plan for housing presented in the draft if that infrastructure analysis was completed.

Workshop 6

Developer Forum August 15, 2022 (Workshop 6)

There were 8 community members, including two Planning Commissioners in attendance at the City's Developer Forum on August 15, 2022. The City provided a brief presentation that included a status update of the draft Housing Element and the draft General Plan and asked for input on several topics related to development in the City and received the following responses.

Questions #1: Please provide input on development standards, processes, and procedures

- A local developer recently had issues with the open space standards and the landscaping requirements for multi-family/high density projects. They felt these requirements could constrain a project and the City should consider reducing the amount of open space/landscaping requirements and allow for roof top landscaping. Program 3.n Zoning Changes requires the City to review the development standards and processes including height limits, open space standards, parking requirements including variances and findings for design review.
- A local developer that had done several hillside developments in 2017 was required to remove trees to do the project. This required several trips to the Natural Resources Committee which delayed the project. There were requests to build the units around the trees and bring back to the Committee which added more time and cost to the project. **Program 3.n** Zoning Changes requires the City to review the development standards and processes including height limits, open space standards, parking requirements including variances and findings for design review.
- Another participant spoke about the entitlement process and specific issues with parking requirements. They found it was difficult to meet the density bonus requirement for parking reductions and stated that based on her experience South Pasadena has enough public parking available to meet local demands and the City should consider parking reductions. **Program 3.n** Zoning Changes requires the City to review the development standards and processes including height limits, open space standards, parking requirements including variances and findings for design review. The City is also considering a single parking requirement in the downtown that could reflect the transit-oriented nature and to require bike parking. **Program 3.b** - Mixed-Use Developments and Adaptive Re-Use Specific actions proposed to facilitate mixed use development in the Downtown Specific Plan include engaging the development community and property owners to promote shared parking and consider reducing on-site parking requirements on shopping streets to leverage transit access and to incentivize potential office and multi-family residential mixed-use development.

- This participant also said that the current height limit of 45 ft is very challenging and was aware that it could get waived with a state density bonus, but the process takes too long. They recommended that the height limit be increased to 55 or 65 feet in specific areas along Mission Street, Fair Oaks, Huntington Dr., and Monterey Road. **Program 2.n** Citywide Height Limit Ballot Initiative will require the City to place a measure on the ballot in a local election to increase allowed heights above the current citywide limit of 45 feet.
- Another participant suggested the open space/landscaping requirements need to be more flexible because when you have to provide open court yards and private open space you have to increase the height of projects because of requirements. They felt that the Open Space requirements (within downtown area) need more flexibility. **Program 3.n** Zoning Changes requires the City to review the development standards and processes including height limits, open space standards, parking requirements including variances and findings for design review.
- A local developer suggested that the entitlement process he experienced allowed him to work with a planner in between Planning Commission reviews to help move the project along. He encouraged making that an option for the future.
- There was on suggestion that the City should implement an electronic permit system. **Program 3.e** required the City to develop an electronic permitting system for Planning and Building permits, and other relevant permit functions to increase efficiency in processing residential and other permits and to provide accurate data to monitor housing production and other development.
- One comments from a developer was that the City doesn't have enough planner to handle the volume of projects that are coming in for application and the City should consider bringing on additional contract planners to assist with project application reviews. The Community Development Department also recognizes the concern shared by the developers and has staffed up to deal with the project demands and are now more able to take on the new case load.

Question #2: Input on Inclusionary Housing Ordinance

- A develop who has built housing in South Pasadena said that in his experience the inclusionary housing threshold of three units is too low of a requirement. He wanted to do a 4-unit project but it was too costly with the inclusionary housing requirement. The three-unit requirement encourages developers to do bigger units so they don't have to pay the inclusionary housing fee. **Program 2.m** the City will update the Inclusionary Housing Ordinance to reduce the required percentage of inclusionary units from 20 to 15 percent. The City will also analyze the following parts of the regulations and will update them as needed to address constraints including the unit threshold, the In-lieu fees and cost of a comparable unit and how the inclusionary regulations relate to state Density Bonus law.

Question # 3: Input on likelihood of development of sites in key areas

- All attendees participated in a polling regarding the likelihood of development. The five shared sites were rated by most as either somewhat likely or highly likely to develop. The two most likely to develop were the Pavillions site and Shakers sites.
- Proposed Ostrich Farm Site 5 (Liquor Store)
  - Voted somewhat likely to be developed with mixed-use or residential-only develop by the developer panel.
- Proposed Downtown Specific Plan Site 10 (Near Mission Meridian)

  - Voted somewhat likely to be developed with mixed-use or residential-only develop by the developer panel.
  - Comments on site: The diagonal edges on Site 10 is problematic for parking. The odd shape makes it hard to design the parking layout and fit in the required number of spaces. Recommendation was to reduce the parking requirement.

- Proposed Downtown Specific Plan Site 14 (City-Owned Parking Lot and Single-Family Residence)
  - Voted somewhat likely to be developed with mixed-use or residential-only develop by the developer panel.
- Proposed Downtown Specific Plan Site 16 (Shaker's site)
  - Voted highly likely to be developed for mixed-use or residential only develop by the developer panel.
  - Comments: Allowing for higher height limit would be helpful on this site since it's near transit (near the Freeway).
- Proposed Downtown Specific Plan Site 21 (Pavillions)
  - Voted highly likely to be developed with mixed-use or residential-only develop by the developer panel.

Workshop 7 & 8

Community Outreach at SP Farmers' Market, August 18, 2022 (Workshop 7)

On Thursday, August 18, 2022, the Community Development Department set up a booth in the South Pasadena Farmers' Market from 4:00 to 8:00 pm to discuss the Housing Element. The late afternoon/evening market attracts hundreds of residents and many local employees and is a casual atmosphere for sharing ideas. Over the four-hour duration of the Market, Community Development staff discussed various aspects of the housing element with visitors to the booth, including: the sites inventory; ADUs; the regional housing crisis; the need for rezoning and mixed-use development and where it would be located; and reconsideration of the voter-approved height maximum through a new ballot initiative within the next two years. Those who stopped by expressed appreciation for the opportunity to talk to City staff about the issues.

Specific comments from community members that stopped by the booth included:

- Support for taking time for the community outreach on the height limit ballot measure
- Support for more housing and getting away from the exclusionary past of the City.
- Property owners in support of the housing overlay that will allow more housing on their property
- Support for modular ADUs and for pre-approved standard plans that residents could utilize (in line with Program 3.f in the draft HE)
- Opposition to any height limit cap revision and to more density
- Support for more height for residential only
- Support for allowing higher and denser development in Downtown near the L Line station, provided the architecture and design meet City standards.

Community Forum and Informational Workshop, August 20, 2022 (Workshop 8)

The City held a hybrid public workshop on Saturday, August 20, 2022, from 10:00 to 11:30 am. Participants had the choice to attend in person at City Hall or to attend virtually. The purpose of the forum was to provide a brief overview of the Housing Element process; provide an update to the community on the status of addressing HCD's comments to the second draft of the Housing Element; and to solicit feedback from the community on the draft document and proposed programs. After a brief overview of the housing element process, the presentation focused on the bigger issues that needed to be addressed in the Housing Element, including the site analysis, development constraints including the height limitations, and Affirmatively Furthering Fair Housing.

After the presentation, the public was invited to ask questions and share comments. The meeting had approximately sixteen participants, including nine in-person and seven on Zoom. Thirteen participants spoke. The following summarizes these questions, comments and staff responses:

- Resident asked if there was a density that HCD would assume that anything over a certain density would be affordable.
  - City staff responded that there is a minimum density that sites need to be able to meet in order for the site to be suitable for affordable housing.

- Resident, who self-identified as former city planning director, stated that the existing General Plan maximum density of 24 du/ac is "ridiculously low." The maximum density could be raised to 36 du/ac without increasing the city-wide height limit. Supports removing the height limit in the proposed Downtown Specific Plan area.
  - City staff thanked the former planning director for his comments.

- Since sites less than half an acre aren't suitable for affordable housing, and a lot of the identified sites have been removed, it's not clear which sites the City is proposing to increase the density on to make up for the shortfall in units.
  - City staff explained that the City is taking two simultaneous paths to meet the City's housing needs. One path is to identify specific sites that the City expects will be redeveloped into housing during the planning cycle. The second path is to increase the allowable density in a large area of the city, focused on the proposed Downtown Specific Plan area, where some percentage of the sites throughout the entire area will be redeveloped without identifying which specific sites those will be.

- Could the City provide an overview of the terms of the stipulated judgement resolving the existing housing element lawsuit against the city?
  - The City Attorney provided an overview of the terms of the judgement: the City must submit a revised draft of the Housing Element to HCD no later than September 15, 2022; the City must initiate a ballot initiative to remove or revise the City's height limit, and if it fails do a mid-cycle review and update of the Housing Element to meet the City's housing needs under the existing height limit; until the Housing Element is adopted, the City will not object to Housing Accountability Act projects that are proposed; and a requirement to prepare more detail regarding the applicability of the identified sites in the site inventory.

- Where in the hierarchy of land use laws does the voter approved height limit fall?

  - City staff responded that a voter approved initiative supersedes both the General Plan and Zoning Ordinance of the city, and that if they conflict the voter approved initiative prevails. However, if the voter approved initiative is in conflict with State law, then the State law supersedes the voter approved initiative. Since South Pasadena's height limit does not directly contradict State law, and because there are alternative ways for the City to meet its requirements under State law that do not require the repeal of the height limit, it's the opinion of the City that State law cannot supersede the City's height limit.

- ADUs have been very popular in South Pasadena, what assumptions does HCD make regarding the affordability of ADUs.
  - City staff responded that the City must base its projection of the permitting of future ADUs on the number of ADUs permitted in past years, and that the City has to document rent on ADUs to take credit for the affordability of those new units in its annual report to HCD.

- Concerned about increasing the height in the downtown area, can the City look at increasing the density of areas outside of the downtown area instead of increasing the height. Also concerned about mixing condos and multi-unit developments in the single-family residential areas.
  - City staff responded that raising the density and height in the downtown area would allow for the necessary growth while preserving most of the city's existing neighborhoods. There is a choice the City and community needs to make about where these new units are going to go, and the direction most members of the community have provided is to increase the density in the downtown area since it's close to transit and walkable.

- What is the proposed new height limit?
  - City staff responded that currently there is not a specific height that the City is aiming for, but instead that the height needs to be tall enough to allow for the density anticipated by the Housing Element given the other development constraints imposed by the City's zoning. Furthermore, this is a question that the community will need to help answer, and is part of why the City is holding this community meeting and will be holding future community meetings on the topic.

- Can the City take credit for the affordability of ADUs that have been built previously, or only those built during the planning period?
  - City staff responded that the City can only take credit for the affordability of ADUs built during the planning period.

- On the General Plan and Mission Street Specific Plan committee during the 1990s, the goal was to downzone the city to reduce the projected population from over 60,000 as proposed in the previous General Plan from the 1960s to something more "reasonable." The City should be working to fight its RHNA allocation because accommodating that many new units will ruin the city as a small town. With the proposed changes, the added traffic will make the main thoroughfares of the city impassable.
  - City staff responded that the goal is to provide the community options for how to accommodate the city's housing needs.

- The City needs to do more public outreach, including making hard copies of the Housing Element and other planning documents available in hard copy at the public library, and to include visual aids in the documents that illustrate the different densities that are being proposed.

  - City staff responded that the City is doing outreach, such as this meeting, and that visual aids are included in the Housing Element to illustrate the proposed densities. Hard copies of the drafts have been available at City Hall and the Library, and as future drafts are released, they will also be made available in hard copy at these locations.

- Has the City looked at the Arroyo Seco Golf Course as a suitable housing site for affordable housing?
  - City staff responded that converting the golf course into homes is an option, but one that is not politically popular and therefore not proposed as part of the Housing Element at this time.

- What are the medium- and high-density residential densities in the draft General Plan?
  - City staff responded that the draft General Plan has not been finalized yet, but that it is expected that a public review draft will be available by the end of September.

- What are some creative solutions and options for meeting the housing needs other than building new units, such as converting existing family-owned apartments to low-income units?
  - City staff responded that the City cannot count existing units to meet its RHNA needs. Most of the time, existing family-owned apartments are the least expensive housing options in a community, so by converting those into deed-restricted Affordable Housing, it eliminates naturally occurring affordable housing and does not create any additional housing opportunities for the community.

- Concerned about the sustainability of the continuation of building new homes.
  - City staff responded that the solutions to our climate crisis and the solutions to our housing crisis are the same: building more housing near transit and building walkable, transit served communities.

- City has an ordinance that puts a constraint on demolishing buildings that are more than 45 years old.
  - The City does have a historic preservation ordinance that may require structures 45 years or older not identified as a cultural resource to obtain a Certificate of Appropriateness for demolition or alteration from the Cultural Heritage Commission (CHC). However, it is important to note that these projects taken to the CHC for demolition have not been denied since the ordinance was adopted. Therefore, the ordinance does not appear to be a constraint.

- What are the consequences of the City being out of compliance of the Housing Element Law?
  - The City Attorney responded that a lawsuit can be brought against the City where a judge could remove the City's land use authority and/or impose fines. The City was sued, and has a stipulated judgement that requires the city to take certain actions, described above, but does not remove the City's land use authority or impose punitive fines on the City. Additionally, the State Attorney General can sue the City and impose fines on the City, but since South Pasadena is working towards completing its Housing Element it is not expected that the Attorney General will sue the City and instead will focus on cities that are not working towards adopting a compliant housing element.

- Have we looked at other cities that have certified housing elements to see how they meet their housing needs?
  - City staff responded that the City is looking at the certified housing elements, but that many cities have significantly different conditions that make it easier to achieve a compliant housing element.

Workshop 9

Community Outreach at the Social Services and Social Justice Forum

A ninth workshop was held on November 9, 2022 in conjunction with the City's First Annual Social Services and Social Justice Forum. City staff and the City's Housing Element consultant were on hand to discuss the Housing Element with members of the public and service agencies present for the Social Justice Forum

Surveys

The City conducted public outreach via two online community surveys. Each of the surveys was launched prior to public workshops for the Housing Element Update.

Survey 1 – May - September 2020

The first survey was made available on the City's website in May 2020 and was open until September 2020 to allow for a long time period for input to be provided due to the impacts of the COVID-19 pandemic. The link to the survey was also sent to everyone who registered for Workshops 1 and 2. The main purpose of the survey was to gauge participants' experience with Housing Elements and the General Plan and to find out a little bit about their perspective on housing issues. A total of 33 responses were received. The survey text is shown in italics below:

Thank you for taking the time to complete this short survey about housing and the General Plan Housing Element. This survey should take about 2 minutes.

1. *Are you:*
   a. *Renter in South Pasadena*
   b. *Property owner in South Pasadena*
   c. *Other*

2. *Have you heard of the Housing Element of the General Plan?*
   YES or NO
3. *Have you heard of the regional housing needs assessment or RHNA numbers?*
   YES or NO
4. *Please rank the following issues in order of importance to you.*
   a. *Production of additional housing stock*
   b. *Preservation of existing housing stock*
   c. *Creation of economically sustainable neighborhoods*
   d. *Providing a diverse cost range of housing opportunities*
5. *Has housing affordability impacted you or your family personally?*
   YES or NO
6. *Have you participated in the City's General Plan Update process?*
   YES or NO

The following summarizes the responses to the survey:

1. Are you a renter, property owner, or other?

   Approximately 60 percent of respondents were property owners, 35 percent were renters, and 3 percent chose other.

2. Have you heard of the Housing Element of the General Plan?

   Three quarters of respondents had heard of the Housing Element, one quarter had not.

3. Have you heard of the regional housing needs assessment or RHNA numbers?

   Approximately 80 percent of respondents had heard of RHNA, 20 percent had not.

4. Please rank the following issues in order of importance to you?

   Respondents ranked the four options in the following order from highest to lowest priority:

   - Providing a diverse cost range of housing opportunities
   - Creation of economically sustainable neighborhoods
   - Preservation of existing housing stock
   - Production of additional housing stock

   It should be noted however that most respondents chose all four options as priorities.

5. Has housing affordability impacted you or your family personally?

   Approximately 55 percent of respondents had been impacted personally in terms of housing affordability, approximately 45 percent had not been impacted.

6. Have you participated in the City's General Plan Update process?

   Approximately 58 percent of respondents had previously participated in the General Plan Update process, approximately 25 percent had not.

Appendix B

Survey 2 – September - October 2020

The second survey was made available on the City's website in September 2020 and was open until October 2020. The link to the survey was also sent to everyone who registered for Workshops 3 and 4. The main purpose of the survey was to identify the housing strategies people would like to learn about and discuss at Workshops 3 and 4. A total of 17 responses were received. The survey text is shown in italics below:

Thank you for taking the time to complete this short survey about how the City of South Pasadena can achieve its Regional Housing Needs Assessment (RHNA) allocation for the 2021 Housing Element Update. This survey should take about 2 minutes.

During the workshops on September 23rd and 26th, 2020 we plan to discuss the following topics that are options for the City to address its RHNA allocation:

- *Effort to Appeal the City's RHNA number*
- *Options to Address the RHNA and Receive a Certified Housing Element*
    a. *Programs and strategies for an aggressive program to produce more affordable Accessory Dwelling Units (ADUs) in South Pasadena*
    b. *Options for zoning changes to increase density (number of housing units allowed on a property)*
        i. *Allowing more ADUs to be built on a single-family property*
        ii. *Allowing multifamily housing buildings to be built in single-family neighborhoods*
        iii. *Allowing housing to be built in areas that do not currently allow residential development*
        iv. *Increasing building heights and densities to allow more housing units to be built in mixed-use areas in town and/or just on specific sites*

1. *Have you participated in the City's previous Housing Element workshops?*
2. *Do you agree that the City should appeal its RHNA allocation of 2,062 housing units?*
3. *Should South Pasadena's RHNA remain unchanged, which of the following options would you support to enable the City to meet this target? Choose as many as you agree with.*
    a. *Aggressive program to incentivize development of affordable accessory dwelling Unit/Secondary Units*
    b. *Upzoning single-family neighborhoods to allow more ADUs, duplexes, or aggregating properties for multifamily development*
    c. *Increased density in specific areas of the City*
    d. *Increased height in specific areas of the City*
    e. *Increased density and height in specific areas of the City*
    f. *Increased height contingent upon additional design and development standards to ensure scale and character compatible with the neighborhood*
    g. *Other*
4. *What other topics/options would you like to see discussed at these or future workshops?*
5. *What questions do you have about the RHNA or 2021 Housing Element Update?*

The following summarizes the responses to the survey:

1. Have you participated in the City's previous Housing Element workshops?

   41 percent of respondents said yes, 59 percent said no.

2. Do you agree that the City should appeal its RHNA allocation of 2,062 housing units?

   35 percent said yes, 41 percent said no. Three people chose other and wrote in a response. The write-ins included two people who said the appeal won't work, another said don't spend any money on the RHNA appeal, and another said they don't know enough to choose yes or no.

3. Should South Pasadena's RHNA remain unchanged, which of the following options would you support to enable the City to meet this target?

   The number of votes each strategy received is shown below from the strategies that received the largest number of votes to those that received the least votes.

   - Increased density in specific areas of the City – 9 votes
   - Increased density and height in specific areas of the City – 9 votes
   - Upzoning single-family neighborhoods to allow more ADUs, duplexes, or aggregating properties for multifamily development – 8 votes
   - Increased height contingent upon additional design and development standards to ensure scale and character compatible with the neighborhood – 7 votes
   - Aggressive program to incentivize development of affordable accessory dwelling Unit/Secondary Units – 6 votes
   - Increased height in specific areas of the City – 6 votes

   Several write-in strategies were also proposed:

   - Convert any retail and business buildings that become vacant to residential
   - Widescale upzoning of single-family neighborhoods
   - Reuse empty commercial buildings for affordable housing
   - Increased height and density throughout the City.

4. What other topics/options would you like to see discussed at these or future workshops?

   - I would like to know what ways you guys are planning to fit the 2,062 housing units if the height limit is not changed.
   - Use of non-profit developers versus regular developers.
   - The aggressive ADU idea is an attempt to shirk the city's responsibility to build more housing. It will likely not succeed - as the state will not accept it. ADUs have been legal in South Pasadena for 3 years and there has been almost nothing built. There is little the city can do to get more "aggressive" - let alone reach the type of numbers being talked about. The City needs to allow real densities of greater than 30 units to an acre in your multifamily areas. The multifamily I've seen built has such low densities that it encourages only luxury 1,900 square foot condos.

- There is a lot of fear of change in South Pasadena. Can we help people visualize South Pasadena in a future that satisfies RHNA requirements? That might help focus energy on the choice between the options.
- Streamlined permitting process. Progressive ways to address the missing middle housing types.
- I hope to see the elimination of parking requirements to facilitate unit production and a serious discussion about inclusionary zoning.
- Adaptive reuse of commercial buildings for affordable housing.
- At the first Zoom Housing Meeting, numerous sites were presented as potential areas for development. But much of this data was based on a single conversation with the owner of the property who "said they were open to considering development." I found that rather loosey goosey. There were too many "ifs" in that scenario.
- South Pasadena, along with other towns, is bleeding commercial space. What are the options for converting some of these into work/living lofts?
- Finally, all of the development that has been greenlit in the city only offers 13 "affordable units." All development must focus on affordability or we can never come close to meeting the numbers. We know that developers don't make money on building affordable housing, so who will the city partner with to make that happen?
- What about the additional infrastructure that will be needed to support 20 percent more units and a 20 percent increase in population?
- We just came out of a 7-year drought. Where will the extra water supplies come from?
- Multiple studies in the last decade, including at Mission Meridian, have proven that transit based housing is an urban myth. It does not reduce traffic. If this plan goes forward, how will South Pasadena achieve its green Climate Action Plan goals in the coming 10 to 20 years?
- Regarding specific locations within the City to be up zoned – PlaceWorks' previous presentation at the Planning Commission did not address Huntington Drive or any area south of it.
- Even in a city as small as South Pasadena, effects of any changes will be distributed unevenly, which will produce uneven follow-on effects. I live near the Metro station and near the proposed Seven Patios project, which will create a significant traffic impact, especially on Farmer's Market days. How do any of the proposed options take into account the related structural changes that they will create?

5. What questions do you have about the RHNA or 2021 Housing Element Update?

- In what ways are you planning for the moderate and above moderate housing if you don't get the 1,000 ADUs?? What is the current zoning capacity of South Pasadena assuming the 50 units/acre for the Draft DTSP??
- In what ways is the City of South Pasadena critically thinking about progressive development, instead of just appealing the RHNA numbers?
- More information on inclusionary requirements, ADU considerations for RHNA counts, and Caltrans housing considerations for RHNA counts.
- I have some questions as to the accuracy of the predictions since they were determined pre-Covid. There are now more people moving out of the California than moving into the state.

- The increased density adjacent to the Gold Line Station under the pretense that all of these people will take the train to work in Pasadena/Downtown L.A. is a false flag. No one at the Mission Meridian Transit Village takes the Gold Line to commute. The ridership on the trains has steadily declined for three years. The few people I know who used the train to commute to Downtown Los Angeles are now driving as a precaution during Covid-19. The condos at the Mission Meridian Transit Village sold for upwards of $1.1 million in 2005. To be honest, it's highly unlikely that anyone who has paid that amount of money for a home is commuting by train. This was reported in the Los Angeles Times in 2007 and still holds true today. My council member used to ride his bike to take the train, but even he has quit doing that. He affirms that residents living at Mission Meridian are not commuting by train.
- Explain why South Pasadena never responded to the AFFH or LPFS surveys sent out by SCAG in 2018 and due back no later than April 2019. Our city's allocation now includes excess allocation from other cities who responded to the survey and saw their initial allocations reduced.
- When are you going to admit you want our city to look like Glendale, Pasadena, and Alhambra?
- Do we need to vote on these changes to the General Plan or will it be decided by the City? For instance, height increase was considered for the November Ballot, but up zoning wasn't. Who makes the decisions?
- Can we zone for/build more housing to exceed the target?
- What are resources I can consult to learn more about the RHNA process, specifically to understand how South Pasadena's RHNA number compares to that of other communities?

Hearings

City staff and their consultant, PlaceWorks, presented at multiple public hearings at different points in the update process prior to release of the public draft Housing Element.

July 21, 2020

City staff and PlaceWorks presented to the Planning Commission at their meeting on July 21, 2020. The presentation covered the City's RHNA allocation, sites analysis and options for addressing the identified RHNA shortfall, options for inclusionary housing policy and ADU regulations, and potential options for increased density and height to accommodate additional housing. Information on potential changes to allowed density and height on specific sites was studied and presented. The following questions and input were received from the Planning Commission:

- Provide additional explanation of what moderate and above moderate RHNA means
- Has staff considered studying the Pavilions site?
- One consideration is changing what is allowed in single-family areas versus increasing the height limit in other areas
- Has staff looked at the stables site?
- Should think about a road diet on Monterey Road
- Consider street parking in the ADU regulations
- Could pre-approved ADUs include pre-fabricated units? It seems like they would be more affordable

- Are there precedents and incentives for converting market rate units to affordable units?
- What about the Caltrans properties?
- What about condo version to market rate then to affordable housing?
- Showing partial site redevelopment of Vons and Ralphs sites as the baseline condition with full redevelopment with density and height increases is misleading. If this is the approach needs to be supported more.
- Amount of parking provided for the precedent projects versus what would be required under South Pasadena's regulations?
- Wondering about the illustrative examples show versus the sites/areas a ballot measure to increase height would actually apply to
- Has City had conversations with the owners of all of these sites?
- Can regulations regarding height and zoning be adjusted after the Housing Element is adopted?
- Do Density Bonus units count towards the RHNA?
- Seems weird to have a ballot measure to increase height before the Housing Element.
- Will the RHNA change?
- Seems like the City would be forced to build more small units
- Makes sense to have less parking at the Gold Line Storage sites. Connect with the Downtown Specific Plan and General Plan and do that with all the 5 sites.
- Transit access to each of the 5 sites needs to be looked at
    - Ralphs site should be good, there are multiple bus lines
    - Ostrich farm site – not sure if there is sufficient transit access
- Increased density can add economic benefit/energize the area, just one edge might not make sense
- Premature for a height ballot initiative, the tail is wagging the dog
- Should fight the RHNA
- State Density Bonus – allows increased height
- South Pasadena isn't alone in facing a large RHNA increase
- The Council and the Mayor Pro Tem have personally written to and spoken with SCAG and state legislators and they aren't getting any traction on changing the RHNA
    - Alhambra – 6,000 + unit RHNA
    - San Marina – 398 unit RHNA
    - Beverly Hills – 3,096 unit RHNA
- The area a height increase applied to could be less site specific – a wider area
- More study is needed ahead of a ballot measure on height, leaning towards not recommending
- Supportive of strategic increased heights but thinks we aren't there yet, not enough time to make a decision to have a ballot measure ahead of the deadline for the general election. Not supportive of sending to City Council for November ballot
- Supportive of need to reconsider height limits
- Housing need is critical

- The consideration of height increase needs to be more thoroughly vetted, can't support at this time

Three recorded voicemail comments were received:

- First voicemail comment - SPRIG
  - Need an alternative that accommodates the RHNA within the 45-foot height limit
  - They gathered 67 signatures – don't want height increase
- Second voicemail comment
  - No height increase
  - Concerns about water, sewer, and electricity
- Third voicemail comment
  - Opposed to height-limit increase
  - Confirmed they had also submitted written comment

August 5, 2020

City staff and PlaceWorks presented to the City Council at their meeting on August 5, 2020. The presentation focused on the consideration by the Planning Commission at their July 21st meeting of recommending to the City Council to place a ballot measure to propose allowing increased height on the November ballot. Staff reported that the Planning Commission did not recommend moving forward with the ballot measure at this time. Staff also presented regarding a potential RHNA appeal by the City.

August 11, 2020

City staff and PlaceWorks presented to the Planning Commission at their meeting on August 11, 2020. New analysis and information was presented about specific sites studied for potential height and density increases, following up on the presentation at the July 21st meeting. Updates included information on transit accessibility of candidate sites, parking ratios for precedent examples, and the addition of one site for consideration for potential height and density increases.

The following questions and input were received from the Planning Commission.

- Regarding Ostrich Farm Area:
  - Why not include parcels to the east of the vacant site?
  - Ostrich Farm area is appropriate, without needing to be as surgical as elsewhere
  - Need to look at how to make Ostrich Farm more of a complete neighborhood
  - Can it connect to Highland Park?

- Regarding Meridian Property:
  - Be careful to recognize historic district
  - Be careful not to overwhelm surrounding historic structures with additional height
  - Agree with sensitivity towards Meridian site
- Comments regarding sites in general:
  - Vons, Ralphs, and Ostrich Farm are good opportunities
  - Generally, site locations seem pretty smart
  - Concern about putting a lot of units in far corner of the city
  - Traffic and parking should be a top consideration
  - Traffic and parking analysis need to go hand in hand with these sites
  - Look at what State density bonus law means when considering additional heights
  - We need to build more housing
  - Presentation materials are going to be key pieces when communicating to residents
  - How much time do we have to make zoning changes outlined in Housing Element?
  - Does a height increase need to be in place at adoption of Housing Element?
  - What is required to prove redevelopment potential of a non-vacant site?
  - Question regarding ADU production target; answered that City will have to include aggressive programs
  - What does it mean if we don't raise heights? (need to explain to the public)
  - Is there a way to raise heights without going to the voters?
  - Can City get credit for units built in excess over prior Housing Element cycle?

September 8, 2020

City staff and PlaceWorks presented to the Planning Commission at their meeting on September 8, 2020. The focus of the presentation was ADUs and options for supporting that housing type in the City as part of the Housing Element and ongoing City programming. Staff was specifically seeking input on update to the City's ADU zoning regulations and consideration of policies and programs to include in the draft Housing Element.

One recorded voicemail comment was received:

- City talked about ADU projection methodology at the July 21st Planning Commission meeting. Doesn't see that in the presentation this time.

The following questions and input were received from the Planning Commission:

- Will objective design standards be part of the near-term ADU ordinance update?
- Are the projected ADU numbers changing?
- Some ADU updates should be made now and maybe some later – before or after Housing Element adoption. The items to do later would be the more aggressive measures.
- Address parking problem related to ADUs
- Okay with duplex, deed-restriction ADU idea
- All were supportive of amnesty program.
  - One commissioner asked: Why does it need to be limited to non-historic properties?

- Yes, City should streamline planning and building review process
- Yes, supportive of homeowner assistance – guide to ADU development process
- Supports fee reductions for affordable ADUs
- Okay with ADU monitoring, but some concerns about staff time resources
- Okay with education and promotion around ADUs. Supportive of proactive/targeted outreach to certain neighborhoods and areas with larger lots
- Supportive of allowing two detached ADUs as long as there is enough room on the parcel for open space
- Concerned about streamlining impacts on staff workload. Should have as many standard ADU building types as possible. One-stop shop is a good idea.
- If City allowed two detached ADUs on a parcel could they require parking?
- Should include pre-fab ADU units – important for education program
- Should include costs and sources for loans in education and promotion program
    - City of Pasadena is offering two types of loans to encourage ADUs
- Careful who gets included on the list of resources (builders, etc.). Don't want to unfairly support or not support someone.
- Could tie education and promotion to streamlined approval
    - Homeowners could provide case study materials about the process, costs, how it went for them
- Could have objective criteria for which builders/others get included on the resources list

December 15, 2020

City staff and PlaceWorks presented to the Planning Commission at their meeting on December 15, 2020. The presentation focused on additional design and economic analysis PlaceWorks prepared for certain sites to understand what types of housing projects would be feasible and acceptable on those sites and how changes to the City's General Plan and zoning related to density would relate to what is allowed under State Density Bonus law. The additional focused most on the Vons site.

January 26, 2021

City staff and PlaceWorks presented to the Planning Commission at their meeting on January 26, 2021. The meeting focused on the proposed Inclusionary Housing Regulations. Supporting information was presented regarding analysis of height and density on certain sites, following up on earlier meetings, in particular, the December 15, 2020, meeting.

May 26, 2021

City staff and PlaceWorks presented an update on the Housing Element process to the Planning Commission at their meeting on May 26, 2021. No public comments were made during the meeting. The following summarizes the input and questions from the Planning Commission:

- Was the City concerned by HCD's preliminary review of some of the Housing Element sections?
- Asked about thresholds for sites analysis.
- Asked about the overlay described in Table VI-4 and details of the proposed zoning column.

- Mentioned public comment from Josh Albrektson from the previous Planning Commission meeting, not to forget it.
- What happened at the EIR scoping meeting?
- Thinks the City is being too optimistic about the analysis of the sites. Should remove small and steep single-family sites. In general, overly optimistic in all categories including ADUs, vacant and non-vacant sites.
- Multiple commissioners agreed yes, density increases are needed.
- Should ask other cities for ideas of how to meet the RHNA, need some magical solutions.
- Do City-owned sites included in the Housing Element have to be surplus?
- Does not want to include the ballfield or stables as Housing Element sites.
- Can the affordable housing production program be strengthened?
- Generally concur with strategies that were in the preliminary draft programs submitted to HCD.
- Would like another chance to review sites at the time of the public draft.
- Could there be some sort of "pre-permit program" for ADUs as a way to gauge interest in ADUs?
- Would it be possible for the planning commissioners to do a driving tour some of the sites?
- Interested in the church sites strategy.
- Likes the idea of redoing the City Hall site.
- Could the parcels by war memorial building on Fair Oaks possibly be added to the inventory?
- Can existing units be rehabilitated and counted towards the RHNA?
- Multiple commissioners said yes to the affordable housing overlay.
- Don't rule out all historic sites.
- Should increase densities in Ostrich Farm and Downtown.
- Should put increasing the citywide height limit back on the table and continue the community conversation.
- Will minimum densities be put into place?
- Raising height limits on certain properties should be considered.
- Multiple commissioners felt the sites to receive the affordable housing overlay will be competing with state density bonus in terms of incentivizing actual development. The overlay should be calibrated to produce results.
- In favor of affordable housing overlay but not as spot zoning.
- Feels the City doesn't have enough staff capacity to implement all of the proposed Housing Element programs. There is a long wait time for processing applications for ADUs. Need dedicated housing staff.
- Maybe strategy for projecting ADUs can be to project numbers annually – make more specific – year 2, year 3, etc.
- Can the parcel assemblage program work in conjunction with overlay zoning?
- They have done lot consolidation on hillside sites. There was an example of this from the previous Planning Commission meeting.
- Should spend time justifying the ADU projection number.

- Have demolitions of affordable units been an issue in South Pasadena?
- What the EIR is evaluating is a moving target, can't really finish the analysis yet.
- Please post the PowerPoint for this meeting.
- Need to get the word out to the public that the comment period is coming.
- History and context information in the Housing Element will be very helpful.
- There should be more aggressive publicity about the ADU amnesty program.
- Supportive housing for those with disabilities is needed.

October 12, 2021

City staff and PlaceWorks presented to the Planning Commission on the Public Review Draft Housing Element at their meeting on October 12, 2021. The meeting focused on the release of the 2021-2029 public review Draft General Plan Housing Element. Public comments included:

- 95% realistic capacity because of density bonus?
- No analysis of inclusionary housing regulations?
- ADU projection numbers are too high

The following summarizes the input and questions from the Planning Commission:

- Which programs are state mandates, which are continuing from previous Housing Element? Please present this at the Oct 21st community workshop.
- Asked for clarification on state requirements regarding Senate Bill 9
- Asked for more context for regarding the level of input sought from the community at this point in the process.
- Need to explain RHNA and why the number is high.
- The Planning Commission requested an informational update at their Nov 9th meeting, including HCD comments if possible.

November 9, 2021

City staff and PlaceWorks presented to the Planning Commission on the Public Review Draft Housing Element at their meeting on November 9, 2021. Four members of the public commented. These comments included:

- The City should have a requirement to hire local skilled workforce – both for reducing environmental/AQ/VMT impacts and for local jobs. The City of Hayward recently put this type of policy/requirement in place.
- Is the City applying for any state funding programs mentioned in the Housing Element programs?
- The ADU projection numbers are wildly optimistic.

The following summarizes the input and questions from the Planning Commission:

- Projected ADUs are only 20% of City's RHNA
- Is more than 50% of lower income RHNA being accommodated on non-vacant sites?

- Are there regional or nearby examples of projects - could any of that analysis or examples be strengthened/added to?
- The majority of the Planning Commission expressed concerns over the public's potential reaction to the rezoning and density changes included in the Draft, as well as the potential confusion about what the City is doing.
- Suggested strengthening the information in the water quality section of the Assessment of Fair Housing
- Asked for clarification about ADU track record information in the draft
- Could a program be added to close the gap between planning approvals and building permits?
- Could a program be added to work with prospective ADU applicants – ombudsman/mentor/technical assistance?
- Staffing and staff retention are critical to implementing the Housing Element programs
- Understand based on analysis presented earlier in the Housing Element project that the densities/units assumed in the HE will lead to bulkier buildings with smaller units if there is no density bonus/height increase for the project
- For rezoning, would be helpful to know what percent of the City will require rezoning?
- Agrees with public comment re: local skilled workforce and VMT reduction. Would be good for South Pasadena to have a local workforce requirement.
- Suggested more public outreach, with an emphasis on going to the people, and enhancing the site maps.
- What about the Caltrans housing?
- Some cities are fighting the RHNA
- Many of the regulations from the state in the Housing Element are impossible to meet
- Are many SCAG jurisdictions going to be in compliance?
- Sites maps could be better, add a legend/key. Note whether a site is vacant or non-vacant.
- Thinks the City has been doing a good job of getting the word out to the public about the project

November 17, 2021

City staff presented to the City Council on the public draft Housing Element at their meeting on November 17, 2021. No public comments were made during the meeting. The following summarizes the input and questions from the City Council:

- Does the Monterey Road site (Site #3 in Appendix A) have an approved project?
- Ostrich Farm sites – what input has been received from property owners.
- Asked about the Carrow's site.
- Can the densities proposed in the draft fit within the 45 foot height limit?
- When will the aggressive ADU amnesty program happen?
- Is the City considering objective design standards to implement SB 9?
- Could SB 10 apply to only one parcel?
- Impressed with staff and the outreach that has been done to property owners. Thinks they've gone a long way toward addressing any controversy in the community.

- Amazing that there was no public comment at this meeting.
- The RHNA formula was unfair to South Pasadena.
- The Executive Director of Move LA was concerned about the RHNA approach related to High Quality Transit Corridors (HQTCs). Communities don't want HQTCs identified in the future because they will receive higher RHNA numbers because of them.
- Staff and consultants – good job addressing this complex topic.

May 10, 2022

City staff presented to the Planning Commission on the 2nd Public Review Draft and discussed the revisions made to the new draft (in person/virtual hybrid format).

July 20, 2022

City staff presented to the City Council on the HCD review letter for the 2nd Draft Housing Element.

July 26, 2022

City staff presented at the Planning Commission on the HCD review letter for the 2nd Draft Housing Element.

November 9, 2022

The City's Housing Element consultant presented at a Joint City Council and Planning Commission. The presentation included an overview of the California Department of Housing and Community Development's response letter regarding the Third Draft Housing Element, discussed anticipated responses to address the comments in the letter, and received feedback from the community, Planning Commission, and City Council on the comments and proposed responses.

February 1, 2023

The City's Housing Element consultant provided a summary of HCD's review letter regarding the 4th Draft Housing Element to the City Council and presented options for addressing remaining comments, including missing middle housing, identification of additional city-owned sites for lower income homes, increased zoning capacity along arterial corridors, and tenant protections.

February 9, 2023

This meeting was intended to be a community meeting focused on the Housing Element, but a majority of the City Council wanted to attended so was noticed as a City Council meeting. The meeting was conducted as a workshop to further discuss revisions to the Housing Element and collect resident feedback.

February 15, 2023

City staff and the City's Housing Element consultant presented refined ideas for addressing remaining comments based on feedback received from the Council and community over the preceding two meetings. Staff rreceived direction from City Council and Planning Commission on how to revise the Housing Element.

Written Public Comments

Received Prior to Public Draft

The City received the following written public comments prior to the release of the Public Draft Housing Element.

Mr. Matthew Gelfand on behalf of Californians for Homeownership (August 9, 2020) expressed concern over staff report indication that City does not currently allow ADUs within the Mission Street Specific Plan area. Mr. Gelfand noted that such a policy is unlawful, citing State code, GC 65852.2.

Mr. Matthew Gelfand on behalf of Californians for Homeownership (August 13, 2020) expressed satisfaction with the recent Planning Commission meeting where the City Attorney confirmed that the City is required to allow ADUs in the Mission Street Specific Plan's Districts that allow residential uses. Mr. Gelfand stated that during a Planning Commission meeting, staff suggested the definition of 'public transit', under the state ADU law, is limited to major transit stops. Mr. Gelfand states that this is not true and provided a citation for ADU state law, Gov Code 65852.2(j)(10). Mr. Gelfand states that the City does not have a parking problem, it has a "driving problem". Mr. Gelfand believes that reducing parking will actually alleviate traffic. Mr. Gelfand states that parking is meaningless in consideration of citywide. high access to transit. Mr. Gelfand states that the City's proposal to count 1,000 ADU units toward its RHNA allocation is preposterous; however, the City's plan to incentivize ADU development is taken seriously. They feel it will result in a modest increase in ADU production.

Leonora Camner, Executive Director of Abundant Housing LA, and Anthony Dedousis, Director of Policy and Research of Abundant Housing LA, regarding Preliminary Sites Analysis from the July 21, 2020 Planning Commission Agenda Report (September 4, 2020). Ms. Camner and Mr. Dedousis identified major issues in the Preliminary Sites Analysis, including:

1. The report appears to treat new housing capacity (i.e. the potential for new housing) as equivalent to realistic housing production (i.e. actual new housing). This is incorrect; they are not the same thing.

2. The report contains extremely optimistic forecasts of future ADU production which are extremely unlikely to be achieved even with aggressive policies, based on recent development trends.

3. The Preliminary Sites Analysis for lower-income housing is unlikely to meet California's standards for affirmatively further fair housing.

4. By accommodating insufficient housing growth to meet the RHNA targets at each income level, the Preliminary Sites Analysis is likely to fall afoul of the No Net Loss requirement.

They conclude their letter noting that Abundant Housing LA (AHLA) published a detailed memo, "Requirements and Best Practices for Housing Element Updates: The Site Inventory", explaining the key legal requirements and AHLA's recommended best practices for housing element updates. They offer availability to discuss our concerns further, and offer recommendations for additional policies to incorporate into South Pasadena's Housing Element Update.

Dr. Josh Albrektson (via email to HCD, February 25, 2021) informed HCD that they would receive a letter from Abundant Housing LA, YIMBY Law, and others regarding South Pasadena's current Housing Elements plans. Dr. Albrektson claims the City is not following any of the rules in the HCD's

June 10th memo. Dr. Albrektson states the City is going to HCD for a review soon, so Dr. Albrektson wanted to give HCD some local knowledge. Dr. Albrektson states that the City is passing an ADU ordinance that will make it harder to build ADUs. Dr. Albrektson states that in the fire zone, they will require all ADUs to be within 150 ft of the front property line, have sprinklers, and for all garage and structure conversions the parking lot must be replaced.

Dr Josh Albrektson (March 8, 2021) provides a list of six issues he identified as "illegal" in the preliminary draft Housing Element sections, referencing a Housing Element Memo he states the City does not comply with. Theses issues are:

1. Claiming a projection of 1,000 ADUs in the Housing Element.

2. Objective design standards versus subjective design guidelines for ADUs and what really qualifies as an objective standard.

3. It is illegal to backdate an ordinance or apply it to projects that have completed a pre-application checklist. This comment related to the City's inclusionary housing ordinance and the definition of "deemed complete."

4. Inclusionary units and density bonus cannot be used to count for RHNA units in the Housing Element. The analysis MUST use the base zoning.

5. The inclusionary housing ordinance will cause a significant drop in realistic development capacity.

6. AB 1505, regarding rental inclusionary housing, commenter provided a link to an HCD 2019 memo about this law.

Dr. Albrektson concludes with stating that South Pasadena will not produce a compliant Housing Element due to not following HCD's guidelines. Dr. Albrektson states that there are more reasons other than what he listed for which he predicts HCD will reject the City's draft element.

Abundant Housing LA (March 10, 2021) references a past 2020 letter the organization sent to the Mayor and identifies five concerns, some of which are carried forward from the 2020 letter, about the City's preliminary draft Housing Element sections. The five major concerns are:

1. Planning's process for selecting sites and assessing their capacity fails to account for parcels' likelihood of development, and its map of best candidate sites appears to include many sites where redevelopment is extremely unlikely.

2. Planning continues to make overly optimistic forecasts of future ADU production which are unlikely to be achieved even with aggressive policies.

3. Planning misinterprets a SCAG analysis of regional ADU affordability to suggest that a significant share of future ADUs in South Pasadena will be affordable to lower-income households, which is unlikely based on local rent data.

4. Planning indicates that the proposed Inclusionary Housing Ordinance will help the City achieve its lower-income RHNA targets without a clear assurance that this ordinance will be accompanied by adequate zoning densities.

5. Planning fails to affirmatively further fair housing and break existing patterns of residential segregation in their site selection and their general approach to the housing element update, despite the City Council's recent adoption of a resolution to acknowledge "past practices of institutionalized racism" and a commitment to being an inclusive community in the present.

The organization provides recommendations for each identified concern for the City to consider.

Dr. Josh Albrektson (via email to HCD, April 12, 2021) introduced himself and summarized past public comments he has provided to the City about the Housing Element. Dr Albrektson indicates when he believed the City's actions were in conflict with State housing law and/or other guidance from HCD. The time frame of his comments range from July 2020 to April 2021.

Dr. Josh Albrektson (via email to HCD, April 13, 2021) presenting items he would like HCD to tell South Pasadena regarding its preliminary draft Housing Element sections. The list of points is below:

1. ADU estimates must be realistic.

2. A 10% Low and 10% VLI inclusionary housing requirement is a significant governmental constraint to housing and that must be accounted for in the realistic development capacity calculations.

3. Realistic development calculations must include factors like topography [and existing uses meaning that]...realistic development potential for these sites ...should be much less than 50%.

4. All sites included must be realistic. Sites that are currently leasing or have no owner affirmation or city sites that require replacements cannot be included in the sites inventory.

5. All sites included in vacant land list must actually be realistically able to be developed.

6. All sites must include a realistic number of possible affordable units.

7. Provided link to own sites inventory sheet

Dr. Albrektson provides additional information in the email that generally appeared to support his initial points above and offered some new ideas, listed below:

- Development limitations, including the City's height limits and inclusionary housing ordinance are impeding development.
- Market trends indicate multifamily development interest is low
- The City offers "representative project" examples that are dated (from 2005/2017) and would not comply with current laws and are therefore not representative.
- Using inclusionary units and state density bonus is not a substitute for appropriate zoning and is specifically outlawed. What this will actually do is make it so that almost all buildings can no longer be financially viable and nothing will get built in South Pasadena.

Andrew Jarnagin (April 28, 2021) describes what he identifies are three key issues with the City's 5th Cycle Housing Element that should be addressed in the 6th Cycle. These three issues are:

1. Encourage transit-oriented development in the downtown area

2. Remove barriers to affordable housing

3. Provide data to support policy and projections

Mr. Jarnagin offered additional comments for the City's Planning and Building Department. Mr. Jarnagin concludes with questions for the City related to its capacity to support meeting RHNA targets.

Dylan Casey, Executive Director of California Renters Legal Advocacy and Education Fund, (May 5, 2021) commented on the City's ADU ordinance. Mr. Casey states that the ordinance as currently proposed presents numerous conflicts with state ADU standards. Mr. Casey claims that if the Council fails to amend the ordinance to resolve these conflicts, South Pasadena would lose the ability to apply any development standards to ADU permits, and be forced to apply only the state minimum standards. Mr. Casey states that the proposed ordinance is in violation of Gov. Code Section 65852.2, as it would be more restrictive than is permitted under state law. Mr. Casey believes that the City should embrace ADU development and consider its benefits.

Anthony Dedousis, Director of Policy and Research at Abundant Housing LA, (via email to HCD, May 5, 2021), referenced two past letters (September 2020 and March 2021) submitted to City Planning. Mr. Dedousis notes that they have not received a response from City staff and City councilmembers.

Dr. Josh Albrektson (via email to HCD, May 20, 2021) sent information about inclusionary housing ordinance affordability levels recently passed by four different cities to provide a comparison demonstrating that South Pasadena's should be lower. The comparison cities were Pomona, Alhambra, Pasadena, and San Francisco.

Andrew Jarnagin (July 26, 2021) notes that he attended the May 26th, 2021 South Pasadena Planning Commission meeting and reported that HCD's review of the preliminary draft Housing Element sections was discussed in a positive light, which oversimplified the significant changes expected of the Housing Element in order to be in compliance. Mr. Jarnagin provided comments about HCD's informal review of the City's ADU projection and sites inventory. Mr. Jarnagin states that the South Pasadena community should be prepared for a non-compliant Housing Element from HCD. He believes that elected officials and residents must be presented realistic options for RHNA numbers to assess different approaches and determine policies that best align with local desires.

The Steering Committee Members of Our Future LA (September 14, 2021) provided feedback broken down into six focus areas. The focus areas are listed below along with the major topics within each focus area:

1. Protections – tenant protections including just cause eviction protections and enforcement, rent stabilization, tenants' right to counsel, strengthen permanent tenant education, and tenant anti-harassment protections.

2. Preservation – prioritize rezoning in high resource neighborhoods, don't include rent stabilized units in the sites inventory, implement no net loss laws, institute local programs and funding sources to preserve existing affordable housing.

3. Prioritization of Affordable Housing – value capture, create affordable housing on public land, 100% affordable housing overlays including for areas zoned R1.

4. Site Capacity Assessment – likelihood uses will discontinue, realistic capacity, report on progress towards 5th cycle RHNA, include a 15-30% buffer of sites.

5. Affirmatively Furthering Fair Housing – increase concentration of lower income households in areas where concentrations are currently low, reduce concentrations of lower income households in areas of noise or pollution, reduce noise and pollution, invest in historically disinvested areas including place-based strategies, analyze patterns of segregation and discrimination, prioritize site identification in high opportunity census tracts, identify funding and programs to ensure affordable units are built, solicit input on the housing element from all socioeconomic groups.

6. Forecasts of ADU Development – should use safe harbor methodology, provide for mid-cycle adjustments, use city-specific data to forecast affordability.

Our Future LA requested the opportunity to meet with the City to address their concerns in greater detail.

Comments Received on Public Draft

Dr. Josh Albrektson (October 20, 2021) informs the City that he will send in many public comments. Dr. Albrektson states that the Housing Element claims that the inclusionary housing ordinance provides streamlined process and provides benefits above the state density bonus. He believes that neither is true since the density bonus is the minimum required by state and there are no actual incentives or "streamlining." Dr. Albrektson is asking for clarification for the incentives and streamlining stipulated in the inclusionary housing ordinance.

Dr. Josh Albrektson (October 30, 2021) claims they have gone through every moderate and moderate plus site in the Housing Element. Dr. Albrektson informed the City that he created a spreadsheet listing every site that has a "significant problem." He provided a link to the list of sites he has comments on. Problems are specified as sites with no street access, already have homes on them, community parks, and on steep mountainsides. Sites not on the list are appropriate to include by the Dr. Albrektson's standards.

Dr. Josh Albrektson (November 2, 2021) stated that the inclusionary housing ordinance is a significant developmental constraint and listed his issues with the ordinance. Dr. Albrektson stated that the there was no feasibility study done and that the City was using it to fulfill their RHNA allocation. Dr. Albrektson compared the inclusionary housing ordinance to other jurisdictions in the State. Dr. Albrektson states that the Housing Element cannot be considered compliant as long as the inclusionary housing ordinance is in place. He states that it needs to be repealed and replaced with a researched feasibility study and warns that as long as the inclusionary housing ordinance is in place, nothing will be built in South Pasadena.

Dr. Josh Albrektson (November 2, 2021) stated how the City's projection of 297 ADUs in the next 8 years is unfounded and lacks the data to support the claim. He discussed flaws in the Housing Element's calculations of ADUs because they used building permit data from 2019 and 2020 prior to the adoption of two ADU ordinances, which are expected to make ADUs more difficult and expensive to build. He states this will result in only a small fraction of homes in South Pasadena that can build ADUs. Dr. Albrektson stated that future ADU development will be limited (due to the ordinances) and that the Housing Element's ADU projections are incorrect. He claims that the 2020 and 2021 increase in ADUs is more a matter of demand from the effective ban rather than a sustained trend.

Dr. Josh Albrektson (November 2, 2021) provided comments on the draft Housing Element programs in Chapter 6.8 of the Public Review Draft Housing Element.

- Program 1.d Assisted Housing Unit Preservation – The City doesn't have any deed restricted affordable housing so how can the City monitor and why are there quantified objectives included to preserve this type of unit?
- Program 2.a Provide Technical Assistance for Projects with Affordable Housing – More actual commitments are needed in this program. Suggest adding streamlining with specific timeframes and automatic approvals. Current city average is more than 2 years from initiation to building permit approval for multifamily projects.
- Program 2.b Affordable Housing Production – No affordable housing projects have been submitted or considered through SGVRHT and the city has been a member for multiple years.
- Program 2.c CalHome Program – There is no such thing as a poor South Pasadena homeowner.
- Program 2.d Section 8 Housing Choice Voucher Program for Rental Assistance – He thinks the City should commit to more than just posting information on their website. Dr. Albrektson doubts that there are any Section 8 vouchers in use in South Pasadena.
- Program 2.e Facilitate Density Bonus for Projects with On-site Affordable Housing – Dr. Albrektson thinks the timeline for this program should be much sooner. He says projects that have been approved in the City have been delayed and he believes the city could process this type of approval more effectively.
- Program 2.j General Plan Affordable Housing Overlay – Dr. Albrektson said that allowing 30 units per acre via the proposed overlay in areas that already allow 24 units per acre isn't sufficient incentive for applicants to include affordable units in their projects. He stated that in order for this overlay to work as an incentive it must give the applicant more height or density. He mentioned the City of Berkeley's affordable housing overlay as an example.
- Program 2.l Facilitate Affordable Housing on City-Owned Property – Dr. Albrektson referenced comments he made on this program in another comment he submitted.
- Program 3.d Enable Parcel Assemblage – Dr. Albrektson thinks more incentives need to be included with this program.
- Program 3.f Allow and Facilitate ADUs – Dr. Albrektson stated that the city currently takes over 4 months to process ADU applications. He also said that it is difficult to find the ADU brochure on the City website. He commented that the recent changes to the City ADU ordinance make it impossible to use prefabricated ADUs on historic properties which make up 60 percent of all single-family homes in South Pasadena. In addition, he thinks that the terrain in the Monterey Hills wouldn't allow for use of pre-fabricated ADUs. He also noted that he doesn't believe this program or the other programs related to ADUs will increase ADU production.
- Program 3.j ADU Amnesty Program – Dr. Albrektson states that no one will make an ADU deed-restricted for affordable households in exchange for the waiver of $160 in city fees.
- Program 3.l Increase and Maintain Planning and Housing Staff Resources – Dr. Albrektson states the things called for in this program should be a basic function of a city. He states that the City's planning staff works too much and should be compensated more and turnover is high. He requests that this program commit to increasing salaries for the city staff positions mentioned in this program.
- Program 3.m Implement SB 9 and SB 10 – Dr. Albrektson thinks the program should be rewritten related to SB 10 with a better understanding of the law. He states that the City Council has spoken out against SB 9 and SB 10 and they will never be enacted in South Pasadena. Related to the parcels in the moderate and above-moderate sites inventory with 2 units assigned to them

due to SB 9, he states that the City should include a requirement to eliminate single-family zoning on non-historic properties with a specific deadline if the city wants to claim these units in case SB 9 is overturned.

- Program 4.c Flexible Zoning Regulations – Dr. Albrektson states that the city's zoning regulations are not flexible.

Dr. Josh Albrektson (via email to HCD, November 4, 2021) stated that City staff planner Liz Bar-El (in an email she sent to HCD) compared the inclusionary housing ordinances of South Pasadena and Pasadena and said that they were the same because both jurisdictions have a 20% inclusionary requirement. Dr. Albrektson claims that South Pasadena has a much deeper affordability than Pasadena, which is significantly different because rental costs contrast for a moderate and very low income homes. Additionally, the commenter said that Pasadena has much less significant developmental limitations than the City of South Pasadena.

Dr. Josh Albrektson (November 8, 2021) provides an in-depth personal analysis of the Draft Housing Element. His analysis is over 100 pages and provides a detailed examination of each section under the scope of Dr. Albrektson's critique. Throughout this analysis, Dr. Albrektson references emails he's sent in the past.

Dr. Josh Albrektson (November 12, 2021) stated that the City is implementing a new HVAC and VOiP Phone system into City Hall in 2022 and 2025 at a cost of $360,000 and $480,000, respectively. Dr. Albrektson stated that the City is also spending over $200,000 for security enhancement. He claims that this is strong evidence that there are no plans to have the current use of city hall end in the 6th cycle.

Anthony Dedousis, Director of Policy and Research of Abundant Housing LA (November 14, 2021) states that their letter is a joint response from Abundant Housing LA and YIMBY LA. They claim they submitted a comment letter in April 2021 and highlighted inconsistencies in that original email. They stated that the new draft does not meaningfully address their previous comments. They believe that the new draft of the Housing Element is not consistent with HCD's instruction, does not comply with AFFH requirements under AB 686, and does not include programs with concrete actions to facilitate housing production. They state that there are 6 issues that remain unaddressed in this Housing Element, including:

1. Planning's process for selecting sites and assessing their capacity fails to account for parcels' likelihood of development, and its draft site inventory includes many parcels where housing development is extremely unlikely.

2. Planning has counted many vacant sites towards the moderate and above-moderate income RHNA targets, despite their unsuitability for housing production.

3. Planning has made an overly optimistic forecast of future ADU production which is unlikely to be achieved even with aggressive policies.

4. Planning misinterprets a SCAG analysis of regional ADU affordability to suggest that a significant share of future ADUs in South Pasadena will be affordable to lower-income households, which is unlikely based on local rent data.

5. Planning's proposed Inclusionary Housing Ordinance is unlikely to achieve a significant portion of the lower-income RHNA targets, due to the economic infeasibility of redevelopment where high set-aside percentages apply.

6. Planning fails to affirmatively further fair housing and break existing patterns of residential segregation in their site selection and their general approach to the housing element update, despite the City Council's recent adoption of a resolution to acknowledge "past practices of institutionalized racism" and a commitment to being an inclusive community in the present.

Both organizations have three additional concerns with the Draft, including the forecast of future ADU Production, No Net Loss Buffer, and Fair Housing Issues and AFFH Compliance.

Dr. Josh Albrektson (December 14, 2021) claims it has taken too long for a multifamily housing project to be approved. Dr. Albrektson states that it takes about two and a half years from the day it was presented to the planning department to the first chance at approval. Dr. Albrektson claims there have also been requests for redesigns, as well as delays from the City.

Sonja Trauss, Executive Director of YIMBY LAW and California YIMBY (February 28, 2022) provided their policy recommendations for 6th Cycle Housing Elements. They noted that the policies and programs section of the city's Housing Element must respond to data, analysis and findings presented in the Housing Needs section. They made specific policy recommendations in 5 categories that are summarized below:

1. Affirmatively Furthering Fair Housing
    a. Prioritize rezoning in high resource, historically exclusionary neighborhoods.
    b. Establish a strong tenant protection ordinance so that new housing benefits everyone.
    c. Support homeownership opportunities for historically excluded groups. The housing element should identify opportunities to create a variety of for-sale housing types and create programs to facilitate property ownership among excluded groups.
2. Site Capacity
    a. Adequately plan for density. Ensure that a site's density will accommodate the number of homes that are projected to be built. In addition, make sure height limits, setback requirements, FAR, and other controls allow for adequate density and the ability to achieve a site's realistic capacity.
    b. Provide sufficient zoned capacity to accommodate all income levels, including a minimum No Net Loss buffer of 30%.
    c. Use data from the 5th Cycle to calculate the likelihood of development for your 6th Cycle site inventory.
3. Accessory Dwelling Units
    a. Commit to an automatic mid-cycle adjustment if ADU permitting activity is lower than estimated in the housing element.
    b. Incentivize new ADUs, including those that are rent-restricted for moderate or lower-income households or that are prioritized for households with housing choice vouchers.
4. Zoning
    a. Allow residential to be built in areas that are zoned for commercial use.
    b. Allow flexibility in inclusionary zoning.
5. Better entitlement process and reducing barriers to development
    a. Ensure that the city has a ministerial process for housing permitting, especially multi-family housing, and remove impact fees for deed-restricted housing.
    b. Reduce parking standards and eliminate parking minimums.
    c. Cap fees on all new housing.

d. Provide local funding. There are three new revenue streams that should be considered: 1) Transfer tax, a one-time payment levied by a jurisdiction on the sale of a home, may be utilized to raise much needed revenue to fund affordable homes; 2) Vacancy tax may be collected on vacant land to convince landowners to sell their underutilized properties and be used to fund the construction of affordable homes; 3) Commercial linkage fees should be adopted or revisited for increases on new commercial developments.

Anne Bagasao/John Srebalus (May 2 2022)

Our comments are primarily focused on 6.4 Fair Housing Assessment.

1) 6.4.1 Outreach

We question the validity of the data collected in community meetings during the Spring and Fall of 2020. South Pasadena residents and city staff were in the throes of a global pandemic. After delaying this process for two years, the City, in all it's wisdom, determined that the best time to ask for public participation on the Housing Element was two months into an internationally unprecedented health and economic crisis.

At this time, South Pasadena Tenants Union was hyper focused on keeping South Pasadena tenants in their homes with little or no help from the city's contracted agency Housing Resource Center. The City planning department and City Manager's instead of trying to help tenants, were busy scheduling important data collection surveys and meetings that would impact the future of South Pasadenans for decades to come. This was extremely poor planning on behalf of the City as many of us were scrambling to find the capacity to shift mental gears away from how to avoid getting sick to addressing the complexities of RHNA numbers and development in our city. We are not satisfied that City outreach to residents was adequate and therefore not accurate. As evidenced in the poor response to these surveys and attendance at meetings that were exclusively available to those with internet access in their homes, computers or mobile devices, we submit that your assessment data is insufficient and therefore your assessment is flawed.

It is stated that outreach was done online and through emails however both John and I were either excluded from participation or were not kept in the loop. We recall that in September 2020, an email was sent to Planning Director Joanna Hankamer with a copy to all members of the Council, Margaret Lin and Arpy Kasparian. Concurrently, similar community meetings were being conducted by the City regarding the Climate Action Plan. I remarked in my email dated 9/30/2020 that I was impressed with the content and frequency of the email contact from the City regarding the Climate Action Plan meetings. The majority of South Pasadenans ,who would be able to provide the most valuable input with regard to affordable housing needs, were managing unemployment issues, homeschooling and health issues. The City is well aware of the advocacy and work that South Pasadena Tenants Union, CareFirst and CalTrans Tenants United invest voluntarily and passionately into housing issues in our town. It is inexcusable, that the City did not ensure that we were at every meeting and could have easily emailed us directly as everyone in Planning and on the Council has our contact information on hand.

In the Outreach Summary section of 6.4.1 the document states that "feedback was received from members of the public, stakeholders, elected officials and others." South Pasadena Tenants Union and CareFirst are the viable stakeholders in issues of affordable housing, the homeless and low income households. The Housing Element document fails to identify these "stakeholders" referenced in 6.4.1. If the purpose of this plan, which I understand has cost us tens of thousands of dollars and hundreds

of hours of staff time, was to produce the best possible housing element, why did the City not go out of its way to make sure that we were at 100% participation?

In my email addressed to Joanna Hankamer, et al. on 9/30/2020 I mentioned that real estate development interest group Abundant Housing LA was actively recruiting non-South Pasadenans to attend the meetings to push the pro-development anti-affordable housing agenda. While SPTU was not in attendance because we were busy keeping South Pasadenans housed and the homeless cared for, Abundant Housing LA mouthpieces were at the table affecting housing policy in South Pasadena. Abundant Housing LA went so far as to take out sponsored social media ads to encourage their members from Los Angeles to infiltrate our community meetings. Of the attendees at the Fall workshop, to which you are using data to support your assessments, 10% were identified as Abundant LA members.

In July 2020, Mayor Khubesrian called a private meeting with four residents to discuss the housing element. Two were from CareFirst and only one member of South Pasadena Tenants Union was invited. The fourth was Josh Albrekston. The discussions in these meetings were not made public. Does the City or any of the consultants know if content from discussions in that meeting were used to form the Housing Element documents in any of its forms? If so, it should be disregarded because it was no part of public record. To my knowledge, City Manager Stephanie De Wolfe and Joanna Hankamer were in attendance but no other members of the Council.

On March 3, 2021 the City was to have posted the revised Housing Element for public review before closing for the weekend starting on March 5th. I received a message from Joanna Hankamer at 11:09 on March 5th that the agenda was delayed.

Conclusion:

When you come to the public and ask for our help but then don't make a good effort to provide us with the resources to participate, we question the commitment of the City in seeking community input. We should not have to chase down City staff to be able to participate. The City should make public participation as accessible as possible by ensuring that every resident is informed, and informed again, and that all stakeholders are at the table before moving forward with assessments and data and reports that claim to represent public interest.

We will not legitimize the Housing Element with our further analysis and feedback and demand more public input. We do not accept your findings as a true representation of housing needs in South Pasadena. Also, much of the data is over two years old. Much has changed. Much has changed.

Josh Albrektson (May 2, 2022)

This Housing Element doesn't address the main problems HCD had with the October Housing Element. For everything related to the 2017 laws and the 6/10/2020 HCD memo there is no significant difference between this draft and the October draft. It doesn't show how 65 to 70 DU/Acre is achievable under the base zoning of South Pasadena, it doesn't show how the highest inclusionary housing element in the state affects feasibility, and it doesn't address the timeline and how it takes multiple years to approve multifamily homes.

It also is unchanged in the Above Mod/Mod category even though there are multiple claimed units on hillsides and backyard tennis courts that due to environmental constraints homes can never be built.

It includes the three grocery stores and business park that SoPas was told to remove. And it goes from assuming 297 ADUs to 318 ADUs even though HCD told South Pasadena it should be around 10 ADUs per year. There also was none of the outreach performed that HCD told South Pasadena they were required to do and none of the public comments was address in the Housing Element. This Housing Element completely ignored all of the problems that HCD had with the October Housing Element and will be rejected just like that one was. Of note, I sent an e-mail on March 18th that was much more extensive regarding the October Housing Element. Everything in that e-mail still applies to this new Housing Element draft --

Josh Albrektson MD

Crime fighter by day

Delaine W. Shane (May 2, 2022)

Dear Honorable Mayor and Council Members:

I appreciate the opportunity to comment on the subject document; however, a frank discussion of what really is at stake beyond this documentation is even more important. South Pasadena cannot simply stand by and do whatever the State dictates on housing, while not equally judging the truly complex intricacies, relationships, and outcomes of water supply/drought, climate change, unequal economic/social justice issues, misguided actions that harm historic preservation, and minimizing fiduciary responsibility regarding the sale of Caltrans properties.

I fully understand the constraints that this subject document must adhere to as based on recent legal state mandates, and yet we cannot divorce ourselves from other planning and environmental areas that clearly interact with the proposed draft Housing Element. All documentation should be discussed in unison instead of separating the Housing Element from the General Plan Update, the Specific Plan Update, Zoning modifications, Environmental Impact Report, and even the already approved Climate Action Plan. It is a complex undertaking to plan the City's future when there are so many aspects to consider. All sides of this debate on housing must be heard; these plans are so vital to the City's development for the next 20 to 30 years in the long-term and even more so in the short-term within the next eight years.

My comments are divided into two sections: general perspective for your consideration and specific comments on the subject document for the planning consultants. Yes, the State long ago forcefully told our community that we residents must prepare for a freeway to be built through South Pasadena. We stopped that transportation fiasco and now we must stop the outrageous and exaggerated RHNA mandate and the related state housing legislation that will shred the character of our city. We need to control our own destiny. That is true democracy.

South Pasadena needs more affordable housing—without question. Housing should not be about pleasing the State or the for-profit developers who focus on luxury units. South Pasadena housing should be planned and accommodated in a sustainable manner for our residents and for those yet to come at truly affordable prices. This planning needs to be within the context of a small city that is merely 3.5 square miles and that will be able to operate with sustainable infrastructure, environmentally supportive practices, and financially sound protocols for our residents (homeowners and tenants, rich and poor, and the entire spectrum of diverse ethnicities, religions, etc.). That planning effort is very difficult to do today with the State's stranglehold on local jurisdictions, yet we must strive to try together.

We cannot follow blindly in step with the State. As of this moment, only nine out of 197 jurisdictions have approved housing elements for the State's planning cycle (In South Pasadena Review. 2022. By Haley Sawyer, "Progress on Housing Element Plods Ahead," April 29th, page 13). We are not alone in this quagmire of overzealous and misplaced mandates, along with highly restrictive instructions/-requirements on what constitutes a compliant housing element.

A coalition (Mission – Livable California) is currently collecting signatures and asking for support to have a State Constitutional amendment approved by the voters in 2024 to return land use and zoning directives back to the cities and counties. Council Member Evelyn Zneimer is the only elected representative from South Pasadena that openly supports this measure. Why doesn't the whole Council

support this as well? Or, if not, why doesn't the Council push back more with the State and build its own coalition to fight the onerous RHNA mandate? Just because of one appeal that was destined to fail anyway does not mean that South Pasadena should surrender its rights to develop a more reasonable and accommodating expansion. South Pasadena, the fighter, stops after just one loss in a huge battle for control of its destiny? That's not the South Pasadena way that I recognize.

Here is the list of the jurisdictions and their representatives across the State that do support this proposed voter measure: Endorse - Our Neighborhood Voices. This coalition's principles dovetail perfectly with South Pasadena:

• Support housing as a basic right.

• Fight for truly affordable housing.

• Assure self-determination of local government.

• Preserve quality of life in our communities.

• Achieve smart and balanced growth.

• Respect lifestyle choices.

• Protect home ownership.

• Value the American dream.

It is time to collaborate with other jurisdictions and join coalitions to bring sense and true planning back to local control with respect to land use and zoning, and especially in all matters regarding housing in South Pasadena.

Thank you for your consideration.

Sincerely,

Delaine Shane

Delaine W. Shane

2003 Meridian Avenue

GENERAL COMMENTS

This generic document does little to validate the excessive development scenario proposed for our small 3.5-square-mile community. Clearly the draft Housing Element is not dealing with today's reality. It is light on specific details concerning critical and defining zoning and planning standards and criteria. It simply notes that this critical information will be determined after the adoption of the Housing Element. Conducting public outreach and participation by the city staff and consultants should not be done this way. This strategy is top-down planning and prevents honest discourse between different views during the genesis of the Housing Element.

The Housing Element should be presented with all other related plans/zoning/design requirements together, so that the full portfolio of planning tools, strategies, and options can be understood and considered in the context of South Pasadena and its position on accommodating future growth.

Notice my statement in the previous paragraph as "in the context of South Pasadena and its position on accommodating future growth." It's about what WE want and not the State. That is a huge difference and an important distinction being made. For example, other than building new housing units, I do not have a real sense from the Housing Element what the City policy and priority is in retrofitting old office buildings for apartments or the real seriousness for educating property owners on developing Junior ADUs. Adaptive reuse of existing buildings and junior ADUs are mentioned in the Housing Element but just that and not much more. Modifying existing buildings can generate less carbon and greenhouse gas emissions over new construction and can also preserve the historic nature/character of the neighborhood where the buildings stand.

Briefly, I will state very obvious facts that cannot be ignored by the City or by the State, and especially not in the Housing Element.

Water Supply and Drought

No matter how we conserve, adding 2,067 housing units will have a significant impact on our current ability to supply water to all South Pasadena residents. Water shortages and rationing are now a reality. We will have less water and more costs by the various water districts that will ultimately be passed onto us residents.

Drought – Upper District

Climate Change

With water shortages/droughts, climate change will impact reservoirs as well. As the levels in our state and federal reservoirs continue to drop to historic lows, there will also be losses in energy levels related to generating hydroelectric power. Apparently, if you subscribe to Clean Power Alliance-SCE, for 100% Green Power, the power source does not rely on hydroelectric processes. However, if you don't subscribe to this service, you may find yourself having more black and brown outages in the future. Refer to: Power Sources - Clean Power Alliance.

Lawns, trees, and other vegetation will have to be watered under key restrictions and quite possibly lawns may be prohibited in the future if we fall within a persistent, severe drought. This will have to be balanced with the need for open space, parks, habitat preservation, as well as considering shading alternatives if more trees die out. It is worth a discussion and evaluation in weighing the growth patterns of the City amid increased impacts to these biological resources.

Social/Economic Justice

How will building so many luxury condos (while adhering to the state's mandate of density bonuses/inclusionary incentives) benefit or balance the social/economic injustices we have in South Pasadena? There are discussions on "housing mobility opportunities" in the Housing Element for those residents who are struggling from paycheck to paycheck. Except for getting out of substandard rental units, I am not clear as to what difference it makes where individuals with extremely low/very low live, so long as it is in South Pasadena. Repairing the units and allowing people to remain in them at affordable rents (with voucher assistance) and not uprooting them seems the better approach and less draconian. Conversely, is it possible that the Housing Element as it now appears could impact persons of color who qualify for such "housing mobility opportunities" but fail to remain due to gentrification. No one should be paying up to 50% of their income for rent, yet some of our residents do.

Historic Preservation

I have absolutely no idea as to how historic preservation will survive in this housing planning cycle. Overlays, zoning, development criteria, and design are for another day depriving us of thoughtful discussions about historic preservation, new construction, and possible alternatives. This is simply not transparent and is wrong to have this information withheld or not completed until after the Housing Element is approved or close to being approved. Though this is not the CEQA process, it really shuts down any initial opportunity to set draft policies within our community through collaboration and cooperation. We have a precious historic treasure trove of buildings, and we have a responsibility to be good stewards in maintaining this historic fabric and character of South Pasadena. That doesn't mean everything will be frozen in time. No, we must develop the downtown further, but in a manner that complies with federal standards and our vision of what direction South Pasadena will take: Rehabilitation Standards and Guidelines—Technical Preservation Services, National Park Service (nps.gov).

Fiduciary Responsibility/Caltrans Properties

The City and its third-party vendor must stay out of the property management business with the remaining Caltrans properties. Seriously.

Where is the funding source for the City to make such purchases?

Where are the checks and balances to ensure things will be operated and maintained properly?

My neighbors and I are completely against SB381. We live adjacent to or within a few doors down of many Caltrans properties. The views of the Caltrans tenants have also not been heard and are not reflected in the Housing Element. No decision, such as making the properties permanent rental, should be made without the full public participation and discussion with our neighbors, including Caltrans tenants. We support the recommendations made by the South Pasadena Preservation Foundation and want to see existing or previous tenants have success in buying their homes.

Conclusion

South Pasadena doesn't need a boiler-plated, word padded State template to guide our City for the next eight years in housing development. Instead, South Pasadena needs to be a leader and examine its own resources, listen to its residents (especially renters who don't have a renter on the City Council and yet comprise some 50 to 55% of the population) on what is sustainable growth. South Pasadena also needs to collaborate with other jurisdictions and coalitions to fight the State on these RHNA numbers. If you haven't seen the Los Angeles Times today, one of its leading stories states: "California's population fell, again. But an inland boom could be turning things around." "Population growth remains strong in the Central Valley and the Inland Empire." This article requires a paid subscription, so I am including just a snippet. I am not suggesting that South Pasadena have no affordable housing units. It must. Just what can be determined as truly sustainable and not what SCAG or HCD wants.

SPECIFIC COMMENTS

Comments on Table VI-2 (Summary of Housing Programs for the 2021-2029 Housing Element)

1. Page 5, Program 1.a.—Energy Efficiency. "The City will also continue to encourage retrofitting existing housing units with innovative energy conservation techniques, such as active and passive solar systems, insulation, orientation, and project layout in an endeavor to further reduce dependence on outside energy sources." Why should solar systems continue to be encouraged by our City? While I am in favor of promoting renewable energy systems, more discussion on this one is needed. As noted on page 173 of the Housing Element: "In 2021, 95% of residents subscribed to the 100% Green Power option." That is in reference to the City's success in getting most of its residents to accept the Clean Power Alliance-100% Green Power. So, how does having an individual solar system on one's home improve that goal on energy efficiency from the City's standpoint? It is my understanding that the California Public Utilities Commission may be considering added charges on metering that may make it less cost effective for owners of these systems to get reimbursed when they sell their excess energy. Furthermore, manufacturing of solar panels is not carbon neutral, and there are environmental issues with disposal of older panels. From a financial standpoint, it may not make sense for some property owners to invest in this type of system, especially if they don't intend to stay in South Pasadena for a long time. Financing this type of system with some private installers may result in liens being placed on the properties that can be problematic during subsequent sales. Wouldn't it be more productive for City staff's time and efforts to focus on the other conservation techniques than on the solar systems? Perhaps, it is time to review the hastily approved 2020 Climate Action Plan and revise it so that it can also be properly interwoven into what is now being discussed in this element and the General Plan Update?

Page 5, Program 1.b.—Housing Acquisition. "The City will have priority to purchase the surplus properties after the existing tenants." My neighbors and I continue to object to this proposed action by the City via Senate Bill 381. This legislative piece was never thoroughly vetted by the residents, especially the Caltrans residents. The City has no ability or resources to take on the responsibility of purchasing many if not all the Caltrans properties within South Pasadena. We still wait for the two vacant former Caltrans properties to be converted into pocket parks. The whole process has been plagued with delays, neglect, and empty promises. The real intent we believe is to use these Caltrans properties with existing housing for permanent rentals with oversight from a third-party management firm. That is NOT what our neighborhood wants. We want existing tenants to OWN these properties. The City's policy should be to help the residents navigate and provide/seek funding if there are short falls in financing and not let the residents fail to secure their homes. That is why our community supports the South Pasadena Preservation Foundation's recommendations. These recommendations should be part of this section of the housing element. Managing rental properties by the City or more likely its contractor is not doable. The daily administrative duties and operations, the collections of rent and processing of vouchers, the complaints under an array of situations, the continual maintenance issues, the liability of injuries, etc. will be beyond the capabilities of the City to accomplish this monumental task without additional staffing and costs. A third party will minimize all these issues, like Caltrans did, to get the most out of the renters' money (and taxpayers too) and our neighbors who live next door to these houses and apartment buildings will be directly impacted through the neglect as what is the current situation. The City should act as a facilitator and "hand holder" for the tenants to get them approved by mortgage lenders and to be a point of contact for further advice, if needed. Program 1.b is simply a tremendous undertaking that the City lacks in being able to carry out and could be a financial disaster for us as a community. At the very least, the City should identify in this element, the projected costs of purchasing, maintaining, and operating these properties by the City (or a third-party designee) versus assisting the tenants to buy their homes and then helping them seek grants and loans to fix the housing units. The tragedy is that these were once quaint, working-class homes for hard working people. Caltrans took on the mantel of slum lord and we see the results of their cruel management.

Page 6, Program 1.c.—Housing Rehabilitation and Code Enforcement. "The City will respond to tenant complaints regarding housing conditions and will proactively pursue abatement of substandard housing conditions identified in the 2022 survey (Table VI-26) or as subsequently identified to reduce displacement risk of tenants living in currently substandard housing." I completely agree with this statement. No one should live in substandard housing; however, I see no text in this housing element that protects the tenant when they make a complaint. This section needs to state how the tenant will not be evicted while the landlord makes good on complying with code enforcement's correction/abatement orders. Will the landlord pay for the tenant to be in a motel until they can move back in upon approval of code enforcement if substantial corrections are required? How will potential retaliation be prevented? Can the landlord use this as an excuse to "remodel" the unit and then increase the rent prior to the tenant moving back in? I believe that renters comprise well over 50-55% of South Pasadena residents. There needs to be more specificity in this section to ensure that existing tenants who have the ongoing misfortune to occupy substandard housing units will not be evicted or retaliated against when they register a complaint with code enforcement.

Pages 6 and 7, Program 1.d.—Assisted Housing Unit Preservation. "The City will maintain and monitor a list of all low-income housing units in South Pasadena that are subsidized by government funding or developed through local or state regulations or incentives." …. "If conversion of units is likely, work with local service providers as appropriate to seek funding to subsidize the at-risk units in a way that mirrors the HUD Housing Choice Voucher (Section 8) program. Funding sources may include state or local funding sources." This program is therefore to show compliance with the RHNA numbers for those residents that are earning extremely low/very low income (1,155 housing units). This program

will undoubtedly require the work of two or more FTEs (full time equivalent individuals, either employees or contractors). This program should not be funded by the General Fund, but by the State given such high numbers. If this must go through the General Fund, then the Housing Element should indicate the approximate cost to the taxpayers to implement this State mandate. How will this program be structured so that it can be meaningful to those who truly need such services rather than it de-evolve to just list some numbers (with or without verification) and then hand out fact sheets rather than be proactive and collaborative? After all, there are a lot of programs proposed by the City and not all can be carried out and monitored with a small staff. We cannot pay an endless amount to outside contractors. On Page 7, the last paragraph in the program explains what happens if owners sell their properties before the 55-year (for owner occupied units) and 45-year (for rental units) requirements that ensure such properties remain affordable for their set periods of time. Two questions come to mind. First, if a developer is relying on Program 3.d (Enable Parcel Assemblage) to build multi-housing units and one or more of the small properties are under Program 1.d (Assisted Housing Unit Preservation), does the owner/seller of the existing property still have to pay any money beyond the affordable sell price to the City? Several sad situations exist for why owners of affordable housing may have to sell, such as the death of the primary wage earner, the aging out of the owner, divorce, etc. but under the scenario I have presented here, it appears that only the City and developer would reap the monetary rewards and not the property owner. Second, does the placement of a "roll-over" restriction for another 45-55 years to protect at-risk units where the property owner sells the units prior to the first-time frame legally sound? I am all for ensuring affordable housing, but is there a legal precedent for this "roll over" restriction that essentially restarts the entire period again or just maintain the remaining affordable years left by the previous owner. It just sounds particularly onerous and not a true legal nexus. Could this "roll over" restriction place the City in legal jeopardy?

Page 7, Program 1.e.—Environmental Health. This program needs to be expanded to include air and soil contamination testing and mitigation on properties (especially those with existing structures) to undergo rigorous evaluation before constructing new housing units. I still go on record that the evaluation of buried soil contamination at the Seven Patios Project site was unsatisfactory and should have had more rigorous testing.

Page 8, Program 2.a.—Provide Technical Assistance for Projects with Affordable Housing. The second paragraph should become the first paragraph in this discussion and the number one priority of this program with these edits: "The City will reach out proactively to developers of 100% affordable housing to identify and vigorously pursue opportunities to the maximum extent feasible on an annual basis. The City periodically updates applications and materials, and provides application forms and materials on-line at the Virtual Planning Desk to better assist housing project applicants and for implementation consistency." Still on Page 8 of this program contained within the column entitled eight-year objective with this edit: "Expand housing mobility opportunities through affordable housing in locations distributed throughout the City and encourage affordable development in high resource areas by facilitating timely review of development proposals…." This edit reflects more accurately and explicitly Goal 2.0. Last comment for this program within the same column: "The City's objective is to assist with 100 applications across all income levels during the 2021-2029 planning period. Update materials by June 2023." Clarification of this statement is needed. Does the City's objective for the 100 applications mean just in receipt of or does it seriously mean processing them and seeing these through completion as built units? What if no applications are received at the extremely low/very low income levels? What then? And if high numbers of applications are submitted within a short timeframe, which income level(s) applications will be given the highest priority?

Page 10, Program 2.e.—Facilitate Density Bonus for Projects with On-site Affordable Housing. "The objective is to approve at least 600 affordable units during the planning period through density bonuses

to facilitate mixed-income projects, and support expanded housing mobility opportunities for lower-income households." Of course, streamlining approvals means excluding CEQA discretionary action and making it ministerial. This separation rather than complete discussion of the Housing Element, the General Plan Update, Specific Plan Update, Zoning Modifications, Design Requirements, and Climate Action Plan combined is extremely problematic. It is precisely at this ambiguity juncture where we are concerned that with the loss of CEQA input, our voice in how the development is proposed, designed, and pushed through will be lost.

Page 10, Program 2.h.—Incentivize Special-Needs Housing. This program needs to ensure that such housing be distributed throughout the City. Once such buildings are erected, what will be the mechanism to ensure that the operators of said housing will be good stewards and good neighbors?

Page 12, Program 2.j.—General Plan Affordable Housing Overlay and Program 2.k—Affordable Housing Overlay Zone. These overlays should be made available now for public review. One will be adopted by the General Plan approval date and the other no later than October 15, 2024. That does not allow for much public discussion or flexibility in revising such overlays, as needed.

Page 12, Program 2.l.—Facilitate Affordable Housing on City-owned Property. "This process will begin with a review of assets to create a City-owned site affordable housing inventory (will include list of surplus properties) by June 30, 2023." Shouldn't the public know what the City's assets are that could be considered for public housing first before this Housing Element is adopted? We have very little open space/parks in several parts of our City. Some of these assets also need to be utilized for that purpose. As a side note, it is difficult to hear that the City doesn't even know to the full extent what properties it owns outright, rents, or has easement rights over. And yet, the City expects to deal with all the bureaucracy, financial peril, and personal involvement that will entail encouraging development and managing Caltrans properties. Simply unbelievable.

Page 13, Program 3.a.—Rezone and Redesignate Sites to Meet RHNA. This program is nothing more than promoting refill parcels or redevelopment parcels-still a controversial approach for generating more affordable housing. If a property owner wishes to voluntarily participate, then it is not an issue. This program should not be a planning tool in which the City decides which properties are not at their highest and best use. Nor should eminent domain be employed for this program.

Still on Page 13 under this same program: "The types of standards and processes that will or may need revising include height limits, open space standards, parking requirements and findings for design review. The rezoning of the vacant parcels must be completed within one year of the beginning of the 6th Cycle Housing Element planning period, which is October 15, 2022. Sites that are planned to receive the Affordable Housing Overlays (see Programs 2.j and 2.k) in the General Plan and Zoning Code are also addressed by this program." These statements should be discussed publicly now and not near the end of the General Plan Update/rezoning identified as being October 15, 2022. These other documents that the consultants have been writing about will be hundreds if not thousands of pages long collectively. Again, it is the State driving this deadline and that is why the City needs to push back. Height limits, open space, and parking are very critical issues to our neighbors and our community. And we are asked to sign off on this Housing Element without understanding what the City will define as its new standards. Ultimately, we will lose our recourse to remedy mistakes because CEQA will no longer come into play. This is wrong and not democratic.

Page 14, Program 3.b.—Mixed-Use Developments and Adaptive Re-Use. We don't have information on the zoning changes at this point. We need to see how the zoning within the City will change to support the Housing Element.

Page 14, Program 3.c.—Replacement of Lost Units from Residential Demolitions. "Identify affected demolition proposals based on maintaining an inventory of affordable units and require replacement housing in compliance with State law to reduce displacement that occurs as a result of demolition and enable residents to remain in their community." This needs clarity to ensure protection for the residents. Does this mean that before existing affordable housing is demolished, the current tenants will be guaranteed replacement housing before demolition commences? If so, who is responsible for their temporary housing costs (which might last for a year or so)? If not, how can you make a statement that residents will be able to remain in the community if they are amongst the first "casualties" of demolition? Vacancy rates in South Pasadena are low even for rental units that moderate income individuals can afford. What about the extremely low/very low income population?

Pages 14-15, Program 3.d.—Enable Parcel Assemblage. What if an adjacent property owner does not wish to sell their home to the developer? Will the City then proceed to take the property through eminent domain to ensure that the RHNA numbers are being met? With all the incentives the City is proposing to give to the developer, such as more height, additional stories, waive lot merger fees, and perhaps a lessening of parking requirements in areas that are already built out, absolutely no consideration is given to the residents. There is no acknowledgment from what I can tell from the Housing Element on how much our neighborhoods already suffer and that with new development will be compounded such as deteriorated streets and limited to no parking. The developers cannot fix our current problems. Does the City expect that the character of our small City will remain unchanged with this over-the-top densification? How will the City prioritize the historic homes on the inventory list throughout the City? Many homes have been modified over the years. So, will the City follow the tactic of Caltrans and deem that these historic homes can therefore be demolished? And again, what can other neighbors say about it, when it has become a ministerial action with no CEQA involvement because it fits with an ambiguous housing element with no zoning modifications presented to us at this time to discuss and consider?

Pages 15-19 for Programs related to Accessory Dwelling Units (ADUs). I could not find anything about short-term rentals (e.g., AirBnB). Such housing stock is detrimental to achieving affordable housing goals and objectives. One or more of these programs need to explicitly state the policy of either no such rentals permitted or a set limit with specific restrictions in a policy/ordinance. I am certain there are already residents that have this type of operation in service, so it is important to have a dialogue to see what is most reasonable and fair.

Page 19, Program 3.m.—Implement SB 9 and SB 10. Isn't SB 10 optional for the jurisdictions? The text indicates that SB 10 zoning amendments would be considered by December 2024. Why the delay? All these pieces need to be examined now. Is the City piecemealing this planning effort? The Housing Element needs to focus more on potential adaptive re-uses of existing commercial buildings and junior ADUs. They are mentioned but their actual potential is not really examined or prioritized.

Page 20, Program 4.a.—Land Use Controls-Emergency Shelters. What does the BP zone mean? I was unable to find the definition in the Housing Element. Location of such shelters are important and the zoning of them should be discussed now and not one year after the Housing Element is approved.

Page 20, Program 4.b.—Land Use Controls—Transitional and Supportive Housing/Low-Barrier Navigation Centers. This is a euphemism for half-way homes. The City is planning to revise the Municipal Code so that these homes can be placed without discretionary CEQA review in areas zoned for mixed use and non-residential zones permitting multifamily uses within two years after the adoption of the Housing Element. I know this is also a controversial topic, but it needs to be discussed now. All the "pieces" of the planning jigsaw must be available for people to understand, discuss, and voice their opinions.

Page 21, Program 4.c.—Land Use Controls-Flexible Zoning Regulations. Does this flexible zoning program also include those centers (i.e., half-way homes) in Program 4.b?

Page 21, Program 4.f.—Senate Bill 35 Procedure or Policy. This draft policy on streamlining "eligible" projects per the cited California Government Code needs to be available for us now to review and not by the end of the year when the Housing Element is already adopted.

Davis White (May 31, 2022)

To whom it may concern,

The California Department of Housing & Community Development (HCD) recently published a letter in response to Temple City's implementation of Senate Bill 9 (SB 9) which has sweeping implications for other jurisdictions in this process. The letter focuses on the city's ill-founded attempt to reduce the intensity of land use for SB 9 projects without any attempt to concurrently increase intensity elsewhere, as required by the Housing Crisis Act of 2019 (HCA). Any change in intensity of units or size without counterbalancing affects feasibility. HCD has found this violates state law. Temple City's SB 9 ordinance—and HCD's response—also contains a laundry list of don'ts which may affect a jurisdiction's Housing Element compliance. Specifically, the letter called out Temple City's use of square footage restrictions, height and story restrictions, courtyard requirements, parking limitations, LEED standards, underground requirements, and even affordability deed restrictions. All told, such requirements for SB 9-related projects which go beyond standards for other projects may be construed as governmental constraints.

Jurisdictions will have to identify and justify such constraints in their Housing Elements. Lastly, the letter stresses that a jurisdiction's implementation of SB 9 is covered by state laws other than the HCA and State Housing Element Law. This includes, but is not exclusive to,

State ADU Law, AFFH, and Anti-Discrimination in Land Use Law. How a city implements SB 9 has wide-reaching considerations. Jurisdictions should be fully aware that SB 9-related projects are not separate nor exempt from their ordinary zoning laws

and instead should be included within existing codes. The point of SB 9 is to give homeowners the means to increase the density of their properties. It is not a dead-end in state law.

Attached to this email is HCD's letter to Temple City for reference.

Sincerely,

Davis White

Josh Albrektson (June 20, 2022) (Twitter Post)

South Pasadena is required to show they have enough zoning to allow 2,067 homes will be built over the next 7 years. They just released a Housing Element that shows where they claim the "Future homes" will be built. Me and @taxingainteasy are gonna take you so see them.

To start with, South Pasadena claims that this entire mountainside will be redeveloped with homes. They have no plans to actually do it and never actually would, but they still make the claim.

(Blue dot is where I am standing for video)

In fact, in the Housing Element they even specifically state that it will always be open space at the same time they claim housing will be built on it. They had these same sites in October and were told to remove them by HCD, but they are still there.

You really don't get a sense of how steep this mountain is until you actually go up there. This will be the first and last time I go up there. [He describes location of and road in relation to estimated "45 degree" slope and presents questions regarding feasibility of housing development on the hillside. Implies 65 homes are going in this area (25+40)]

This is another place where they claim that homes will be built on a mountainside with a 60 degree incline road. Blue marks where I am standing for the video. [He describes location of housing sites in relation to estimated "70 degree" slope and presents questions regarding feasibility of housing development on the hillside. Implies 11 homes are going in this area (7+4)]

Here is the video for reference.

SoPas claims that every major grocery store will be turned into low income housing. This Ralphs which serves most of San Marino and Alhambra and is the only grocery store around will be 133 homes, even though the owner never responded to any e-mails from SoPas. (Sound on) Video says: "Does this Ralphs look like it's about to go out of business? Looks pretty busy to me"

This SilverLake Ramen is actually about to open and at the last City Council meeting the mayor talked about how responsive the staff was to get the permits approved when it hit a snag. But According to South Pasadena this will be torn down in 7 years and turned into 263 homes.

Not only that, but this entire complex is planning to do massive renovations this year. In order to be included as a low income site you have to show that the current use is likely to be discontinued in the next 7 years. You don't spend millions on buildings to tear them down.

Speaking of grocery stores undergoing renovations, SoPas was told to remove this Pavilions from the list. SoPas is claiming they talked to the owner and he now wants to tear it down and build housing. SoPas will not give me any evidence of that conversation.

Here is HCD telling SoPas in December that these sites should be removed, but they are still there.

This was also featured in an amazing article by @RegJeffCollins with follow up articles by @publiceditor

On a related note, SoPas makes all kinds of claims in their Housing Element for communications with owners, but they don't publish them and have repeatedly refused to show them when asked. I have even put in PRAS and 210 days later I have yet to get a response from SoPas

See these power lines??? They are the main power lines that got from a power plant and supply most of the power to SoPas, San Marino, and Alhambra. South Pasadena claims that 15 homes will be built under these high voltage power lines.

But not only that, they also claim that they will move their Public Works yard here and build 34 units at that site. I am sure Edison is totally cool with storing heavy duty trucks under high voltage power lines. We will just shut down power for a year when it is built.

This is the parking lot for Rite Aid and other stores in a shopping complex. South Pasadena claims that the parking lot is not used for businesses. They would be shocked to learn there is a tunnel going strait from the parking lot to the businesses.

Rite Aid would also probably disagree with the assessment that the parking lot is not used for their business.

See this McDonalds??? It is one of the nicest McDonalds I have ever been to. No response from the owner, but South Pasadena claims that they will be turned into 47 new homes.

You might recognize a lot of these sites because they are almost unchanged from the sites that South Pasadena submitted over a year ago. They were told at the time most were not eligible, but they are still there.

Now, let's go to some of the little sites that SoPas claims will be housing. It is obvious that they just pulled these from a random computer program and never even looked to see if they were valid. This is my thread from the first draft they had.

They have lots that claim a driveway will be built on a 6 foot strip of land up into the hills.

Does this look like a future driveway up into the hills???

Random street next to high school is apparently going to be a home.

Street demonstration by @taxingainteasy

This home (red) and this persons backyard (blue) will be torn down and turned into homes.

I bet this home doesn't know it is going to be torn down.

15 foot wide strips of land are apparently potential future homes.

Some dudes tennis court(red) and the main walkway connecting Monterey Hills and the High School (blue, called the snake trail) are both supposed to be housing.

This lot has approved plans for a pocket park that is supposed to be built this year. SoPas also claims it will be a home.

This thin strip of land is supposed to be a home.

Sometimes you have random strips on land in the middle of the mountain.

Not Kobe!!!!! This building is half a block from the train station. SoPas claims it will be torn down and replaced with apartments at 70 DU/Acre. The only problem is there is a 25 foot height limit and one parking spot per bedroom minimum parking requirement.

Finally, Krispy Kreme. This is not being torn down, we are just happy it is here.

This list is just some of the worst examples from the Housing Element. I don't include how South Pasadena enacted the highest inclusionary housing ordinance in the state to make sure no buildings will be financially feasible, in part because you cannot take a picture of that.

BTW, if you are looking for who to blame for the Housing Crisis,

@GVelasquez72 is in charge of @California_HCD. Under his leadership countless examples like the ones above have been approved. Like Vista being allowed to claim their 10 year old city hall.

You also have @Jason_Elliott and @CaHousingGuy who have yet to refer a single city for prosecution for a lack of compliant Housing Element, even ones that are openly defiant. Jason claimed that Newsom was going to hold cities accountable.

ADDITIONAL NOTES

Outreach to low income housing providers: Need to add reference to City outreach to Hollywood Community Housing Corporation to explore possibilities of partnerships and to understand the needs of LI housing providers.

Site 9 - (Yards): The site identified has been further examined and seems not to be feasible. Change on the notes to say that the current CIP includes a comprehensive assessment of City-owned facilities that may be suitable for relocation of the Yard, in order to vacate the property for an affordable housing project.

Josh Albrektson (June 21, 2022))

There are a lot of amazing claims made for the low income sites in this new Housing Element. In March before it was published I asked Angelica if she could share anything that will be used to claim a site is suitable and Angelica refused to send anything over (See below) The day after the new Draft Housing Element was published I asked Angelica for specific things related to the claims made in the Housing Element. She refused to send them over. I filed specific PRAS on May 11th for communications with the single family homeowners that they claim will develop in sites 14 and 15, any contact with Edison over the moving of the Public Works yard beneath the power lines for Site 9, the new communications with Vons and Pavilions about owner interest in developing housing (sites 20 and 21), and communication with this YMCA board member for site 23. These were not broad PRAs and should have returned 1-3 documents each, documents that Angelica should have easy access to. South Pasadena has not filled a single one of these PRAs despite multiple requests. South Pasadena is making claims in their housing element about low income sites and deliberately making sure the public cannot examine the validity of these claims.

Angelica Frausto-Lupo (March 14, 2022)

Subject: Can I get some information

CAUTION: This email originated from outside of the City of South Pasadena. Do not click links or open attachments unless you recognize the sender and know the content is safe. With the Housing

Element release coming up I was wondering if I can get some information. I'm asking for it by e-mail because it would be much easier for you guys than more extensive PRAs. All of this information should be easy to obtain. 1. How many ADU building permits were issued in 2020 and 2021?? 2. Can you give me a list of projects that have turned in applications that the IHO would apply to since it was implemented?? I don't need anything extensive, just the address and number of proposed units in each project. 3. The evidence for each low income site in the Housing Element that you are using to claim as substantial evidence that the current use will be discontinued?? Margaret knows what I am talking about for this stuff. Thanks.

Josh Albrektson (June 30, 2022))

South Pasadena just e-mailed a comment letter to residents 8 days before the HCD letter is due. It is an incomplete document and even being somebody who knows housing law it is hard to fully comprehend. This is not real community outreach. Because I am off this week I should be able to provide a comment on some of the things in that letter that is misleading/false by the end of the week. I will include one thing here. " Proposed revisions in the section under Historic Land Development Patterns (approximately page 94) ahead of the sentences about the height limit initiative: The City does not have any growth control or management policies in place, and has not historically," This is just flat out wrong. They enacted the 45 foot height limit in 1983 and also enacted a slow growth policy placing a cap on 60 new housing units a year. They did this in part because Asian people were moving to South Pasadena. They also banned minorities from owning homes until 1965. Here are articles from the LA Times in the 1980's describing South Pasadenas growth restrictions. I have pulled out the relevant paragraphs and italicized them. https://www.latimes.com/archives/la-xpm-1987-10-25-ga-16043-story.html Minorities, Growth Like other cities in the western San Gabriel Valley, South Pasadena, which covers less than 3 1/2 square miles, has experienced both a significant influx of minority residents and a drive to build. Almost a quarter of the city's 24,400 residents are Asians, according to city officials. Fearing that South Pasadena is losing its character as a typical American small town of single-family homes, residents have battled plans for condominiums and major commercial projects. In 1983, voters rejected a proposed twin-tower office building that had been unanimously supported by the City Council. Then, after Simmons and Getchell petitioned for a ballot measure, voters imposed a 45-foot height limit on new construction. Now Simmons is leading a similar initiative drive to restrict minimall construction in the city. Cap on New Housing Last year, the council, under pressure from citizens' petitions, voted to place a cap of 60 new housing units a year in the city. https://www.latimes.com/archives/la-xpm-1988-11-28-me-363-story.html But city leaders say South Pasadena and its old-fashioned way of life are protected by a community-nurtured resistance to change. South Pasadena was one of the first cities in the region to adopt a slow-growth policy. In 1986, faced with a proliferation of condominium complexes and apartment buildings in the southern part of the city, as well as a voters' revolt, the City Council imposed a 60-unit annual limit on new multifamily developments. "We've protected ourselves pretty well," Woollacott said. Static Population The city's reluctance to build is reflected in population statistics. The population in neighboring cities has ballooned, mostly with new arrivals from Asia, but South Pasadena's has increased by an average of only 84 people a year since 1970. While the city was keeping a lid on new apartment buildings, slowgrowth activists turned down a string of proposed commercial developments, using intense political pressure or the initiative process. For example, in 1983, when a local merchant proposed to erect two multistory office buildings, angry residents petitioned for a ballot measure limiting the height of new construction. The measure won, and the so-called "twin towers" died a sudden and unlamented death. In recent months, two major projects have also succumbed to slow-growth sentiment. First, developer Thomas Stagen withdrew a plan for a 150-suite hotel on Fair Oaks Avenue, citing the community's "virulent opposition" to the project. Then, the City Council, acting as the Community Redevelopment Agency, scuttled a move to declare 74 acres of prime commercial area in the city a redevelopment area, after rebellious local merchants displayed signs

portraying the council as a big octopus, seeking to control the city. In 1989 led by a local NIMBY Group SPRIG South Pasadena began implementation for a new general plan that downzoned the city from having a capacity of 60,000 to 25,000. LA Times article at the start: https://www.latimes.com/archives/la-xpm-1989-08-27-ga-1552-story.html General Plan update that includes a excerpt from the Task Force from 1990:(page

13) https://www.southpasadenaca.gov/home/showpublisheddocument/220/636721709083330000 As the new decade begins, however, South Pasadena is faced with the twin threats of burgeoning multi-residential growth and continued deterioration of its commercial areas and business tax base. South Pasadena did not allow minorities to own houses. In 1964, a latino USC professor was allowed to buy a home because they mistakenly thought he was Native American. There is a TON more racist things in this article that South Pasadena did such as banning black children from the community pool and blocking off a street that connected them to the Latino El Sereno, but those were not housing related. https://www.coloradoboulevard.net/when-south-pasadena-was-a-sundown-town/ Housing In 1964, Manuel Servin, a Mexican-American professor at USC, managed to buy a house in South Pasadena, even though Mexican Americans were specifically restricted from doing so. Native Americans had no restrictions placed on them and City officials mistakenly approved his purchase in South Pasadena. Shortly thereafter, in the mid-sixties the Federal government provided funding for affordable housing with the Altos de Monterey development which brought more racial diversity to the area. Many communities adjacent to South Pasadena did not share the same racist past. El Sereno, Highland Park and Alhambra were far more multi-racial. This created the basis of still more examples of racially divisive attitudes in residents and more law suits against the City of South Pasadena.

Josh Albrektson MD
Neuroradiologist by night
Crime fighter by day

Josh Albrektson (June 30, 2022)

I'm gonna send my comments as I write them because SoPas dropped this letter 8 days before the deadline for HCD to make their findings.

Comments on Responses to HCD Preliminary comments.

1A. City needs to remove all sites from Table VI-44 that have backyard tennis courts, current homes, plans to be a pocket park, sites that do not exist on the APN map, and ones that are trails that are used to get to the high school.

1B. The Los Altos housing development covering SouthWest South Pasadena was done in 1965. Since that time there has not been a single new road built in the mountains of South Pasadena. There have been lots developed, but all of these lots are on existing roads. All lots that do not have road access should be removed, regardless of the slopes.

Page one contains a list of all sites by APN which should be removed.

https://docs.google.com/spreadsheets/d/1CZFzZM41DcAmVWgOUaFgaAU77Lrww9cSRwQ7GVJfWg/ edit?usp=sharing

You all have seen the videos but you can see how unrealistic it is to claim a road will be built down this hill.

https://twitter.com/JalbyMD/status/1538986717599830016?s=20&t=vn8iBXZzAb-xOVD-Rg-HHQ

1C. More than 50% of RiteAids business comes from people who park in the parking lot. You cannot just claim "This will be resolved." And the parking lot was not for sale, the whole site including the Rite Aid building was sold about 8 years ago. It was not just the parking lot.

See how many people are using the tunnel to get to the parking lot:

https://twitter.com/JalbyMD/status/1538992058236407808?s=20&t=vn8iBXZzAb-xOVD-Rg-HHQ

2A. IHO makes every building economically infeasible so they will not be built and SoPas cannot claim it will help spread affordable housing through the city.

2B. The City talks about the single family homes in the South West of the City and how ADUs would help increase housing on those sites. South Pasadena enacted a ADU ordinance that made that area a high fire zone and instituted many restrictions so that ADUs cannot be built in that area. There is a e-mail from Reid Miller of the HCD ADU team to Liz Bar-El talking about and this included in the 5/21/21 e-mail sent out by Paul to the City. (see attached email)

3A. Sent out different e-mail quoting the LA Times articles from the 1980's about how "South Pasadena was one of the first cities in the region to adopt a slow-growth policy." And banned minorities from buying homes until 1965.

3B. "The City will continue to include projects in the City's Capital Improvement Program (CIP) that develop infrastructure which supports housing for lower-income residents, and provides transportation facilities for those without access to vehicles."

On May 23rd South Pasadena decided against implementing bike lanes in the city and instead used the money to expand a one lane road of Orange Grove to a two lane road at a cost of $500k in order to make it easier for people to get on the freeway. As part of the Housing Element South Pasadena should commit to implementing the adopted 2011 master bike plan by 2025.

Link to them rejecting the bike plan for the road widening:

https://twitter.com/ActiveSGV/status/1528818927588937728

Adopted but not implemented 2011 Bike Plan.

https://www.southpasadenaca.gov/home/showpublisheddocument/1793/636721709083330000

3C. Regarding Program 2.e and the IHO increasing the supply of affordable housing. IHO makes every building economically infeasible so they will not be built and SoPas cannot claim it will help spread affordable housing through the city.

Josh Albrektson (July 1, 2022)

5A. Site 18 cannot be developed without destroying the McDonalds drive through in site 17.

5B. Please ask to see the last contacts of the City with sites 3 and 6. What I have received from my PRAs implies both sites are not viable, with site 3 specifically telling the city that the IHO means his project can no longer work.

5C. Almost all sites are in locations where commercial projects can also be built and the probability of that happening is not taken into account at all. In the case of Vons and Pavilions, sites 20 and 21, that is actually happening with both undergoing extensive renovations in 2022. (Pavilions now and Vons planned)

5D. South Pasadena limited SB 9 so that all units can be a maximum size of 850 st ft. That guarantees a single family home is more likely to be built since they can build to 0.35 far. San Francisco did a feasibility study on SB 9 and determined that there was almost no sites in San Fran that a SB 9 project would be more feasible than a single family home, and that is without the 850 sq ft maximum SoPas does.

https://sfplanning.org/sites/default/files/documents/citywide/SB9_Summary_FinancialFeasibilityAnalysis.pdf

6A. I think the numbers "consolidation on sites 10, 15, 19, 21 and 25" on the HCD letter is wrong. There is no site 25.

6B. Sites 10, 20, and 23 have the same owner. Sites 13 and 14 do not have the same owner. Site 14 the city met with an affordable housing developer and instead of developing decided to extend the lease of the playhouse located on the site.

7A. Paul told the city in May that the power lines are not a feasible site for anything. The Public works yard (site 9) should be removed from a list of viable sites. South Pasadena also counted the power lines sites for 15 moderate income sites on Table VI-44, line 6. This should also be removed.

7B. See comments 1A and 1B above. There has been no new roads built in the Los Altos (SouthWest SoPas) since 1965 and the only lots that have been developed since that time had access to a road. All sites without road access, the planned pocket park, the guys backyard tennis court, the snake trail, and sites that don't exist should be removed.

Every site on page one of this spreadsheet:

https://docs.google.com/spreadsheets/d/1CZFzZM41DcAmVWgOUaFgaAU77Lrww9cSRwQ7GVJfWg/edit?usp=sharing

8A. They should only be allowed to claim the average ADU building permits for the last 36 months of whenever they get an approved housing Element. Other cities such as Los Angeles show there is a bump for two years due to pent up demand but then there is a drop in applications over time.

8B. SoPas does not address the fact it is one of the richest cities in the Los Angeles II category of the scag survey and that it is unlikely that any ADU will be affordable to a low income family or individual unless it is given to family. Also they do not factor in that about half of all ADU applications will not be used for new housing but is instead an expansion of the current living space.

9A. They should never be allowed to have an "eight year objective" because that means it will never happen.

10A. Program 3.a is just a program that says sometime in the future they will study what kind of zoning is required to allow the density claims made in the Housing Element to be feasible. That kind of information should be done in the Housing Element itself.

10B. The city forced 815 Mission to do a feasibility study for its density bonus. This feasibility study showed that the only way a 10% VLI housing project is feasible is if 57 feet is allowed, significant FAR increase, and almost every single open space and other requirement was waived. I would imagine a 10% VLI and 10% LI would require a much higher height and FAR limits than South Pasadenas base zoning has. You can find the feasibility study on page 104 and the concessions granted on page 120.

https://www.southpasadenaca.gov/home/showpublisheddocument/29308/637855358954070000

11B. No mention of the Pre-Application or the times to get through Building. Mission Bell started the permitting process in August 2017. It received planning commission approval in Feb 2020. It still does not have building permits, almost 5 years since the first contact with the South Pasadena planning department.

https://southpasadenan.com/mission-bell-project-approved-planning-commission-tweaks-conditionsauthorizes-venture/

12A. I told the city as they were implementing the IHO that it was the highest in the state. I have repeated this statement about 15 times over the past year so the city cannot claim they did not know it. I provided them with examples of every local city IHO. I did math problems showing how it was non-viable.

They did a recent economic study this April that I sent in a different e-mail that showed that the IHO raised the prices by 11%. They implemented it with the purpose of shutting down development, as demonstrated by trying to backdate it illegally to apply to 815 Fremont. I sent in a report to HCD and Melinda Coy told South Pasadena this was illegal under SB 330 and they eliminated the backdating.

12B. The economic report that they are doing is to show how feasible a density bonus project would be.

They are not examining if the IHO is feasible under the base zoning standards. On page 121 of the recent agenda packet the South Pasadena states "Building on the pro forma analysis completed in Task 2 and the understanding that the IHO will automatically trigger the State Density Bonus"

https://www.southpasadenaca.gov/home/showpublisheddocument/29512/637879719642900000

Automatically trigger the state density bonus means that South Pasadena knows it makes any project under the base zoning infeasible. They also applied it to buildings under 10 units which are much more likely to be infeasible with the added costs.

Since it was enacted in April of 2021, there has been only one project submitted. That was site 11 where the developer purchased the site not knowing the IHO was going to be implemented. And if the 19 Moderate and 89 above moderate numbers are true, it means South Pasadena is not applying the IHO to this project.

We are one year into the cycle and South Pasadena has intentionally killed all housing projects with this IHO.

Because of this South Pasadena should have to provide excess zoning and programs to catch up from them shutting down all projects.

12C. There were contacts with developers when the IHO was being implemented. You will find comments from the developers of sites 8 and 3 on page 29 and 41, respectively, on the agenda packet when South Pasadena was considering the ordinance. You will see them stating that their projects are no longer viable. Victor Tang even did the feasibility analysis and showed that the IHO would cost the developer $933,000. For site 3 there has not been any contact with Victor Tang according to my PRA requests since this letter.

https://www.southpasadenaca.gov/home/showpublisheddocument?id=25699

13B. See Comment 11B. There has not been a single recent project that has received building permits. Ask the city for the dates between planning commission approval and building permits for Mission Bell, the Senior center on Fremont, and Seven Patios. All of these projects have taken over 2 years to get building permits and as of recently none of them have building permits per year.

18A. What the city describes as "Public outreach" is a combination of trying to talk to people who could give them more cover to claim that non-viable sites are actually viable. There were no meetings from November 17th until after this draft of the housing element was submitted. There was no effort to reach any residents, let alone renters or low income residents.

19A. Appendix B explains why the city doesn't think the comments are valid or applicable. It does not integrate any of the comments into the Housing Element.

Matthew Gelfand (July 5, 2022)

Dear Mr. McDougall:

Californians for Homeownership is a 501(c)(3) organization devoted to using legal tools to address California's housing crisis. Our organization is monitoring local compliance with Housing Element law. We are writing to comment on the revised draft Housing Element submitted to HCD by the City of South Pasadena on May 11, 2022, as modified by the City's June 29, 2022 responses to HCD's anticipated comments.

At the outset, we note that other commenters have extensively detailed the inadequacies in the City's sites inventory, both in the context of the City's first draft housing element and the revised draft that HCD is reviewing now. Our comments are intended to highlight some of the most egregious problems with the inventory. We encourage you to review the comments made by others, including the extensive documentation provided on Twitter by Josh Albrektson. [https://twitter.com/JalbyMD/status/1538985994602459136?cxt=HHwWgMClqfbmydsqAAAA]

We also note that although the City provided some information about planned changes to its housing element in its June 29, 2022 responses to HCD's anticipated comments, the City did not provide specific information about which sites it intended to remove from its sites inventory.

Our comments here are based on the limited information provided by the City.

Non-Vacant Sites

The sites inventory in the City's draft Housing Element does not meet the requirements in Government Code Section 65583.2(g). The inventory does not adequately account for the impediment created by the existing uses on the listed nonvacant sites, including the possibility that a site will be maintained in its current use rather than redeveloped during the planning period.

What's more, the City's draft housing element appears to rely on nonvacant sites to satisfy over 50% of the City's lower income RHNA. But the inventory does not identify evidence that the existing uses on each of these sites will be discontinued during the planning period. For example:

 HCD's prior letter pointed to three specific examples of sites with existing uses to be further evaluated or removed. For two of the sites (the Pavilions site and YMCA site), the revised draft Housing Element adds only vague statements about owner interest and does not adequately address the impediment of existing use. No additional information is provided for the other singled-out site (the Vons site), which is purportedly able to accommodate the largest number of units of any site with 157 lower-income and 263 total units. The City should be required to remove these sites from its inventory.

 More generally, the inventory lists three of the five area grocery stores. Each existing grocery store is a vital existing use that is exceedingly unlikely to be discontinued within the planning period. But it is even more unlikely that more than one of these stores will be closed, as the remaining stores will be forced to shoulder the burden of additional demand once one store closes. Although in one case the City is treating the store's parking lot as the area for development, the parcel includes the store itself and state law requires the City to show that the existing use (the store) will be discontinued in order to avoid the presumption that it will impede development; this makes good sense, as there is no way to develop on the parking lot parcel without discontinuing use of the store for at least several years in the absence of parking. The City should be permitted to list no more than one existing major grocery store on its inventory.

 The inventory includes a number of other sites containing existing uses for which the City acknowledges there is no evidence of developer or owner interest in redevelopment, and the City should be required to remove all of these sites from the inventory:

APN 5318-015-017 (900 Fair Oaks Ave.), purportedly able to accommodate 18 lower-income and 29 total units: This parking lot is leased to the Rite-Aid corporation through December 2035.2 [https://www.loopnet.com/Listing/900-Fair-Oaks-Ave-South-Pasadena-CA/14380777/] The draft Housing Element states that there is no interest from developers or the property owner. The fact that the property is not subject to a covenant with the adjoining property does not help the fact that it is encumbered by a lease until 2035 and cannot be developed within the planning period. The housing element notes that the site has been listed for sale, but conspicuously fails to reveal that it was listed as a parking lot to be used for income property through 2035, not as a development property.

APN 5311-012-019 (301 Monterey Rd.), purportedly able to accommodate 19 lower-income and 31 total units: Commercial building with an existing use as a liquor store. The draft Housing Element states that there is no interest from developers or the property owner.

APNs 5318-004-012, 5318-004-019, and 5318-004-023 (716 Fair Oaks Ave.), purportedly able to accommodate 17 lower-income and 29 total units: Commercial property with an existing use as a relatively new McDonald's restaurant. The draft housing element states that there is no interest from developers or the property owner.

APN 5311-004-010 (143-161 Pasadena Ave.), purportedly able to accommodate 50 lower-income and 83 total units: Commercial property with new tenants. Although the draft housing element suggests prior interest in development, it indicates that the current status (presumably since the new tenants) is unknown.

Undevelopable Vacant Sites

The sites inventory lists as sites for housing a large number of vacant parcels on mountainous terrain, not served by paved roads and with no access to utilities. Most of these sites have zero likelihood of being developed and they are either publicly owned with no plans for sale or privately owned and considered undevelopable by the owners. In some cases, themaps included with the City's housing element include references to roads that do not actually exist, such as "Harriman Avenue." "Harriman Avenue," as depicted in housing element (left) and the entrance to "Harriman Avenue" from the ground (right). In addition to having little or no likelihood of development, the City has not met the requirements of Government Code Section 65583.2(b)(5)(B) for these parcels.

Because these parcels are generally not served by a paved road, they should be addressed by requiring the City to remove all vacant parcels not served by an existing paved public roadway.

Density Assumptions

The highest-density project identified in the City's table of representative projects is a 50 unit/acre project that used 98% of the available FAR. Nevertheless, the City has used for some parcels an unrealistic assumption of 70 units/acre—a density that stands no chance of being achieved due to the City's voter-mandated 45-foot height limit and its restrictive development standards for FAR, setbacks, open space, parking, etc.

To justify this assumption, the City has cited two projects from other cities with very different development standards. The first project, in Hercules, is above the South Pasadena's height limit, so South Pasadena appears to have taken the absurd approach of simply omitting the unit count for the project's top floor in calculating the project's density without accounting for the feasibility and economies-of-scale differences between developing a four- versus three-story project. The second project is a smaller project in the City of Santa Monica. Both projects appear to be built up to the property line (indeed, the Hercules project appears to extend over the sidewalk) and have no visible parking. Nothing resembling these projects could be built in the City of South Pasadena.

The City should not be permitted to use a density assumption above 50 units/acre for any site on its inventory. In the alternative, the City could commit (in its rezoning program) to abandon its height limit or its FAR, setback, open space, and parking requirements on the 70-unit/acre parcels.

Thank you for considering these comments as you review the City's draft housing element.

Sincerely,

Matthew Gelfand

Ross Silverman (July 18, 2022)

To all involved;

I believe it is imperative that the upzoning include all CG, M, and even R zones adjacent to commercial corridors in South Pasadena.

Thank you

Ross Silverman
1008 Mound Ave.
South Pasadena, CA 91030

Josh Albrektson (Jul 18, 2022)

17 months ago South Pasadena enacted the highest IHO in the state. It was done to make sure that no housing could be built in South Pasadena and it succeeded. It killed every project except one. That is the schoolyard project where they purchased the land not knowing the IHO was about to be enacted.

In case the recent Housing Element letter wasn't clear, HCD actually wants housing to be built and doesn't care for bullshit fake "owner interest" and "Legal R1 lots" that housing will never get built. Here is one line:

"analysis on how given land use constraints such as height limits and the inclusionary zoning requirements may make development infeasible on sites"

After listening to the City Council meeting again I am certain that staff and Placeworks still don't know what the Housing Element law is in relation to the IHO. Amy Senheimer quoted the wrong law in the meeting and staff kept claiming this study proved the IHO to be feasible.

As I have said many times in public comment, you cannot use a density bonus to make anything possible for the Housing Element. It is at the bottom of page 14 of the June 10th 2020 HCD memo on Housing Elements.

" The analysis of "appropriate zoning" should not include residential buildout projections resulting from the implementation of a jurisdiction's inclusionary program or potential increase in density due to a density bonus, because these tools are not a substitute for addressing whether the underlining (base) zoning densities are appropriate to accommodate the RHNA for lower income households. Additionally, inclusionary housing ordinances applied to rental housing must include options for the developer to meet the inclusionary requirements other than exclusively requiring building affordable units on site. While an inclusionary requirement may be a development criterion, it is not a substitute for zoning. The availability of density bonuses is also not a substitute for an analysis, since they are not a development requirement, but are development options over the existing density, and generally require waivers or concessions in development standards to achieve densities and financial feasibility."

Not only that, the city has to show that the IHO is not only barely feasible, but you have to show that it is LIKELY that the buildings will still happen with the IHO AT THE BASE DENSITY.

As I am writing this on Thursday I believe that SoPas will propose a 15% Low Income IHO. A 15% Low income IHO was not analyzed by EPS, but EPS did produce some great data that can be used to analyze IHOs in South Pasadena.

And this data shows that a 15% low income IHO is not feasible in South Pasadena with the current conditions at the base density (or even with significant upzoning). This would be very easy for me to prove to HCD using the data provided. It would also be obvious to anybody who has experience developing buildings or providing loans for buildings. It takes about $5 per sq ft rent to be feasible.

I want an IHO that actually means the buildings actually get built. For 17 months you had one that made sure that no buildings could get built despite my objections and proof it was the highest IHO in the state.

So if you want my support on this IHO this is what I propose:

1. 5% Very Low OR 10% Low OR 25% Moderate IHO

2. Buildings under 10 units fully exempted

3. In Lieu fee for fractions as described in the April Report. Builders can fully pay the In Lieu fee to opt out. (This is required by law)

4. If South Pasadena produces less than 200 units a year starting with the 2024 APR, then the IHO is eliminated.

Or you can enact a 15% Low Income IHO and wait for it to be rejected when I show HCD that it is not feasible using the data in today's report.

There is no developer or bank that would consider a 15% IHO feasible based on the data provided. I will also point out HCD told the City to reach out to developers in part so that the developers would tell them that the 15% is non-viable.

"Other Local Ordinances: While the element now describes the inclusionary housing requirement and local height initiative, it generally does not analyze the impacts on housing cost, supply and ability to achieve maximum densities, including densities proposed as part of this housing element. For example, the analysis of the inclusionary requirement should, among other items, address the 20 percent requirement and cost impacts, 10 unit threshold, in lieu fees and cost of a comparable unit and how the inclusionary relates to State Density Bonus Law. The City should engage the development community as part of this analysis. Please see HCD's prior review for additional information."

--

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

Josh Albrektson (July 22, 2022)

The agenda packet has been published and I have read through it. Your staff still doesn't know the law/requirements of an inclusionary housing ordinance as it relates to the Housing Element, no matter how many times I have posted the paragraph at the bottom of page 14 of the June 10th, 2020 HCD memo.

All proposals guarantees a rejection of the Housing Element, so this entire meeting will be a waste of time.

Alan Ehrlich (August 11, 2022)

Hi Angelica,

A "draft' ordinance originating from CHC was brought to my attention yesterday but I haven't been able to determine if it was in fact enacted. While the draft does not appear to outright ban demolition of older buildings, if it does exist, it might be seen as a constraint on developement.

To the extent Josh A (or HCD) has not mentioned anything about this, either he (they) is (are) not aware of it or, as it appears, is a lesser issue of concern. Could you please confirm is this draft, or something similar, was actually adopted and on the city's books.

thank you,

Alan

International Federation of Professional & Technical Engineers, Local 21 v. Superior Court

California Supreme Court, 42 Cal.4th 319 (2007)

See #3 on Page 20. This is from 2017.

ORDINANCE NO (southpasadenaca.gov)

If this process is removed to allow for the development of affordable multi unit housing we could get more sites. There is nothing culturally or historically significant about most the buildings on Huntington or even those fourplexes on Brent and Park.

Josh Albrektson (September 1, 2022)

These are the programs I would like to see South Pasadena adopt.

In the June 29th letter to HCD the City made a commitment to increase the transportation options to lower income residents without cars (Page 10). I know this was probably a bullshit throwaway line so that you could pretend to be doing something without actually planning to do anything. Here are the bike programs that need to be firm commitments with deadlines and not just some bullshit "We will look into it sometime in 7 years." Of note, just last month 3 people were killed by a car on Marengo St, something that possibly would have been prevented if these changes were implemented.

1. The Mission Street Slow Street program is made permanent. (Bottom of page 9 of 6/29 letter). Bike lanes and no more than one lane of car traffic in each direction would be implemented and remain implemented. Right now there are bike lanes on Mission Street East of Fair Oaks and Bike lanes on Marengo. This would allow the entire eastern half of the city to have a safe route to bike to the train station. This should be done by the end of 2023.

2. The Bike lanes and one vehicle lane is extended west of the train station to Pasadena Street where there are bike lanes that extend to the Los Angeles border. This would allow the west part of the city to safely travel to the train station. This should be done by the end of 2023.

3. Monterey Road in Los Angeles has bike lanes. These lanes end at the South Pasadena border. The bike lanes should be extended to the junction of Monterey Road and Pasadena Ave. This should be done by the end of 2024.

4. South Pasadena schools are known as one of the best schools and there is no safe route for kids to bike to the 2 elementary schools on flat land. As mentioned about just last month 3 people were killed on Marengo Street.

4A. Class one Bike lanes should be done on Marengo Ave from Garfield Park to the City of Alhambra. These would be two way bike lanes on the east side of the street where Morango elementary school is. Going from west to east, it would be Parking south, Traffic lane South, Traffic lane north, Parking north, Bollards, Bike lane south, Bike lane North. This should be done by the end of 2024.

4B. Class one Bike lanes should be done on the South Side of El Centro extending from Orange Grove to Pasadena Ave where Arroyo Vista Elementary school is. Going from North to South it would be Bike lane going east, Bike lane going west, bollards, Parking going east, traffic going east, traffic going west, parking going west. This should be done by the end of 2024.

4C. The El Centro bike lanes should be extended from Orange Grove east to the train station. The South Parking lanes would be removed. Of note EVERY home on the south side of El Centro in this stretch has a garage and driveways that could fit at least 4 cars. From south to north it would be Bike lane going east, Bike lane going west, bollards, traffic going east, traffic going west, parking going west. This should be done by the end of 2025.

Timeline: For the last 4 multifamily projects South Pasadena has not had a single project get building permits, even though the earliest project was initiated in 2018. Extensive changes need to be made in the manner that South Pasadena processes housing. These are just some of the changes that should be implemented.

5. A total of 5 planner equivalents are required to be employed at all times. This could be 4 full time employees with 2 part time. This should be implemented immediately.

6. The pay for entry level planners, both currently hired and for all job postings, should be the average of Pasadena and Los Angeles plus 2% and benefits. This should occur immediately. For the last 7 years there has been EXTENSIVE turnover with the average person lasting 1 year in South Pasadena. There is currently only 1 part time planner who was employed by South Pasadena who was present a year ago.

7. The Community Development Director has her Salary immediately changed to the Average salary of the directors of the Pasadena, San Marino, Alhambra, and San Gabriel.

8. The pre-application is eliminated, effective immediately.

9. The program where a project has to pay for a planner that does the work of the city is immediately ended. South Pasadena can pay for this consultant if it chooses to.

10. All multifamily housing projects 10 units or greater are automatically moved to the front of the line and heard immediately.

11. All multifamily projects between 2 and 9 units are moved to the front of the line after 2 months.

12. Removal of CUP for all projects under 50 units.

13. All multifamily projects that are under 50 units and in the downtown specific plan, Ostrich Farm, or an identified Moderate or Low income site are not required to perform a Transportation study, Noise Analysis, or Climate Change and Energy analysis. These would be deemed acceptable and would automatically qualify for a class 32 exemption. If required, South Pasadena could perform a citywide analysis of Traffic, Noise, and Climate Change for all sites as described above at 30% over the claimed units in the Housing Element.

14. All housing applications are posted online once a week and updated when their status weekly so that it could be determined when the application was deemed complete, when the CEQA analysis was done, and that every part of the Permit Streamlining, SB 330, and AB 2234 act are being followed.

15. It is required that the first planning commission, Design Review, or Cultural Historical committee happen within 6 months of the application being deemed complete for all multfiamily housing projects.

16. All commission hearings are completed within 90 calendars of the first commission hearing for all multifamily housing projects. If not done within 90 days, the application is deemed complete. This includes all chair reviews.

There are extensive charges and requirements for all multifamily housing that make it infeasible. Of note, South Pasadena produced a feasibility study that showed that nothing is viable.

The following changes should be made immediately to make multifamily housing viable in South Pasadena.

17. The FAR requirements as stated in SB 478 are implemented immediately.

18. Multiple Story exception of a 45 degree from the front to posterior is eliminated. (Page 114 of 2nd Housing Element)

19. Private open space required for all projects changed to 75 sq ft per unit

20. Common Open Space required cut in half for all projects.

21. Removal of all requirements for how the private open space is accessed from the apartment.

22. Removal of all dimension requirements for the common open space.

23. Elimination of all open space requirements of elevation

24. Removal of all uncovered area requirements

25. Open Space, either common or private, can be on the roof of the building.

26. Removal of all parking requirements within half a mile of a transit stop for multifamily projects.

27. Removal of all commercial parking requirements within the downtown specific zone.

28. The city cannot require a development to provide public parking. (There are multiple previous housing projects where this was required and the parking lots are empty. The Mission Meridian parking garage across the street from the train station is at 41% capacity on a weekday and 18% on a weekend. It is the lowest % of any parking lot on the Metro Gold Line.

29. Single family parking requirements lowered to one spot.

30. Signage made by the city for all public parking lots. This should be done by 2025.

31. Immediate removal of the Inclusionary Housing Ordinance. The city knows the current IHO makes every project infeasible and both the planning commission and City Council directed the staff to change the IHO. The Staff decided to make it as a program for removal meaning that extensive time will pass with no housing being financially viable.

32. The city is proposing that there be a ballot initiative in 2024 to remove some of the height limit. This is COMPLETELY unacceptable. The height limit was identified as a significant constraint in the 12/21/21 HCD letter and the staff chose to not do anything about it. This should be required to be done in March 2023 and the Housing Element should not be deemed compliant until the height limit is officially repealed.

33. Removal of the following fees for multifamily housing: Tentative Parcel Map, Tentative Tract Map, Lot line adjustment, CHC Appropriateness, Environmental impact report, Zoning text and map amendments, Specific plan application, Specific plan amendment, Development agreement review, Planned development, Technology Surcharge, General Maintenance fee.

34. Removal of the Public Art Fee

35. Water connection and Sewer connection should be at cost.

36. Removal of all fees for ADUs.

Comments Received during the 7-day Review Period (September 15, 2022)

Yvonne LaRose (September 9, 2022)

The Housing Element considerations that are to be finalized by September 15, have a number of issues that are of concern and need to be addressed. Affordability is one of those issues. Some of the very indirect impacts of that issue are addressed in some research I did in April of this year. The research was related to the bills signed by Gov. Newsom regarding restrictive covenants, to wit:

> Governor Newsom Signs Bill Requiring Redaction of Unlawful Restrictive Covenants - California Land Title Association

A quote from the below article subtly reminds one of South Pasadena's Sundown standards and how the residual effects of that era still exist in many tenuous ways and are accepted as the community standard.

> **"We need to provide wealth, building opportunities for those individuals and those families who were left out," Flores said. "We need to provide those wealth building opportunities in communities where the land has a higher value, not because it's fair, but because of laws in the past that made it so and continue to make it so."**

We are challenged with creating more housing for a projected drastic increase in population that does not parallel our neighboring cities of similar size and constituency. The issue of how to create that housing goal with a limited amount of space is definitely a challenge, yet using San Gabriel as an example, the challenge appears to be reachable. The next question is how the vision can be attained while also making inclusion and equity part of the actualization.

The conclusion of the article provides food for thought as we strive to create a strategic housing plan that makes our city legitimately and in reality one of inclusiveness.

> **Because whether people choose to remove racially restrictive covenants, like Beatty and Zak, or keep them as evidence, like Dew, the goal seems to be the same — to remember the past in order to build a more equitable future.**

Let us not use zoning laws to substitute for enactment of a thinly veiled practice of indirectly defaulting to what should be part of our dark history in the form of restrictive covenants couched under some new terminology.

Viva

A more detailed narrative is given in the KPBS article
https://www.kpbs.org/news/local/2021/11/18/keep-remove-racially-restrictive-covenant-attached-yourhome

A significant quote in that articles appears:

> When faced with racism, Dew said his grandparents didn't dwell on it or share it openly with their kids because they had to survive and find ways to thrive, "to be stronger than what society makes of you."

> He understands why his elders felt that way, but he also knows that when we avoid the hard truths of history, they are often erased.

as well as here

"You see it a lot in NIMBYism," said Nancy Kwak, a University of California, San Diego historian. "People are pushing back against changes that would make a neighborhood more accessible, so a really simple example is more affordable housing."

Kwak says when San Diegans talk about property values and things like "I earned this house" or "this is something that I deserve," she hears the same logic that was used in the past to defend segregation.

Although such statements aren't overtly racist, many homeowners' perceived right to control who can and can't live near them helps maintain the inequities embedded in the current housing system, say Kwak and others.

"Make no mistakes about it, yes the covenants are gone, but the zoning took its place and it's been wildly effective," said Ricardo Flores, executive director of LISC San Diego, a local nonprofit committed to affordable housing in the region.

With more than half of San Diego's residential areas zoned for single-family homes, Flores wants to see higher density housing built in these areas.

"We need to provide wealth, building opportunities for those individuals and those families who were left out," Flores said. "We need to provide those wealth building opportunities in communities where the land has a higher value, not because it's fair, but because of laws in the past that made it so and continue to make it so."

As well as this pivotal language that brings us back to the argument about "affordable housing" initiatives:

> The same mindset that gave rise to racial covenants a century ago was on display during the 2020 presidential election when former President Donald Trump made "protecting the suburbs" for white people a key plank in his campaign.
>
> Speaking to a crowd of supporters in Midland, Texas in July 2020, Trump drove the message home.
>
> "People fight all their lives to get into the suburbs and have a beautiful home," he said. "There will be no more affordable housing forced into the suburbs."
>
> A month later, he and Ben Carson, then Secretary of the U.S. Department of Housing and Urban Development, penned an op-ed in the Wall Street Journal entitled, "We'll Protect America's Suburbs."
>
> The tagline read: "We reject the ultraliberal view that the federal bureaucracy should dictate where and how people live."

<u>The hidden history of racism in San Diego deeds</u>

Buried in the deeds of homes and subdivisions across San Diego County are racially restrictive covenants that serve as stark reminders of the region's racist past.

Without mentioning race, Trump clearly painted a picture of an imagined white-suburb under attack from "outside" forces that would change the neighborhood and perhaps even the value of one's home.

Across the country and in San Diego suburbs have become increasingly diverse, but in this case, many viewed the use of the word "suburb" as a euphemism for "white."

While racism is just one of a number of reasons why California remains mired in an affordable housing crisis, experts argue it's important that the history of housing discrimination remain front-and-center in our present-day debates.

Because whether people choose to remove racially restrictive covenants, like Beatty and Zak, or keep them as evidence, like Dew, the goal seems to be the same — to remember the past in order to build a more equitable future.

Victor Tang (September 10, 2022)

Hi,

This is Victor Tang, developer for site 3. We have already submitted plans to build 8 market rate units on three parcels. Per 6th Housing Elements, my site will be zoned Affordable Housing Overlay Zone. There is conflicting information regarding the rezoning date:

1. On page 14 under "Program 2.k", it says "Amend zoning to include overlay by Oct 15, 2024."

2. On page 17, under "Program 3.a", it says "The rezoning of the vacant parcels must be completed within one year of the beginning of the 6th Cycle Housing Element planning period, which is October 15, 2022. Sites that are planned to receive the Affordable Housing Overlays in the General Plan and Zoning Code are also addressed by this program."

If the rezoning date is Oct. 15, 2022, does it mean I can submit another plan with 50+ units right after Oct. 15, 2022? Do you have the zoning code and development standard of the Affordable Housing Overlay Zone for me to do a feasibility study? If it is the Oct 15, 2024 date, we have no interests in waiting.

For Table VI-41 on page 144, Tree Removal Application is missing. If a lot for development has native trees, there will be a public hearing by Natural Resources and Environmental Commission. It uses subjective standard and will stall the development for several months. For my past projects, the planning commission asked my architect to redesign so that one oak tree could be preserved. We had to spend a few months to have an alternative design to prove to the planning commission that alternative design to preserve the tree was not feasible.

I hope city attorney can review the Permit Processing carefully from page 141 to page 144 to make sure that the city has satisfied the requirements of SB330 (Housing Crisis Act of 2019). Summary of SB330 can be found here:
https://www.smwlaw.com/2022/01/13/applying-sb-330-in-real-life/ Here are some keys points of interests:

1. Permit Streamlining Act provision requiring completeness determination within 30 days

2. Local agencies must notify an applicant of any inconsistencies with objective standards within 30 days of the full application being determined to be complete if the project has 150 or fewer units, or within 60 days, if the project has

more than 150 units. The local agency must include all inconsistencies in this notification; any inconsistency that is not noted in a timely way cannot be used as the basis for denying a project.

3. A single residence can count as a "housing development project."

4. Only projects with two or more residences are "housing development projects" for purposes of Government Code section 65589.5, which prohibits cities and counties from denying or making infeasible "housing development projects" that comply with objective development standards, unless specific findings are made

Based on item 4 above, the city needs to stop using discretionary review on multifamily development immediately instead of waiting for "the updates to the General Plan and zoning are complete and the Downtown Specific Plan is adopted' (page 141). City can offer developers incentives to subject their projects to discretionary review voluntarily.

30-day deadline for item 1 and 30/60-day deadline for item 2 are critical. For example, a developer can submit a project with 60-ft height. If the city doesn't notify the developer that 60-ft is not allowed by the zoning code before the deadline, city can't deny the project height later.

I talked to other developers and architects. Many are frustrated with the long entitlement process time. I was told there were 60-80 projects in the pipeline and I am not sure how many are qualified "housing development project". As the planning department is short on staff and it may not be aware of the significance of the deadlines in item 1 and 2 above, deadline for notifications may have been missed for many projects. Therefore the city has very limited basis to deny these projects. The city needs to give these projects entitlement quickly to clear the backlog and avoid possible lawsuits.

As the planning department is short on staff, many developers are willing to pay external planners to expediate the review process.

I have another project in Alto de Monterey Overlay District. The zoning code requests 15ft first floor setback and 35ft second floor setback. Even second floor ADU requests 35ft setback. I hope the city can update zoning code and ADU Ordinance in this district to make development feasible.

Best,
Victor Tang

Josh Albrektson (September 10, 2022)

You guys performed a feasibility study that showed that all buildings are not feasible under your current IHO.

This feasibility study did not include carrying costs or the costs to tear down the structure that is on the property.

This feasibility study also used prototypes that are not allowed to be built in South Pasadena.

This feasibility study used a return on cost of 5% and without the carrying and demolition costs claimed that ther prototypes that cannot be legally built in South Pasadena are feasible at 5.2% Yield on cost.

West Hollywood uses a 12% yield on cost for viability. San Francisco says 15-24% is marginal and 25% is feasible.

Using your numbers, a fully market rate project with no inclusionary units would have a 6.8% Yield on cost, again using a prototype that cannot be built in South Pasadena and without carrying or demolition costs.

How exactly can you guys say any inclusionary housing ordinance doesn't affect feasibility when 100% market rate projects (Like Mission Bell) do not pencil out today?

John C. (September 11, 2022)

I believe we can raise height the limit in a way were more than 50 percent of the residents voters would have no problem with it. The way to do that is making a bipartisan deal with the residents of South Pasadena. I will use an example. Example, South Pasadena City height limit is 45 feet what if we say we raise the height limit by 5 feet. Will the residents of South Pasadena make a big deal out of this? In my opinion, no, I do not next South Pasadena resident would have issue. Also, if you put that on the ballot in election it would pass easily because the majority of residents thinking logically will not being making a big fuss over it. I know there will be the minority of the few resident will definitely make an issue out of raising the height limit by 5 feet, but remember not everyone is going to agree with this and also those resident are the minority. But, if you go the other way by saying you want to raise to 110 feet than the majority of residents will say no. I read in the 3rd housing element draft from a previous person comment that the height limit will have be raised by 12 feet. I believe most resident will have no problem with that or even if you ask to raise by 15 feet they still will have no problem. For this to happen the residents need to know how high the city need to raise the height limit and that question has not been answer.

Elizabeth Anne Bagasao, South Pasadena Tenants Union (September 14, 2022)

To Whom It May Concern:

South Pasadena Tenants is attaching our comments on the Third Draft Housing Element that was released for public review on September 8, 2022. It is our understanding that the deadline for the city to submit the third draft to HCD is September 15 however after review of the draft we feel strongly comment is warranted.

We thank you for your consideration of our comments and would welcome any discussion of our response to the Third Draft Housing Element.

Best regards,

Anne Bagasao on behalf of SPTU

SPTU Third Draft Housing Element Comments:

In the July 8 HCD encouraged "the City to revise the element as described…, adopt, and submit to HCD to regain housing element compliance."

After comparison of the HCD letters from December 2021 and the most recent of July 2022, we are concerned that the City has not sufficiently responded to the HCD's comments enough to satisfy compliance.

The July 8, 2022, letter states the following:

> *Local Data and Knowledge: While the element now includes some discussion of historical development patterns and racial exclusion for significant portion of the 20th century, it should include additional discussion of land use practices including zoning, growth controls, height initiatives and any other practices that affect housing choices since the latter half of the 20th century. This information should complement the discussion of the socio-economic patterns within the City and the City relative to the region and based on a complete analysis, the element should formulate appropriate policies and programs to combat past patterns and impacts on inclusive communities.*

The third draft fails to demonstrate strategies to combat past patterns of impacts on inclusive communities.

We assert that building ordinances, based in preservationist practices, create exclusivity and deter inclusion of very low- and low-income individuals, the disabled, and people of color. As stated in Section 6.4.6 on page 101, South Pasadena admits to adopting zoning and housing policies as recently as the 1998 General Plan with intent of limiting inclusivity if not keeping people out. This attitude continues to influence building and zoning ordinances in South Pasadena. A sampling of statements that reflect these attitudes are found in the comments from the Second Draft Housing Element are found within the Third Draft Housing Element

South Pasadena Tenants Union believes that those commenters are in the loud minority and do not represent the many who aspire to achieve a racially, culturally and economically diverse South Pasadena.

During the WISPPA presentation on 9/12, comments like "protect our neighborhoods" and "we are afraid" were responded to by City staff, not with a can-do attitude of encouraging enthusiastic cooperation with the State but a mood that supported the culture of exclusivity indicative of NIMBY culture.

A History of Exclusion

In Section 6.4.6, the Housing Element describes decades of planned exclusion. As per the text referencing the 1963 General Plan,

> "The first three objectives of the Land Use Plan were stated as:
>
> • *To protect the amenities of single family areas from encroachment of inharmonious uses, including higher density residential,* ***where stability and exclusiveness are desired"***

Three and a half decades later, South Pasadena doubles down on its protectionist land use policies. From The Vision Statement for the 1998 General Plan the influencers pull back the drapes of their goal of maintaining a community of historic exclusivity.

> *" In order to preserve our small-town feeling and to flourish in the 1990's and beyond, South Pasadena must be committed to the goals of revitalizing its commercial areas and preserving its single-family residential character… We*

are committed to maintaining a balance between our existing single and multi-family housing units which honors our traditional values and evolving cultural diversity. (emphasis added)

We see phrases in the above passage, that we also hear today in public forum and on social media: "preserve our small-town feeling", "preserve its single-family residential character", "honors our traditional values". This rhetoric, which is elitist, remains the impetus for all things related to building, transit, and most recently wildlife in South Pasadena.

The problem with the fetishization of the past in the form of "cultural heritage preservation", is that it perpetuates systemic bias.

We refer the City to this excerpt from an article written by preservationists, Franklin Vagnone and Samantha Smith and posted a blog to Twisted Preservation, A Cultural Assets Consulting Group. If you can recognize how the existing building code, zoning laws and cultural heritage ordinance reflect the list below, then it is incumbent upon City to do more than what is stated in response to the HCD comment at the top of this discussion.

1. Preservation is essentially an elitist, class and racially divisive activity whose result is a form of economic bias and segregation.

2. History sites can perpetuate a divisive form of nostalgia that supports and validates racism and exclusion.

3. Preservation can limit inclusion and perpetuate racial & social bias by regulating cultural narratives to simple themes.

4. Historical regulations, district codes, and Preservation restrictions can be latently economically restrictive and culturally exclusionary, benefiting only those individuals who can afford the added costs, thus ensuring a form of aesthetically gated communities that reflect the dominant culture.

5. Historic districting and preservation code requirements can be a contemporary form of "redlining" which excludes a diverse economic group of people from land ownership.

6. Preservation is susceptible to the harshest form of capitalism in that only those historic sites that are targeted with money actually get preserved. Preservation choices are a matter of economics, not just history. The most revealing, unglamorous sites have rarely survived, nor have they been preserved.

7. As Preservation has become more professionalized and can require a four-year degree, college has become more expensive and thus constricts the possibility of a racially, culturally, and economically equitable pool of professional practitioners. As a result, professional practices are sometimes biased.

8. Preservationist, right now today, need to stop fetishizing the built environment and begin considering how preservation itself is part of the problem.

9. Look at the money in Preservation. A budget reflects our priorities. Money goes where it is told. There is nothing natural about the market economy or what gets preserved. **Wealth Preserves Wealth.**

10. Language as a tool of bias in Preservation with a weak notion of the appearance of diversity rather than full systemic representation. *

We will direct you to the City webpage for the Cultural Heritage Ordinance. This is the very first paragraph:

"South Pasadena prides itself on the quality and historic character of its neighborhoods and its small-town ambiance. Maintaining these qualities is considered key for retaining residents…"

The ordinance was re-established in 2017 and contains a section that reads:

"To stabilize and enhance neighborhoods and property values…"

It appears that this ordinance, in its entirety, consciously serves to maintain and increase the upper income level status quo. This ordinance, by its own admission, is counter to any inclusive housing growth in South Pasadena.

We ask that the City state within the Housing Element a commitment to analyze the Cultural Heritage Ordinance **for any and all language, policies and requirements that impede affordable housing development and promote exclusivity.** It is not enough to condemn past practices. You must correct them.

Many of these caveats in the Cultural Heritage Ordinance impede the development of new housing. Without amending the ordinance, the City will run into a plethora of issues when actually trying to achieve the goals set forth in the Housing Element.

Example: Ordinance #2315 effective August 18, 2017, 2.6.5 E.3 states that property owners wishing to demolish any property built "at least 45 years prior to application" will have to undergo an approval process by the Cultural Heritage Commission. The procedure requires the property owner to contract incur expense related to the following:

"The determination as to whether a property is a Cultural Resource shall require a deposit by the applicant to cover City costs associated with hiring a historic consultant and/or an Architectural Historian; and/or a deposit to cover the costs associated with the preparation of an Initial Study, Environmental Impact Report, Mitigated Negative Declaration or Negative Declaration."

The ordinance goes on to describe a multitude of hoops through which the for the property owner will need to jump. The Cultural Heritage Commission is a volunteer body that meets once a month. How long does the process to receive sign off form the CHC to demolish a building built in 1978 take? How much investment of time and money is that costing any properties owner who may want to develop more efficient housing on their property?

This one rule alone is a tremendous impediment to the very work you propose in the Housing Element. A "45 year" rolling benchmark would mean that the multiunit complex at 1700 and 1720 Mission Street would have to undergo CHC scrutiny for redevelopment. How does the City justify 1978 construction requiring historical review?

SB 381

We encourage the City to follow the guidelines of SB 381. Opponents of SB381 argue that the conversion of the CalTrans houses to private ownership would create affordable home ownership.

However, the investment that will be needed to rehabilitate the homes to the standards required by preservation guidelines (there is that word again) would not qualify these homes as "affordable".

We ask that the City act on SB381 , and that any surplus houses be converted to affordable rentals. Those structures deemed to be beyond repair should be demolished and the land utilized by the City in partnership with affordable housing developers to build 100% affordable housing as per Program 2.1.

Further regarding the CalTrans properties, we request that the City cease its efforts in blocking the transfer of 626 Prospect to Friendship Pasadena Baptist Church. Not only is that property not ours to control, this legal wrangling looks like a taxpayer funded effort to keep certain people out of our city. Friendship Pasadena Baptist Church is the oldest African American congregation in the area, established in 1893. One would say "an historic black church". The city, bending to the will of a small group of residents, has resulted in two legal attempts to block the transfer to Friendship Baptist Church that would provide housing to low-income families. The bad optics of this story should be of more concern to the City of South Pasadena then it currently is.

Tenant Protections,Homeless Prevention and Preserving Existing Affordable Housing

The Housing Element Third Draft in its effort to demonstrate an understanding of how best to obtain certification has included a couple of programs that, while seeming practical, are incomplete. There is not one mention in the Housing Element regarding programs meant to protect existing very low, low income and moderate income South Pasadena tenants from displacement.

We reference Program 1.c and Program 3.c.

Program 1.c would trigger substantial renovation evictions of which we currently have one ordinance on the books that minimally protects tenants from renovictions. Without protections in place that would allow tenants to be able to stay in the units during construction or to return to units after construction is complete, at the same rate of rent they had been paying when enforcement was issued, the City puts tenants at displacement risk. Renters are the root of our community and to relocate them outside of South Pasadena, where their children go to school, where they may work, congregate, worship and obtain community services such as recreational classes or senior meals, is 100% irresponsible. They are not the peacocks.

We propose that the City adopt an ordinance that would require landlords to accommodate their tenants during required updates and repairs either by allowing them to remain in the units or paying their rent to live in a comparable or market rate unit still within South Pasadena. Once the property is up to code, the tenant would be able to move back in at the same rate of rent they were paying. The same ordinance should include language to protect tenants from actions by landlords that would trigger evictions or prevent the landlords from concocting ways of getting more money out of tenants such as imposing amenity fees.

SPTU is seeing incidents of landlords now tacking on "amenity fees". While rent can only be increased by 8% under AB1482, landlords are now charging arbitrary fees that are to cover "amenities" such as use of the laundry facilities, landscaping, etc. These fees are uncontrolled so not considered part of the rent, much like the resort fees at hotels. One tenant reports that her rent was increased this year by 8% and her amenity fee was increased by 100% put her monthly payment to the landlord well over the allowable amount under AB1482.

Program 3.c similarly displaces tenants without the benefit of local protections. Again, keeping existing tenants housed in South Pasadena should be our goal not relocating them to other communities.

Additionally, any properties that the City might expedite for demolition, that are currently occupied, are most likely affordable. Therefore, in pursuit of acquiring 10 new units of affordable housing we could potentially be losing 20 and in the process displacing the very South Pasadenans who need them most.

We request that South Pasadena include in its Housing Element proactive and concrete actions to adopt tenant protections that would ensure that tenants displaced as a result of Program 3.c are given the best fighting chance of remaining in South Pasadena. This would include, but not be limited to, a local ordinance for relocation fees required for any no cause evictions. We refer the City to that of the City of Pasadena and Los Angeles as models for such an ordinance. As a reminder the City now defers to AB 1482 which requires that landlords only provide one month's rent as moveout fee to tenants who are evicted without cause. That is not helpful in the very least. It's actually insulting.

Maintaining Affordable Housing Inventory

Program 3.f-3.k regarding ADUs, it's our understanding that the ordinance was revised to be in compliance with state law to increase the availability of long term housing, some of which could be affordable rentals.

In the aforementioned program sections, we don't see much about enforcement particularly of the use of ADU's as short-term rentals. It is common knowledge that the housing crisis in Southern California can be partially a result of the proliferation of commercially managed full time AirBnb properties. As far back as 2015, the community of Venice lost upwards of 10,000 units of affordable housing to Airbnb operators.

Without a local short term rental ordinance there is no way to monitor the use of all these new ADU's or to prevent them from being utilize as money makers for already high-income households as opposed to housing for family members or as affordable rentals. We therefore request that the Housing Element include a short-term rental ordinance.

Homelessness

Program 2.f shows no change to what South Pasadena is currently offering as homeless services under the County Measure H funding. We expected that an increase in services would be more responsive to the HCD comments especially since South Pasadena lost its only direct homeless service provider earlier this year. Shower of Hope, which was formerly serving unhoused individuals with mobile shower facilities in District 3 at Holy Family Church was also a site where homeless case managers from Union Station could regularly locate and identify individuals in need of services. Currently, South Pasadena offers no city funded services other than outreach and resource distribution to the homeless community.

Lastly, we see that the City references expanding the contract with Housing Resource Center for provision of services to tenants and those seeking information and assistance with housing programs, outreach and education. Since HRC has had the contract with South Pasadena, (2016) we have yet to see outcomes of said contract.

HRC proposed that their programs services would achieve the following:

> *"…will improve and expand affordable housing options, improve services to the homeless or specials groups, and increase access to resources for low to moderate -income residents in a variety of ways"*

As two volunteer organizations, SPTU and CareFirst who work closely with tenants in crisis and the homeless population of South Pasadena, are not aware of any indication that HRC successfully achieved

this goal. For example in 2020, HRC poorly advised tenants who had received no cause evictions during the LA County Eviction Moratorium telling them that their evictions were legal. This caused at least one family to self-evict from an affordable unit. HRC only responded when contacted by then Councilmember Rick Schneider. It was with the assistance of Code Enforcement and the City Attorney that SPTU was able to prevent the renovictions from going forward and stop the evictions. This action led to the Renoviction ordinance that was adopted later that year.

Additionally, the contract states that HRC will provide educational workshops within the City of South Pasadena. To our knowledge, there has not been such a workshop since 2020.

Because the outcomes of the 2016 cannot be quantified, we recommend that the City release an RFP for the future provision of those services mentioned in the Housing Element that refer to HRC as the provider. It's been six years and it's time for a review and refresh.

Citywide Height Limit Ballot Measure Repeal

We request that a repeal is citywide and not limited to specific areas of the city. A limited repeal would not help us to move the needle on our RHNA obligation. If we are going to do it, do it with the intent of achieving the goal of increasing affordability not protecting exclusivity of certain neighborhoods.

Lastly, we would like to point out that the General Plan Draft action items that provide for affordable housing incentives for "creatives" may not align with fair housing practice and is counter to the goals of the State to increase housing opportunities for all people. Frankly, it's just another legal attempt to keep some people out while encouraging others to come in. We look forward to the public review and comment period for the General Plan and hope that its congruent with the Housing Element, housing equity and inclusion

We thank you for your consideration of these comments and look forward to the implementation of a Housing Element that reflects our values of inclusion, diversity, compassion and equity. We, as South Pasadenans, want to see our City contribute a housing crisis solution by being good Californians and generally decent people.

Sincerely,

Anne Bagasao on behalf of South Pasadena Tenants Union

Elizabeth Anne Bagasao (September 14, 2022)

SPTU would like to add that the Third Draft Housing Element does not go far enough to support and assist low income and moderate income residents who live in South Pasadena today. The City has an opportunity to do more for these residents especially tenants with the Housing Element. Please take the opportunity to protect existing tenants and keep this individuals and families stable in our community.

Sincerely ,

Anne Bagasao
Sent from my iPhone

Comment: Dr. Josh Albrektson (October 20, 2021) informs the City that he will send in many public comments. Dr. Albrektson states that the Housing Element claims that the inclusionary housing ordinance provides streamlined process and provides benefits above the state density bonus. He believes that neither is true since the density bonus is the minimum required by state and there are no actual incentives or "streamlining." Dr. Albrektson is asking for clarification for the incentives and streamlining stipulated in the inclusionary housing ordinance.

- **How addressed:** The City's Inclusionary Housing Ordinance is mandatory for projects of a certain size, unlike the option to take advantage of state density bonus law. In addition, certain incentives are provided under the Inclusionary Housing Ordinance if applicants comply with objective design standards.

Dr. Josh Albrektson (October 30, 2021) claims they have gone through every moderate and moderate plus site in the Housing Element. Dr. Albrektson informed the City that he created a spreadsheet listing every site that has a "significant problem." He provided a link to the list of sites he has comments on. Problems are specified as sites with no street access, already have homes on them, community parks, and on steep mountainsides. Sites not on the list are appropriate to include by the Dr. Albrektson's standards.

- **How addressed:** The City evaluated all sites on the sites list individually and confirmed that they were suitable to include in the inventory.

Dr. Josh Albrektson (November 2, 2021) stated that the inclusionary housing ordinance is a significant developmental constraint and listed his issues with the ordinance. Dr. Albrektson stated that the there was no feasibility study done and that the City was using it to fulfill their RHNA allocation. Dr. Albrektson compared the inclusionary housing ordinance to other jurisdictions in the State. Dr. Albrektson states that the Housing Element cannot be considered compliant as long as the inclusionary housing ordinance is in place. He states that it needs to be repealed and replaced with a researched feasibility study and warns that as long as the inclusionary housing ordinance is in place, nothing will be built in South Pasadena.

- **How addressed:** Additional information about the Inclusionary in-lieu fee study that the City has been conducting has been included in this draft in Section 6.4. Program 2.i in Section 6.8 commits the City monitoring the effectiveness of the Inclusionary Housing Ordinance annually and revising the ordinance if needed to improve its effectiveness at producing affordable housing units.

Dr. Josh Albrektson (November 2, 2021) stated how the City's projection of 297 ADUs in the next 8 years is unfounded and lacks the data to support the claim. He discussed flaws in the Housing Element's calculations of ADUs because they used building permit data from 2019 and 2020 prior to the adoption of two ADU ordinances, which are expected to make ADUs more difficult and expensive to build. He states this will result in only a small fraction of homes in South Pasadena that can build ADUs. Dr. Albrektson stated that future ADU development will be limited (due to the ordinances) and that the Housing Element's ADU projections are incorrect. He claims that the 2020 and 2021 increase in ADUs is more a matter of demand from the effective ban rather than a sustained trend.

- **How addressed:** ADU building permit approvals in the City continue to increase and permit processing times have decreased. No revisions have been made in response to this comment.

Dr. Josh Albrektson (November 2, 2021) provided comments on the draft Housing Element programs in Chapter 6.8 of the Public Review Draft Housing Element.

- Program 1.d Assisted Housing Unit Preservation – The City doesn't have any deed restricted affordable housing so how can the City monitor and why are there quantified objectives included to preserve this type of unit?
    - **How addressed:** This type of program is required by the state for inclusion in the Housing Element. If any deed-restricted affordable housing is created during the planning period, the City will implement this program related to those units.
- Program 2.a Provide Technical Assistance for Projects with Affordable Housing – More actual commitments are needed in this program. Suggest adding streamlining with specific timeframes and automatic approvals. Current city average is more than 2 years from initiation to building permit approval for multifamily projects.
    - **How addressed:** Revisions have been made to Program 2.a to provide more certain timing for program actions.
- Program 2.b Affordable Housing Production – No affordable housing projects have been submitted or considered through SGVRHT and the city has been a member for multiple years.
    - **How addressed:** No revisions have been made in response to this comment.
- Program 2.c CalHome Program – There is no such thing as a poor South Pasadena homeowner.
    - **How addressed:** Comment noted.
- Program 2.d Section 8 Housing Choice Voucher Program for Rental Assistance – He thinks the City should commit to more than just posting information on their website. Dr. Albrektson doubts that there are any Section 8 vouchers in use in South Pasadena.
    - **How addressed:** According to LACDA, there were 10 vouchers in use in South Pasadena in 2021. Revisions were made to Program 2.d to increase outreach to encourage use of vouchers in South Pasadena.
- Program 2.e Facilitate Density Bonus for Projects with On-site Affordable Housing – Dr. Albrektson thinks the timeline for this program should be much sooner. He says projects that have been approved in the City have been delayed and he believes the city could process this type of approval more effectively.
    - **How addressed:** No revisions have been made in response to this comment.
- Program 2.j General Plan Affordable Housing Overlay – Dr. Albrektson said that allowing 30 units per acre via the proposed overlay in areas that already allow 24 units per acre isn't sufficient incentive for applicants to include affordable units in their projects. He stated that in order for this overlay to work as an incentive it must give the applicant more height or density. He mentioned the City of Berkeley's affordable housing overlay as an example.
    - **How addressed:** Most of the sites included in the Housing Element that are proposed to received the Affordable Housing Overlay only allow lower densities currently. No revisions have been made in response to this comment.
- Program 2.l Facilitate Affordable Housing on City-Owned Property – Dr. Albrektson referenced comments he made on this program in another comment he submitted.
    - **How addressed:** Program 2.l has been substantially revised since the last draft of the Housing Element.
- Program 3.d Enable Parcel Assemblage – Dr. Albrektson thinks more incentives need to be included with this program.
    - **How addressed:** An additional incentive has been added to Program 3.d along with more detail about program timing and implementation.

- Program 3.f Allow and Facilitate ADUs – Dr. Albrektson stated that the city currently takes over 4 months to process ADU applications. He also said that it is difficult to find the ADU brochure on the City website. He commented that the recent changes to the City ADU ordinance make it impossible to use prefabricated ADUs on historic properties which make up 60 percent of all single-family homes in South Pasadena. In addition, he thinks that the terrain in the Monterey Hills wouldn't allow for use of pre-fabricated ADUs. He also noted that he doesn't believe this program or the other programs related to ADUs will increase ADU production.
    - **How addressed:** The City processing time for ADUs has decreased in recent months. The applications received and building permits approved for ADUs has continued to increase substantially during 2021 and early 2022.
- Program 3.j ADU Amnesty Program – Dr. Albrektson states that no one will make an ADU deed-restricted for affordable households in exchange for the waiver of $160 in city fees.
    - **How addressed:** Comment noted.
- Program 3.l Increase and Maintain Planning and Housing Staff Resources – Dr. Albrektson states the things called for in this program should be a basic function of a city. He states that the City's planning staff works too much and should be compensated more and turnover is high. He requests that this program commit to increasing salaries for the city staff positions mentioned in this program.
    - **How addressed:** Comment noted. The City has already made progress implementing Program 3.l which is noted via revisions to the program in this draft.
- Program 3.m Implement SB 9 and SB 10 – Dr. Albrektson thinks the program should be rewritten related to SB 10 with a better understanding of the law. He states that the City Council has spoken out against SB 9 and SB 10 and they will never be enacted in South Pasadena. Related to the parcels in the moderate and above-moderate sites inventory with 2 units assigned to them due to SB 9, he states that the City should include a requirement to eliminate single-family zoning on non-historic properties with a specific deadline if the city wants to claim these units in case SB 9 is overturned.
    - **How addressed:** The City took action by urgency ordinance to establish objective standards for SB 9 in December 2021, and will adopt a permanent ordinance, with updates based on more recent State guidance by mid-2022. Revisions have been made to Program 3.m with this updated information.
- Program 4.c Flexible Zoning Regulations – Dr. Albrektson states that the city's zoning regulations are not flexible.
    - **How addressed:** No revisions have been made in response to this comment.

Dr. Josh Albrektson (via email to HCD, November 4, 2021) stated that City staff planner Liz Bar-El (in an email she sent to HCD) compared the inclusionary housing ordinances of South Pasadena and Pasadena and said that they were the same because both jurisdictions have a 20% inclusionary requirement. Dr. Albrektson claims that South Pasadena has a much deeper affordability than Pasadena, which is significantly different because rental costs contrast for a moderate and very low income homes. Additionally, the commenter said that Pasadena has much less significant developmental limitations than the City of South Pasadena.

- **How addressed:** Refer to earlier response related to the Inclusionary Housing Ordinance.

Dr. Josh Albrektson (November 8, 2021) provides an in-depth personal analysis of the Draft Housing Element. His analysis is over 100 pages and provides a detailed examination of each section under the

scope of Dr. Albrektson's critique. Throughout this analysis, Dr. Albrektson references emails he's sent in the past.

- **How addressed:** See earlier responses.

Dr. Josh Albrektson (November 12, 2021) stated that the City is implementing a new HVAC and VOiP Phone system into City Hall in 2022 and 2025 at a cost of $360,000 and $480,000, respectively. Dr. Albrektson stated that the City is also spending over $200,000 for security enhancement. He claims that this is strong evidence that there are no plans to have the current use of city hall end in the 6th cycle.

- **How addressed**: The City Hall site has been removed from the sites inventory in this draft.

Anthony Dedousis, Director of Policy and Research of Abundant Housing LA (November 14, 2021) states that their letter is a joint response from Abundant Housing LA and YIMBY LA. They claim they submitted a comment letter in April 2021 and highlighted inconsistencies in that original email. They stated that the new draft does not meaningfully address their previous comments. They believe that the new draft of the Housing Element is not consistent with HCD's instruction, does not comply with AFFH requirements under AB 686, and does not include programs with concrete actions to facilitate housing production. They state that there are 6 issues that remain unaddressed in this Housing Element, including:

1. Planning's process for selecting sites and assessing their capacity fails to account for parcels' likelihood of development, and its draft site inventory includes many parcels where housing development is extremely unlikely.
    - **How addressed:** The City has continued to reach out to property owners about interest in development of sites in the inventory. Additional information has been added to Appendix A as applicable.

2. Planning has counted many vacant sites towards the moderate and above-moderate income RHNA targets, despite their unsuitability for housing production.
    - **How addressed:** The City evaluated all sites on the sites list individually and confirmed that they were suitable to include in the inventory.

3. Planning has made an overly optimistic forecast of future ADU production which is unlikely to be achieved even with aggressive policies.
    - **How addressed:** See earlier responses regarding ADU production.

4. Planning misinterprets a SCAG analysis of regional ADU affordability to suggest that a significant share of future ADUs in South Pasadena will be affordable to lower-income households, which is unlikely based on local rent data.
    - **How addressed:** Revisions have been made to Section 6.6 and Appendix E, however the City continues to rely on the SCAG affordability analysis as it is the best data available.

5. Planning's proposed Inclusionary Housing Ordinance is unlikely to achieve a significant portion of the lower-income RHNA targets, due to the economic infeasibility of redevelopment where high set-aside percentages apply.

- **How addressed:** See earlier response regarding monitoring of the effectiveness of the Inclusionary Housing Ordinance.

6. Planning fails to affirmatively further fair housing and break existing patterns of residential segregation in their site selection and their general approach to the housing element update, despite the City Council's recent adoption of a resolution to acknowledge "past practices of institutionalized racism" and a commitment to being an inclusive community in the present.
    - **How addressed:** Section 6.4 Fair Housing Assessment has been substantially revised since the last draft to address comments received and to address a new state law AB 1304 that went into effect since the previous draft was released.

Both organizations have three additional concerns with the Draft, including the forecast of future ADU Production, No Net Loss Buffer, and Fair Housing Issues and AFFH Compliance.

Dr. Josh Albrektson (December 14, 2021) claims it has taken too long for a multifamily housing project to be approved. Dr. Albrektson states that it takes about two and a half years from the day it was presented to the planning department to the first chance at approval. Dr. Albrektson claims there have also been requests for redesigns, as well as delays from the City.

- **How addressed:** No revisions have been made in response to this comment.

Sonja Trauss, Executive Director of YIMBY LAW and California YIMBY (February 28, 2022) provided their policy recommendations for 6th Cycle Housing Elements. They noted that the policies and programs section of the city's Housing Element must respond to data, analysis and findings presented in the Housing Needs section. They made specific policy recommendations in 5 categories that are summarized below:

1. Affirmatively Furthering Fair Housing
    a. Prioritize rezoning in high resource, historically exclusionary neighborhoods.
        - **How addressed:** Historic exclusionary practices occurred throughout South Pasadena. Rezoning to address housing needs will address all income categories and will take place in areas of the City that are high resource.
    b. Establish a strong tenant protection ordinance so that new housing benefits everyone.
        - **How addressed:** No revisions have been made in response to this comment. However, revisions have been made to Programs 1.c to address the need for tenant protection in addition to Program 1.d which was already included in the draft Housing Element.
    c. Support homeownership opportunities for historically excluded groups. The housing element should identify opportunities to create a variety of for-sale housing types and create programs to facilitate property ownership among excluded groups.
        - **How addressed:** The City's Inclusionary Housing Ordinance was adopted in 2021. Part of its intent is to create more homeownership opportunities for lower income residents or those who would like to become residents of South Pasadena who have historically been excluded. In addition, Program 5.c has been added to this draft to support inclusion and to remove racially restrictive covenants from property deeds citywide.
2. Site Capacity
    a. Adequately plan for density. Ensure that a site's density will accommodate the number of homes that are projected to be built. In addition, make sure height limits, setback

requirements, FAR, and other controls allow for adequate density and the ability to achieve a site's realistic capacity.

- **How addressed:** Zoning work called for in Program 3.a addresses this comment. Revisions have been made to that program and to Section 6.4 to address constraints associated with existing development standards.

b. Provide sufficient zoned capacity to accommodate all income levels, including a minimum No Net Loss buffer of 30%.
   - **How addressed:** The City is committed to complying with state no net loss statute and has included as many suitable sites as possible that can be analyzed to be adequate. The number of sites included in this draft exceeds the City's RHNA. Residential development will be allowed on a substantially larger number of sites once the General Plan, DTSP and associated zoning changes are complete.

c. Use data from the 5th Cycle to calculate the likelihood of development for your 6th Cycle site inventory.
   - **How addressed:** Housing regulations statewide and locally in South Pasadena have changed significantly in the last two years including related to ADUs and with the adoption of the Inclusionary Housing Ordinance. Basing likelihood of development for the 6th cycle on the 5th cycle housing unit development doesn't make sense in light of these changes.

3. Accessory Dwelling Units
   a. Commit to an automatic mid-cycle adjustment if ADU permitting activity is lower than estimated in the housing element.
      - **How addressed:** Programs 3.g and 3.h address this comment.
   b. Incentivize new ADUs, including those that are rent-restricted for moderate or lower-income households or that are prioritized for households with housing choice vouchers.
      - **How addressed:** Programs 3.g, 3.i, and 3.k address this comment.
4. Zoning
   a. Allow residential to be built in areas that are zoned for commercial use.
      - **How addressed:** Sites currently zoned for commercial use are proposed to receive the Affordable Housing Overlay or to have their base General Plan land use and zoning changed in order to address the City's RHNA.
   b. Allow flexibility in inclusionary zoning.
      - **How addressed:** The City's Inclusionary Housing Ordinance allows a variety of options depending on the project type and whether an applicant chooses to comply with the objective design standards in the ordinance.
5. Better entitlement process and reducing barriers to development
   a. Ensure that the city has a ministerial process for housing permitting, especially multi-family housing, and remove impact fees for deed-restricted housing.
      - **How addressed:** The sites rezoned to address the lower-income RHNA as called for in Program 3.a of this Housing Element will allow projects with 20 percent affordable units ministerially. Other projects are eligible for ministerial review under state law.
   b. Reduce parking standards and eliminate parking minimums.
      - **How addressed:** Program 3.a calls for the city to evaluate parking requirements as part of the DTSP and zoning amendments to implement the Housing Element.
   c. Cap fees on all new housing.
      - **How addressed:** No revisions have been made in response to this comment.

d. Provide local funding. There are three new revenue streams that should be considered: 1) Transfer tax, a one-time payment levied by a jurisdiction on the sale of a home, may be utilized to raise much needed revenue to fund affordable homes; 2) Vacancy tax may be collected on vacant land to convince landowners to sell their underutilized properties and be used to fund the construction of affordable homes; 3) Commercial linkage fees should be adopted or revisited for increases on new commercial developments.
    - **How addressed:** No revisions have been made in response to this comment.

Anne Bagasao/John Srebalus ((May 2 2022)

Our comments are primarily focused on 6.4 Fair Housing Assessment.

1) 6.4.1 Outreach

We question the validity of the data collected in community meetings during the Spring and Fall of 2020. South Pasadena residents and city staff were in the throes of a global pandemic. After delaying this process for two years, the City, in all it's wisdom, determined that the best time to ask for public participation on the Housing Element was two months into an internationally unprecedented health and economic crisis.

- **How addressed**: The City held the following meetings to gain additional input on the draft Housing Element. #1 Public Workshop on October 21, 2021. #2 Developer Forum on August 15, 2022. #3 Community Outreach at South Pasadena Farmer Market on August 18, 2022. #4 Community Forum and Informational Workshop on August 20, 2020. Comments received at this meeting have been included in Appendix B.

At this time, South Pasadena Tenants Union was hyper focused on keeping South Pasadena tenants in their homes with little or no help from the city's contracted agency Housing Resource Center. The City planning department and City Manager's instead of trying to help tenants, were busy scheduling important data collection surveys and meetings that would impact the future of South Pasadenans for decades to come. This was extremely poor planning on behalf of the City as many of us were scrambling to find the capacity to shift mental gears away from how to avoid getting sick to addressing the complexities of RHNA numbers and development in our city. We are not satisfied that City outreach to residents was adequate and therefore not accurate. As evidenced in the poor response to these surveys and attendance at meetings that were exclusively available to those with internet access in their homes, computers or mobile devices, we submit that your assessment data is insufficient and therefore your assessment is flawed.

- **How addressed:** The normal operation of the City was significantly affected by the COVID19 pandemic, resulting in the closure of City offices, as well as financial challenges for the City. This created new situations with which the City had to contend with, and at the same time address the housing element preparation in a challenging new work environment. We apologize for any impact that posed on SPTU and other participants. The immediacy of the health issues became a priority, but the State did not authorize any extensions of the housing element timeframe, and a small staff struggled to attend to both efforts. As the City pivoted to virtual meetings and events, outreach efforts persisted. The web page contains an opt-in mailing list link, and both respondents have taken advantage of that opportunity and have been receiving emails from housingelement@ on a regular basis informing about related events, meeting or milestones. City staff has always been open to suggestions for participation but is not aware of any offer to provide information from the respondents.

It is stated that outreach was done online and through emails however both John and I were either excluded from participation or were not kept in the loop. We recall that in September 2020, an email was sent to Planning Director Joanna Hankamer with a copy to all members of the Council, Margaret Lin and Arpy Kasparian. Concurrently, similar community meetings were being conducted by the City regarding the Climate Action Plan. I remarked in my email dated 9/30/2020 that I was impressed with the content and frequency of the email contact from the City regarding the Climate Action Plan meetings. The majority of South Pasadenans ,who would be able to provide the most valuable input with regard to affordable housing needs, were managing unemployment issues, homeschooling and health issues. The City is well aware of the advocacy and work that South Pasadena Tenants Union, CareFirst and CalTrans Tenants United invest voluntarily and passionately into housing issues in our town. It is inexcusable, that the City did not ensure that we were at every meeting and could have easily emailed us directly as everyone in Planning and on the Council has our contact information on hand.

- **How addressed:** The comment appears to reference issues that occurred two years ago, with significant communications, outreach meetings, public meetings, and plan amendments since. Both respondents are included in the email list that regularly receives information. As the CDD employees referenced in this comment (Joanna Hankamer and Margaret Lin) are no longer at the City, current staff is not aware of the 9/30/2020 email and how it was followed up at that time. We disagree that ensuring that SPTU was at every meeting is without excuse or the responsibility of the City. As respondents were included on the mailing list and staff had communications with SPTU, significant efforts were made along the way to include the commentor.

In the Outreach Summary section of 6.4.1 the document states that "feedback was received from members of the public, stakeholders, elected officials and others." South Pasadena Tenants Union and CareFirst are the viable stakeholders in issues of affordable housing, the homeless and low income households. The Housing Element document fails to identify these "stakeholders" referenced in 6.4.1. If the purpose of this plan, which I understand has cost us tens of thousands of dollars and hundreds of hours of staff time, was to produce the best possible housing element, why did the City not go out of its way to make sure that we were at 100% participation?

- **How addressed**: The City held 7 public workshop, a developer forum and conducted an online community survey in addition to regular updates at the Planning Commission and City Council to keep the community engaged and updated on the Housing Element update process.

In my email addressed to Joanna Hankamer, et al. on 9/30/2020 I mentioned that real estate development interest group Abundant Housing LA was actively recruiting non-South Pasadenans to attend the meetings to push the pro-development anti-affordable housing agenda. While SPTU was not in attendance because we were busy keeping South Pasadenans housed and the homeless cared for, Abundant Housing LA mouthpieces were at the table affecting housing policy in South Pasadena. Abundant Housing LA went so far as to take out sponsored social media ads to encourage their members from Los Angeles to infiltrate our community meetings. Of the attendees at the Fall workshop, to which you are using data to support your assessments, 10% were identified as Abundant LA members.

- **How addressed**: The commentor appears to clarify that 10% of the members at the Fall workshop were members of Abundant LA. This cannot be verified, and is not a group affiliated with the City. When a meeting is open to the general community, the City cannot control its participation. All are invited to attend. Ultimately the proposed housing element policies are developed based on a number of factors, including State law, HCD guidance, planning principles

and public comment. The housing element team did its best to use the input received from all, whether in large or small numbers.

In July 2020, Mayor Khubesrian called a private meeting with four residents to discuss the housing element. Two were from CareFirst and only one member of South Pasadena Tenants Union was invited. The fourth was Josh Albrekston. The discussions in these meetings were not made public. Does the City or any of the consultants know if content from discussions in that meeting were used to form the Housing Element documents in any of its forms? If so, it should be disregarded because it was no part of public record. To my knowledge, City Manager Stephanie De Wolfe and Joanna Hankamer were in attendance but no other members of the Council.

- **How addressed:** Consultation with individuals outside of public fora is not prohibited and remains a valuable way to understand community concerns. Current staff is unaware of this meeting and its contents. The parties the commentor references have continued to provide comments during the evolution of the housing element drafts, and remain engaged in public dialogue.

On March 3, 2021 the City was to have posted the revised Housing Element for public review before closing for the weekend starting on March 5th. I received a message from Joanna Hankamer at 11:09 on March 5th that the agenda was delayed.

- **How addressed:** All agendas for public meetings were posted in compliance with the Brown Act. The dates and times stated would comply with the Brown Act. As Ms. Hankamer is no longer with the City, we have no further information about this event.

Conclusion:

When you come to the public and ask for our help but then don't make a good effort to provide us with the resources to participate, we question the commitment of the City in seeking community input. We should not have to chase down City staff to be able to participate. The City should make public participation as accessible as possible by ensuring that every resident is informed, and informed again, and that all stakeholders are at the table before moving forward with assessments and data and reports that claim to represent public interest.

We will not legitimize the Housing Element with our further analysis and feedback and demand more public input. We do not accept your findings as a true representation of housing needs in South Pasadena. Also, much of the data is over two years old. Much has changed. Much has changed.

- **How addressed:** The City attempted to keep the public informed of processes and to provide opportunities for input given the resources available to it. While more potentially could have been done in the past to encourage more involvement, we are unaware of any noticing that did not meet applicable codes. Due to extremely high staff turnover during part of 2021 direct outreach to certain groups was unable to be completed. It appears that those groups are now well engaged and able to participate in the remainder of the process. Their comments on the content of the element are well taken.

Josh Albrektson (May 2, 2022)

This Housing Element doesn't address the main problems HCD had with the October Housing Element. For everything related to the 2017 laws and the 6/10/2020 HCD memo there is no significant

difference between this draft and the October draft. It doesn't show how 65 to 70 DU/Acre is achievable under the base zoning of South Pasadena, it doesn't show how the highest inclusionary housing element in the state affects feasibility, and it doesn't address the timeline and how it takes multiple years to approve multifamily homes.

It also is unchanged in the Above Mod/Mod category even though there are multiple claimed units on hillsides and backyard tennis courts that due to environmental constraints homes can never be built.

It includes the three grocery stores and business park that SoPas was told to remove. And it goes from assuming 297 ADUs to 318 ADUs even though HCD told South Pasadena it should be around 10 ADUs per year. There also was none of the outreach performed that HCD told South Pasadena they were required to do and none of the public comments was address in the Housing Element. This Housing Element completely ignored all of the problems that HCD had with the October Housing Element and will be rejected just like that one was. Of note, I sent an e-mail on March 18th that was much more extensive regarding the October Housing Element. Everything in that e-mail still applies to this new Housing Element draft --

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

- **How addressed**: Program 3.f, Allow and Facilitate ADUs, Program 3.g, Monitor ADU Production and Program, Program 3.h, Back up to Address Shortfall in Anticipated ADUs and Program 3.i, ADU Amensty Program have all been updated to address HCD comments and provides a realistic path for the incentivizing the production of ADUs to meet the City's RHNA.

Delaine W. Shane (May 2, 2022)

Dear Honorable Mayor and Council Members:

I appreciate the opportunity to comment on the subject document; however, a frank discussion of what really is at stake beyond this documentation is even more important. South Pasadena cannot simply stand by and do whatever the State dictates on housing, while not equally judging the truly complex intricacies, relationships, and outcomes of water supply/drought, climate change, unequal economic/social justice issues, misguided actions that harm historic preservation, and minimizing fiduciary responsibility regarding the sale of Caltrans properties.

I fully understand the constraints that this subject document must adhere to as based on recent legal state mandates, and yet we cannot divorce ourselves from other planning and environmental areas that clearly interact with the proposed draft Housing Element. All documentation should be discussed in unison instead of separating the Housing Element from the General Plan Update, the Specific Plan Update, Zoning modifications, Environmental Impact Report, and even the already approved Climate Action Plan. It is a complex undertaking to plan the City's future when there are so many aspects to consider. All sides of this debate on housing must be heard; these plans are so vital to the City's development for the next 20 to 30 years in the long-term and even more so in the short-term within the next eight years.

My comments are divided into two sections: general perspective for your consideration and specific comments on the subject document for the planning consultants. Yes, the State long ago forcefully told our community that we residents must prepare for a freeway to be built through South Pasadena. We

stopped that transportation fiasco and now we must stop the outrageous and exaggerated RHNA mandate and the related state housing legislation that will shred the character of our city. We need to control our own destiny. That is true democracy.

South Pasadena needs more affordable housing—without question. Housing should not be about pleasing the State or the for-profit developers who focus on luxury units. South Pasadena housing should be planned and accommodated in a sustainable manner for our residents and for those yet to come at truly affordable prices. This planning needs to be within the context of a small city that is merely 3.5 square miles and that will be able to operate with sustainable infrastructure, environmentally supportive practices, and financially sound protocols for our residents (homeowners and tenants, rich and poor, and the entire spectrum of diverse ethnicities, religions, etc.). That planning effort is very difficult to do today with the State's stranglehold on local jurisdictions, yet we must strive to try together.

We cannot follow blindly in step with the State. As of this moment, only nine out of 197 jurisdictions have approved housing elements for the State's planning cycle (In South Pasadena Review. 2022. By Haley Sawyer, "Progress on Housing Element Plods Ahead," April 29th, page 13). We are not alone in this quagmire of overzealous and misplaced mandates, along with highly restrictive instructions/-requirements on what constitutes a compliant housing element.

A coalition (Mission – Livable California) is currently collecting signatures and asking for support to have a State Constitutional amendment approved by the voters in 2024 to return land use and zoning directives back to the cities and counties. Council Member Evelyn Zneimer is the only elected representative from South Pasadena that openly supports this measure. Why doesn't the whole Council

support this as well? Or, if not, why doesn't the Council push back more with the State and build its own coalition to fight the onerous RHNA mandate? Just because of one appeal that was destined to fail anyway does not mean that South Pasadena should surrender its rights to develop a more reasonable and accommodating expansion. South Pasadena, the fighter, stops after just one loss in a huge battle for control of its destiny? That's not the South Pasadena way that I recognize.

Here is the list of the jurisdictions and their representatives across the State that do support this proposed voter measure: Endorse - Our Neighborhood Voices. This coalition's principles dovetail perfectly with South Pasadena:

• Support housing as a basic right.

• Fight for truly affordable housing.

• Assure self-determination of local government.

• Preserve quality of life in our communities.

• Achieve smart and balanced growth.

• Respect lifestyle choices.

• Protect home ownership.

• Value the American dream.

It is time to collaborate with other jurisdictions and join coalitions to bring sense and true planning back to local control with respect to land use and zoning, and especially in all matters regarding housing in South Pasadena.

Thank you for your consideration.

Sincerely,

Delaine Shane

Delaine W. Shane

2003 Meridian Avenue

- **How addressed:** The commentor's frustration with the state mandated system is noted, and in receiving a RHNA that is challenging in the context of South Pasadena's small area and built-out character. The City explored all options in appealing the allocation when that opportunity was offered, but recent court decisions have made it clear that further legal action on the allocation is not available. Some jurisdictions have posed challenging the statewide basis of the RHNA allocations, but the City has not chosen to proceed in that manner. The City has been actively working toward complying with the complex web of new requirements and the RHNA allocation in order to adopt a compliant housing element as is required under the law.

GENERAL COMMENTS

This generic document does little to validate the excessive development scenario proposed for our small 3.5-square-mile community. Clearly the draft Housing Element is not dealing with today's reality. It is light on specific details concerning critical and defining zoning and planning standards and criteria. It simply notes that this critical information will be determined after the adoption of the Housing Element. Conducting public outreach and participation by the city staff and consultants should not be done this way. This strategy is top-down planning and prevents honest discourse between different views during the genesis of the Housing Element.

The Housing Element should be presented with all other related plans/zoning/design requirements together, so that the full portfolio of planning tools, strategies, and options can be understood and considered in the context of South Pasadena and its position on accommodating future growth.

Notice my statement in the previous paragraph as "in the context of South Pasadena and its position on accommodating future growth." It's about what WE want and not the State. That is a huge difference and an important distinction being made. For example, other than building new housing units, I do not have a real sense from the Housing Element what the City policy and priority is in retrofitting old office buildings for apartments or the real seriousness for educating property owners on developing Junior ADUs. Adaptive reuse of existing buildings and junior ADUs are mentioned in the Housing Element but just that and not much more. Modifying existing buildings can generate less carbon and greenhouse gas emissions over new construction and can also preserve the historic nature/character of the neighborhood where the buildings stand.

Briefly, I will state very obvious facts that cannot be ignored by the City or by the State, and especially not in the Housing Element.

- **How addressed:** Thank you for your comment.

Water Supply and Drought

No matter how we conserve, adding 2,067 housing units will have a significant impact on our current ability to supply water to all South Pasadena residents. Water shortages and rationing are now a reality. We will have less water and more costs by the various water districts that will ultimately be passed onto us residents.

Drought – Upper District

- **How addressed**: Program i.e. - Environmental Health is an integral component of supporting healthy living conditions and preventing fair housing issues that can result from concentrations of contamination. To encourage place-based revitalization through improved environmental conditions, the City will meet annually with water providers to identify funding opportunities to continue to implement mitigation measures at City water sources in San Gabriel and San Marino.

Climate Change

With water shortages/droughts, climate change will impact reservoirs as well. As the levels in our state and federal reservoirs continue to drop to historic lows, there will also be losses in energy levels related to generating hydroelectric power. Apparently, if you subscribe to Clean Power Alliance-SCE, for 100% Green Power, the power source does not rely on hydroelectric processes. However, if you don't subscribe to this service, you may find yourself having more black and brown outages in the future. Refer to: Power Sources - Clean Power Alliance.

Lawns, trees, and other vegetation will have to be watered under key restrictions and quite possibly lawns may be prohibited in the future if we fall within a persistent, severe drought. This will have to be balanced with the need for open space, parks, habitat preservation, as well as considering shading alternatives if more trees die out. It is worth a discussion and evaluation in weighing the growth patterns of the City amid increased impacts to these biological resources.

- **How addressed:** Thank you for your comments climate change will be addressed in the updated General Plan.

Social/Economic Justice

How will building so many luxury condos (while adhering to the state's mandate of density bonuses/inclusionary incentives) benefit or balance the social/economic injustices we have in South Pasadena? There are discussions on "housing mobility opportunities" in the Housing Element for those residents who are struggling from paycheck to paycheck. Except for getting out of substandard rental units, I am not clear as to what difference it makes where individuals with extremely low/very low live, so long as it is in South Pasadena. Repairing the units and allowing people to remain in them at affordable rents (with voucher assistance) and not uprooting them seems the better approach and less draconian. Conversely, is it possible that the Housing Element as it now appears could impact persons of color who qualify for such "housing mobility opportunities" but fail to remain due to gentrification. No one should be paying up to 50% of their income for rent, yet some of our residents do.

- **How addressed**: Program 2.b Affordable Housing Production identifies that the City will establish a Housing Divisions to help fund and build affordable units on sites in higher-income neighborhoods to facilitate housing mobility.

Historic Preservation

I have absolutely no idea as to how historic preservation will survive in this housing planning cycle. Overlays, zoning, development criteria, and design are for another day depriving us of thoughtful discussions about historic preservation, new construction, and possible alternatives. This is simply not transparent and is wrong to have this information withheld or not completed until after the Housing Element is approved or close to being approved. Though this is not the CEQA process, it really shuts down any initial opportunity to set draft policies within our community through collaboration and cooperation. We have a precious historic treasure trove of buildings, and we have a responsibility to be good stewards in maintaining this historic fabric and character of South Pasadena. That doesn't mean everything will be frozen in time. No, we must develop the downtown further, but in a manner that complies with federal standards and our vision of what direction South Pasadena will take: Rehabilitation Standards and Guidelines—Technical Preservation Services, National Park Service (nps.gov).

- **How addressed:** The commentor's statement is noted.

Fiduciary Responsibility/Caltrans Properties

The City and its third-party vendor must stay out of the property management business with the remaining Caltrans properties. Seriously.

Where is the funding source for the City to make such purchases?

Where are the checks and balances to ensure things will be operated and maintained properly?

My neighbors and I are completely against SB381. We live adjacent to or within a few doors down of many Caltrans properties. The views of the Caltrans tenants have also not been heard and are not reflected in the Housing Element. No decision, such as making the properties permanent rental, should be made without the full public participation and discussion with our neighbors, including Caltrans tenants. We support the recommendations made by the South Pasadena Preservation Foundation and want to see existing or previous tenants have success in buying their homes.

- **How addressed:** SB381 provides a way for housing currently owned by the state to be put into use again. It allows the City to be part of the process to ensure that such housing is made available. The City has chosen to move forward with evaluation with each eligible property on

a parcel-by-parcel basis. The housing element does not mandate that any one parcel be accepted by the City, let alone that all do. The housing element does not, nor can it, amend the provisions of the state law created by SB 381. The housing element creates a program to proceed under the SB 381 process. The housing element recognizes that these parcels are an important part of how the city will address its housing needs. However, it does not mandate and outcome on any specific property at this time.

Conclusion

South Pasadena doesn't need a boiler-plated, word padded State template to guide our City for the next eight years in housing development. Instead, South Pasadena needs to be a leader and examine its own resources, listen to its residents (especially renters who don't have a renter on the City Council and yet comprise some 50 to 55% of the population) on what is sustainable growth. South Pasadena also needs to collaborate with other jurisdictions and coalitions to fight the State on these RHNA numbers. If you haven't seen the Los Angeles Times today, one of its leading stories states: "California's population fell, again. But an inland boom could be turning things around." "Population growth remains strong in the Central Valley and the Inland Empire." This article requires a paid subscription, so I am including just a snippet. I am not suggesting that South Pasadena have no affordable housing units. It must. Just what can be determined as truly sustainable and not what SCAG or HCD wants.

- **How addressed**: Thank you for your comments.

SPECIFIC COMMENTS

Comments on Table VI-2 (Summary of Housing Programs for the 2021-2029 Housing Element)

1. Page 5, Program 1.a.—Energy Efficiency. "The City will also continue to encourage retrofitting existing housing units with innovative energy conservation techniques, such as active and passive solar systems, insulation, orientation, and project layout in an endeavor to further reduce dependence on outside energy sources." Why should solar systems continue to be encouraged by our City? While I am in favor of promoting renewable energy systems, more discussion on this one is needed. As noted on page 173 of the Housing Element: "In 2021, 95% of residents subscribed to the 100% Green Power option." That is in reference to the City's success in getting most of its residents to accept the Clean Power Alliance-100% Green Power. So, how does having an individual solar system on one's home improve that goal on energy efficiency from the City's standpoint? It is my understanding that the California Public Utilities Commission may be considering added charges on metering that may make it less cost effective for owners of these systems to get reimbursed when they sell their excess energy. Furthermore, manufacturing of solar panels is not carbon neutral, and there are environmental issues with disposal of older panels. From a financial standpoint, it may not make sense for some property owners to invest in this type of system, especially if they don't intend to stay in South Pasadena for a long time. Financing this type of system with some private installers may result in liens being placed on the properties that can be problematic during subsequent sales. Wouldn't it be more productive for City staff's time and efforts to focus on the other conservation techniques than on the solar systems? Perhaps, it is time to review the hastily approved 2020 Climate Action Plan and revise it so that it can also be properly interwoven into what is now being discussed in this element and the General Plan Update?

- **How addressed:** Thank you for your comment.

Page 5, Program 1.b.—Housing Acquisition. "The City will have priority to purchase the surplus properties after the existing tenants." My neighbors and I continue to object to this proposed action by the City via Senate Bill 381. This legislative piece was never thoroughly vetted by the residents, especially the Caltrans residents. The City has no ability or resources to take on the responsibility of purchasing many if not all the Caltrans properties within South Pasadena. We still wait for the two vacant former Caltrans properties to be converted into pocket parks. The whole process has been plagued with delays, neglect, and empty promises. The real intent we believe is to use these Caltrans properties with existing housing for permanent rentals with oversight from a third-party management firm. That is NOT what our neighborhood wants. We want existing tenants to OWN these properties. The City's policy should be to help the residents navigate and provide/seek funding if there are short falls in financing and not let the residents fail to secure their homes. That is why our community supports the South Pasadena Preservation Foundation's recommendations. These recommendations should be part of this section of the housing element. Managing rental properties by the City or more likely its contractor is not doable. The daily administrative duties and operations, the collections of rent and processing of vouchers, the complaints under an array of situations, the continual maintenance issues, the liability of injuries, etc. will be beyond the capabilities of the City to accomplish this monumental task without additional staffing and costs. A third party will minimize all these issues, like Caltrans did, to get the most out of the renters' money (and taxpayers too) and our neighbors who live next door to these houses and apartment buildings will be directly impacted through the neglect as what is the current situation. The City should act as a facilitator and "hand holder" for the tenants to get them approved by mortgage lenders and to be a point of contact for further advice, if needed. Program 1.b is simply a tremendous undertaking that the City lacks in being able to carry out and could be a financial disaster for us as a community. At the very least, the City should identify in this element, the projected costs of purchasing, maintaining, and operating these properties by the City (or a third-party designee) versus assisting the tenants to buy their homes and then helping them seek grants and loans to fix the housing units. The tragedy is that these were once quaint, working-class homes for hard working people. Caltrans took on the mantel of slum lord and we see the results of their cruel management.

- **How addressed**: See response above.

Page 6, Program 1.c.—Housing Rehabilitation and Code Enforcement. "The City will respond to tenant complaints regarding housing conditions and will proactively pursue abatement of substandard housing conditions identified in the 2022 survey (Table VI-26) or as subsequently identified to reduce displacement risk of tenants living in currently substandard housing." I completely agree with this statement. No one should live in substandard housing; however, I see no text in this housing element that protects the tenant when they make a complaint. This section needs to state how the tenant will not be evicted while the landlord makes good on complying with code enforcement's correction/abatement orders. Will the landlord pay for the tenant to be in a motel until they can move back in upon approval of code enforcement if substantial corrections are required? How will potential retaliation be prevented? Can the landlord use this as an excuse to "remodel" the unit and then increase the rent prior to the tenant moving back in? I believe that renters comprise well over 50-55% of South Pasadena residents. There needs to be more specificity in this section to ensure that existing tenants who have the ongoing misfortune to occupy substandard housing units will not be evicted or retaliated against when they register a complaint with code enforcement.

- **How addressed:** The commentor appears to be addressing concerns about retaliatory actions by landlords against tenants who complain about substandard living conditions. Such retaliatory behavior by landlords is illegal under state law. The city supports challenging such unlawful behavior with referrals to the Housing Rights Center (HRC). These efforts are addressed through Program 5.a.

Pages 6 and 7, Program 1.d.—Assisted Housing Unit Preservation. "The City will maintain and monitor a list of all low-income housing units in South Pasadena that are subsidized by government funding or developed through local or state regulations or incentives." …. "If conversion of units is likely, work with local service providers as appropriate to seek funding to subsidize the at-risk units in a way that mirrors the HUD Housing Choice Voucher (Section 8) program. Funding sources may include state or local funding sources." This program is therefore to show compliance with the RHNA numbers for those residents that are earning extremely low/very low income (1,155 housing units). This program will undoubtedly require the work of two or more FTEs (full time equivalent individuals, either employees or contractors). This program should not be funded by the General Fund, but by the State given such high numbers. If this must go through the General Fund, then the Housing Element should indicate the approximate cost to the taxpayers to implement this State mandate. How will this program be structured so that it can be meaningful to those who truly need such services rather than it de-evolve to just list some numbers (with or without verification) and then hand out fact sheets rather than be proactive and collaborative? After all, there are a lot of programs proposed by the City and not all can be carried out and monitored with a small staff. We cannot pay an endless amount to outside contractors. On Page 7, the last paragraph in the program explains what happens if owners sell their properties before the 55-year (for owner occupied units) and 45-year (for rental units) requirements that ensure such properties remain affordable for their set periods of time. Two questions come to mind. First, if a developer is relying on Program 3.d (Enable Parcel Assemblage) to build multi-housing units and one or more of the small properties are under Program 1.d (Assisted Housing Unit Preservation), does the owner/seller of the existing property still have to pay any money beyond the affordable sell price to the City? Several sad situations exist for why owners of affordable housing may have to sell, such as the death of the primary wage earner, the aging out of the owner, divorce, etc. but under the scenario I have presented here, it appears that only the City and developer would reap the monetary rewards and not the property owner. Second, does the placement of a "roll-over" restriction for another 45-55 years to protect at-risk units where the property owner sells the units prior to the first-time frame legally sound? I am all for ensuring affordable housing, but is there a legal precedent for this "roll over" restriction that essentially restarts the entire period again or just maintain the remaining affordable years left by the previous owner. It just sounds particularly onerous and not a true legal nexus. Could this "roll over" restriction place the City in legal jeopardy?

- **How addressed:** Thank you for your comment.

Page 7, Program 1.e.—Environmental Health. This program needs to be expanded to include air and soil contamination testing and mitigation on properties (especially those with existing structures) to undergo rigorous evaluation before constructing new housing units. I still go on record that the evaluation of buried soil contamination at the Seven Patios Project site was unsatisfactory and should have had more rigorous testing.

- **How addressed**: The commentor's position regarding a past project is noted. The data evaluated from CalEnviroscreen 4.0 showed that South Pasadena had cumulative scores for air pollutants below the thresholds for further action. Parcel level site analysis is done at the time of individual project evaluation, not at the housing element level. The analysis performed did show a threshold for further analysis for water contamination. Program 1.e was included to address the water contamination issues. The city has already begun to address the water contamination issues through remediation activities, seeking reimbursement through legal action against responsible parties, and continued monitoring of water quality. These are addressed through Program 1.e.

Page 8, Program 2.a.—Provide Technical Assistance for Projects with Affordable Housing. The second paragraph should become the first paragraph in this discussion and the number one priority of this program with these edits: "The City will reach out proactively to developers of 100% affordable housing to identify and vigorously pursue opportunities to the maximum extent feasible on an annual basis. The City periodically updates applications and materials, and provides application forms and materials on-line at the Virtual Planning Desk to better assist housing project applicants and for implementation consistency." Still on Page 8 of this program contained within the column entitled eight-year objective with this edit: "Expand housing mobility opportunities through affordable housing in locations distributed throughout the City and encourage affordable development in high resource areas by facilitating timely review of development proposals…." This edit reflects more accurately and explicitly Goal 2.0. Last comment for this program within the same column: "The City's objective is to assist with 100 applications across all income levels during the 2021-2029 planning period. Update materials by June 2023." Clarification of this statement is needed. Does the City's objective for the 100 applications mean just in receipt of or does it seriously mean processing them and seeing these through completion as built units? What if no applications are received at the extremely low/very low income levels? What then? And if high numbers of applications are submitted within a short timeframe, which income level(s) applications will be given the highest priority?

- **How addressed:** Thank you for your comment, please check back with the City's Virtual Planning Desk to find out about housing project applications.

Page 10, Program 2.e.—Facilitate Density Bonus for Projects with On-site Affordable Housing. "The objective is to approve at least 600 affordable units during the planning period through density bonuses to facilitate mixed-income projects, and support expanded housing mobility opportunities for lower-income households." Of course, streamlining approvals means excluding CEQA discretionary action and making it ministerial. This separation rather than complete discussion of the Housing Element, the General Plan Update, Specific Plan Update, Zoning Modifications, Design Requirements, and Climate Action Plan combined is extremely problematic. It is precisely at this ambiguity juncture where we are concerned that with the loss of CEQA input, our voice in how the development is proposed, designed, and pushed through will be lost.

- **How addressed:** Program 2.e has been updated to address HCD comments.

Page 10, Program 2.h.—Incentivize Special-Needs Housing. This program needs to ensure that such housing be distributed throughout the City. Once such buildings are erected, what will be the mechanism to ensure that the operators of said housing will be good stewards and good neighbors?

- **How addressed**: Program 2.h has been updated to address HCD comments.

Page 12, Program 2.j.—General Plan Affordable Housing Overlay and Program 2.k—Affordable Housing Overlay Zone. These overlays should be made available now for public review. One will be adopted by the General Plan approval date and the other no later than October 15, 2024. That does not allow for much public discussion or flexibility in revising such overlays, as needed.

- **How addressed**: Program 2.j has been updated to address HCD comments.

Page 12, Program 2.l.—Facilitate Affordable Housing on City-owned Property. "This process will begin with a review of assets to create a City-owned site affordable housing inventory (will include list of surplus properties) by June 30, 2023." Shouldn't the public know what the City's assets are that could be considered for public housing first before this Housing Element is adopted? We have very little open

space/parks in several parts of our City. Some of these assets also need to be utilized for that purpose. As a side note, it is difficult to hear that the City doesn't even know to the full extent what properties it owns outright, rents, or has easement rights over. And yet, the City expects to deal with all the bureaucracy, financial peril, and personal involvement that will entail encouraging development and managing Caltrans properties. Simply unbelievable.

- **How addressed:** Implementation of a City-owned affordable housing sites inventory will occur after adoption of the Housing Element. Please check back with the City after Housing Element adoption for status updates of this program.

Page 13, Program 3.a.—Rezone and Redesignate Sites to Meet RHNA. This program is nothing more than promoting refill parcels or redevelopment parcels-still a controversial approach for generating more affordable housing. If a property owner wishes to voluntarily participate, then it is not an issue. This program should not be a planning tool in which the City decides which properties are not at their highest and best use. Nor should eminent domain be employed for this program.

Still on Page 13 under this same program: "The types of standards and processes that will or may need revising include height limits, open space standards, parking requirements and findings for design review. The rezoning of the vacant parcels must be completed within one year of the beginning of the 6th Cycle Housing Element planning period, which is October 15, 2022. Sites that are planned to receive the Affordable Housing Overlays (see Programs 2.j and 2.k) in the General Plan and Zoning Code are also addressed by this program." These statements should be discussed publicly now and not near the end of the General Plan Update/rezoning identified as being October 15, 2022. These other documents that the consultants have been writing about will be hundreds if not thousands of pages long collectively. Again, it is the State driving this deadline and that is why the City needs to push back. Height limits, open space, and parking are very critical issues to our neighbors and our community. And we are asked to sign off on this Housing Element without understanding what the City will define as its new standards. Ultimately, we will lose our recourse to remedy mistakes because CEQA will no longer come into play. This is wrong and not democratic.

- **How addressed:** This program is required due to the RHNA allocation to the City. It is being revised, and will demonstrate compliance with State law, including efforts to move toward objective standards and non-discretionary processes for housing.

Page 14, Program 3.b.—Mixed-Use Developments and Adaptive Re-Use. We don't have information on the zoning changes at this point. We need to see how the zoning within the City will change to support the Housing Element.

- **How addressed:** Parcel level zoning detail is not required for approval of a Housing Element. The zoning for particular parcels follow the policy level determinations under the Housing Element. Pursuant to Government Code section 65754(b), City's zoning code is required to be completed within 120 days after the Housing Element has been amended by the City Council.

Page 14, Program 3.c.—Replacement of Lost Units from Residential Demolitions. "Identify affected demolition proposals based on maintaining an inventory of affordable units and require replacement housing in compliance with State law to reduce displacement that occurs as a result of demolition and enable residents to remain in their community." This needs clarity to ensure protection for the residents. Does this mean that before existing affordable housing is demolished, the current tenants will be guaranteed replacement housing before demolition commences? If so, who is responsible for their temporary housing costs (which might last for a year or so)? If not, how can you make a statement that

residents will be able to remain in the community if they are amongst the first "casualties" of demolition? Vacancy rates in South Pasadena are low even for rental units that moderate income individuals can afford. What about the extremely low/very low income population?

- **How addressed:** Please refer to California Government Code Section 65915(c)(3).

Pages 14-15, Program 3.d.—Enable Parcel Assemblage. What if an adjacent property owner does not wish to sell their home to the developer? Will the City then proceed to take the property through eminent domain to ensure that the RHNA numbers are being met? With all the incentives the City is proposing to give to the developer, such as more height, additional stories, waive lot merger fees, and perhaps a lessening of parking requirements in areas that are already built out, absolutely no consideration is given to the residents. There is no acknowledgment from what I can tell from the Housing Element on how much our neighborhoods already suffer and that with new development will be compounded such as deteriorated streets and limited to no parking. The developers cannot fix our current problems. Does the City expect that the character of our small City will remain unchanged with this over-the-top densification? How will the City prioritize the historic homes on the inventory list throughout the City? Many homes have been modified over the years. So, will the City follow the tactic of Caltrans and deem that these historic homes can therefore be demolished? And again, what can other neighbors say about it, when it has become a ministerial action with no CEQA involvement because it fits with an ambiguous housing element with no zoning modifications presented to us at this time to discuss and consider?

- **How addressed:** Program 3.d has been updated to address HCD comments.

Pages 15-19 for Programs related to Accessory Dwelling Units (ADUs). I could not find anything about short-term rentals (e.g., AirBnB). Such housing stock is detrimental to achieving affordable housing goals and objectives. One or more of these programs need to explicitly state the policy of either no such rentals permitted or a set limit with specific restrictions in a policy/ordinance. I am certain there are already residents that have this type of operation in service, so it is important to have a dialogue to see what is most reasonable and fair.

- **How addressed**: Short-term rental analysis will be included in the City's General Plan update.

Page 19, Program 3.m.—Implement SB 9 and SB 10. Isn't SB 10 optional for the jurisdictions? The text indicates that SB 10 zoning amendments would be considered by December 2024. Why the delay? All these pieces need to be examined now. Is the City piecemealing this planning effort? The Housing Element needs to focus more on potential adaptive re-uses of existing commercial buildings and junior ADUs. They are mentioned but their actual potential is not really examined or prioritized.

- **How addressed:** Jurisdictions are not required to adopt or evaluate SB 10. The timeframe stated for examining SB 10 is to allow sufficient time for analysis and community outreach should the City decide that its provisions would be beneficial for housing production.

Page 20, Program 4.a.—Land Use Controls-Emergency Shelters. What does the BP zone mean? I was unable to find the definition in the Housing Element. Location of such shelters are important and the zoning of them should be discussed now and not one year after the Housing Element is approved.

- **How addressed**: BP refers to Business Park Zone.

Page 20, Program 4.b.—Land Use Controls—Transitional and Supportive Housing/Low-Barrier Navigation Centers. This is a euphemism for half-way homes. The City is planning to revise the

Municipal Code so that these homes can be placed without discretionary CEQA review in areas zoned for mixed use and non-residential zones permitting multifamily uses within two years after the adoption of the Housing Element. I know this is also a controversial topic, but it needs to be discussed now. All the "pieces" of the planning jigsaw must be available for people to understand, discuss, and voice their opinions.

- **How addressed**: Program 4.a includes a program to update the zoning designations for emergency and transitional housing. These amendments will occur after the Housing Element is adopted.

Page 21, Program 4.c.—Land Use Controls-Flexible Zoning Regulations. Does this flexible zoning program also include those centers (i.e., half-way homes) in Program 4.b?

- **How addressed**: Program 4.b includes a program to update the zoning designations for emergency and transitional housing. These amendments will occur after the Housing Element is adopted.

Page 21, Program 4.f.—Senate Bill 35 Procedure or Policy. This draft policy on streamlining "eligible" projects per the cited California Government Code needs to be available for us now to review and not by the end of the year when the Housing Element is already adopted.

- **How addressed**: California Senate Bill 35 (SB-35) was signed by Governor Jerry Brown on September 29, 2017 and was effective January 1, 2018. SB-35 applies in cities that are not meeting their Regional Housing Need Allocation (RHNA) goal for construction of above-moderate income housing and/or housing for households below 80% area median income (AMI). SB-35 amends Government Code Section 65913.4 to require local entities to streamline the approval of certain housing projects by providing a ministerial approval process. Please refer to the Government Code Section 65913.4 for more information.

Davis White (May 31, 2022)

To whom it may concern,

The California Department of Housing & Community Development (HCD) recently published a letter in response to Temple City's implementation of Senate Bill 9 (SB 9) which has sweeping implications for other jurisdictions in this process. The letter focuses on the city's ill-founded attempt to reduce the intensity of land use for SB 9 projects without any attempt to concurrently increase intensity elsewhere, as required by the Housing Crisis Act of 2019 (HCA). Any change in intensity of units or size without counterbalancing affects feasibility. HCD has found this violates state law. Temple City's SB 9 ordinance—and HCD's response—also contains a laundry list of don'ts which may affect a jurisdiction's Housing Element compliance. Specifically, the letter called out Temple City's use of square footage restrictions, height and story restrictions, courtyard requirements, parking limitations, LEED standards, underground requirements, and even affordability deed restrictions. All told, such requirements for SB 9-related projects which go beyond standards for other projects may be construed as governmental constraints.

Jurisdictions will have to identify and justify such constraints in their Housing Elements. Lastly, the letter stresses that a jurisdiction's implementation of SB 9 is covered by state laws other than the HCA and State Housing Element Law. This includes, but is not exclusive to,

State ADU Law, AFFH, and Anti-Discrimination in Land Use Law. How a city implements SB 9 has wide-reaching considerations. Jurisdictions should be fully aware that SB 9-related projects are not separate nor exempt from their ordinary zoning laws and instead should be included within existing codes. The point of SB 9 is to give homeowners the means to increase the density of their properties. It is not a dead-end in state law.

Attached to this email is HCD's letter to Temple City for reference.

Sincerely,

Davis White

--

Davis White he/him

yimbylaw.org

(415) 298-0788

- **How addressed:** The City plans to review the SB9 urgency ordinance adopted in December 2021. Such review will allow for review of the standards noted and an implementation process to be addressed. Although this process has been delayed due to other department priorities, a revised ordinance will be developed in consideration of more recently issued comments and interpretation of SB9's provisions.

Josh Albrektson (June 20, 2022) (Twitter Post)

South Pasadena is required to show they have enough zoning to allow 2,067 homes will be built over the next 7 years. They just released a Housing Element that shows where they claim the "Future homes" will be built. Me and @taxingainteasy are gonna take you so see them.

- **How addressed:** Sites included in the Housing Element must allow for and be suitable for residential development. Inclusion in the Housing Element is not a guarantee of residential units being built on a site.

To start with, South Pasadena claims that this entire mountainside will be redeveloped with homes. They have no plans to actually do it and never actually would, but they still make the claim.

(Blue dot is where I am standing for video)

In fact, in the Housing Element they even specifically state that it will always be open space at the same time they claim housing will be built on it. They had these same sites in October and were told to remove them by HCD, but they are still there.

You really don't get a sense of how steep this mountain is until you actually go up there. This will be the first and last time I go up there. [He describes location of and road in relation to estimated "45 degree" slope and presents questions regarding feasibility of housing development on the hillside. Implies 65 homes are going in this area (25+40)]

This is another place where they claim that homes will be built on a mountainside with a 60 degree incline road. Blue marks where I am standing for the video. [He describes location of housing sites in

relation to estimated "70 degree" slope and presents questions regarding feasibility of housing development on the hillside. Implies 11 homes are going in this area (7+4)]

Here is the video for reference.

- **How addressed:** All APNs ending in 900, 901, 904, and 905 have been removed. APN 5308032902 has also been removed. 5312016015, 5312016014, 5301028036, 5301028035, 5301028034, 5301028054, 5301028053, 5301028052, 5301028051, 5301028050, 5301028049, 5301028055, 5306006024, 5306006025, 5306006053, 5306006048 have also been removed because they would have to have the road developed.

SoPas claims that every major grocery store will be turned into low income housing. This Ralphs which serves most of San Marino and Alhambra and is the only grocery store around will be 133 homes, even though the owner never responded to any e-mails from SoPas. (Sound on) Video says: "Does this Ralphs look like it's about to go out of business? Looks pretty busy to me"

- **How addressed**: Ralphs and Vons have been removed from the inventory and Pavillions remains included and is counting the parking lot and not the whole building.

This SilverLake Ramen is actually about to open and at the last City Council meeting the mayor talked about how responsive the staff was to get the permits approved when it hit a snag. But According to South Pasadena this will be torn down in 7 years and turned into 263 homes.

Not only that, but this entire complex is planning to do massive renovations this year. In order to be included as a low income site you have to show that the current use is likely to be discontinued in the next 7 years. You don't spend millions on buildings to tear them down.

Speaking of grocery stores undergoing renovations, SoPas was told to remove this Pavilions from the list. SoPas is claiming they talked to the owner and he now wants to tear it down and build housing. SoPas will not give me any evidence of that conversation.

- **How addressed**: Only the parking lot portion of Pavillions is being included in the land inventory. Development would include ground floor parking and residential above.

Here is HCD telling SoPas in December that these sites should be removed, but they are still there.

This was also featured in an amazing article by @RegJeffCollins with follow up articles by @publiceditor

On a related note, SoPas makes all kinds of claims in their Housing Element for communications with owners, but they don't publish them and have repeatedly refused to show them when asked. I have even put in PRAS and 210 days later I have yet to get a response from SoPas

See these power lines??? They are the main power lines that got from a power plant and supply most of the power to SoPas, San Marino, and Alhambra. South Pasadena claims that 15 homes will be built under these high voltage power lines.

But not only that, they also claim that they will move their Public Works yard here and build 34 units at that site. I am sure Edison is totally cool with storing heavy duty trucks under high voltage power lines. We will just shut down power for a year when it is built.

- **How addressed:** This parcel is 2.73 acres and owned by the City. The southern portion of the parcel is not underneath the overhead lines. The 15 units assumed for this site were anticipated to be able to be developed on this southern portion of the site.

This is the parking lot for Rite Aid and other stores in a shopping complex. South Pasadena claims that the parking lot is not used for businesses. They would be shocked to learn there is a tunnel going strait from the parking lot to the businesses.

Rite Aid would also probably disagree with the assessment that the parking lot is not used for their business.

- **How addressed**: This site was removed from the inventory. Appendix A says the parking lot doesn't provide required parking for the commercial uses to the west meaning that parking doesn't address parking spaces required to be provided by the City.

See this McDonalds??? It is one of the nicest McDonalds I have ever been to. No response from the owner, but South Pasadena claims that they will be turned into 47 new homes.

- **How addressed**: This site was removed from the inventory.

You might recognize a lot of these sites because they are almost unchanged from the sites that South Pasadena submitted over a year ago. They were told at the time most were not eligible, but they are still there.

Now, let's go to some of the little sites that SoPas claims will be housing. It is obvious that they just pulled these from a random computer program and never even looked to see if they were valid. This is my thread from the first draft they had.

They have lots that claim a driveway will be built on a 6 foot strip of land up into the hills.

Does this look like a future driveway up into the hills???

Random street next to high school is apparently going to be a home.

Street demonstration by @taxingainteasy

This home (red) and this persons backyard (blue) will be torn down and turned into homes.

I bet this home doesn't know it is going to be torn down.

15 foot wide strips of land are apparently potential future homes.

Some dudes tennis court(red) and the main walkway connecting Monterey Hills and the High School (blue, called the snake trail) are both supposed to be housing.

This lot has approved plans for a pocket park that is supposed to be built this year. SoPas also claims it will be a home.

This thin strip of land is supposed to be a home.

Sometimes you have random strips on land in the middle of the mountain.

Not Kobe!!!!! This building is half a block from the train station. SoPas claims it will be torn down and replaced with apartments at 70 DU/Acre. The only problem is there is a 25 foot height limit and one parking spot per bedroom minimum parking requirement.

- **How addressed**: From Appendix A: "Existing use is retail commercial buildings and parking lots behind. All four parcels have the same owner. The owner is interested in consolidating the four parcels, adaptive reuse of historic storefront, and developing residential uses on this site. There is potential for redevelopment of the site based on underutilized surface parking, recent project trends and active economic reinvestment in the area. This site is centrally located near transit and services."

Finally, Krispy Kreme. This is not being torn down, we are just happy it is here.

This list is just some of the worst examples from the Housing Element. I don't include how South Pasadena enacted the highest inclusionary housing ordinance in the state to make sure no buildings will be financially feasible, in part because you cannot take a picture of that.

BTW, if you are looking for who to blame for the Housing Crisis,

@GVelasquez72 is in charge of @California_HCD. Under his leadership countless examples like the ones above have been approved. Like Vista being allowed to claim their 10 year old city hall.

You also have @Jason_Elliott and @CaHousingGuy who have yet to refer a single city for prosecution for a lack of compliant Housing Element, even ones that are openly defiant. Jason claimed that Newsom was going to hold cities accountable.

ADDITIONAL NOTES

Outreach to low income housing providers: Need to add reference to City outreach to Hollywood Community Housing Corporation to explore possibilities of partnerships and to understand the needs of LI housing providers.

Site 9 - (Yards): The site identified has been further examined and seems not to be feasible. Change on the notes to say that the current CIP includes a comprehensive assessment of City-owned facilities that may be suitable for relocation of the Yard, in order to vacate the property for an affordable housing project.

- **How addressed:** This site is a city owned site and the current CIP includes a comprehensive assessment of City-owned facilities that are be suitable for relocation of the public works yard, in order to vacate the property for an affordable housing project. The City will remediate any environmental constraints on this site prior to development for residential.

Josh Albrektson (June 21, 2022))

There are a lot of amazing claims made for the low income sites in this new Housing Element. In March before it was published I asked Angelica if she could share anything that will be used to claim a site is suitable and Angelica refused to send anything over (See below) The day after the new Draft Housing Element was published I asked Angelica for specific things related to the claims made in the Housing Element. She refused to send them over. I filed specific PRAS on May 11th for communications with the single family homeowners that they claim will develop in sites 14 and 15, any contact with Edison over the moving of the Public Works yard beneath the power lines for Site 9, the new communications

with Vons and Pavilions about owner interest in developing housing (sites 20 and 21), and communication with this YMCA board member for site 23. These were not broad PRAs and should have returned 1-3 documents each, documents that Angelica should have easy access to. South Pasadena has not filled a single one of these PRAs despite multiple requests. South Pasadena is making claims in their housing element about low income sites and deliberately making sure the public cannot examine the validity of these claims.

- **How addressed**: The commentor's statements regarding the request to produce documents are disputed by the City. The City endeavors to comply with all PRAs through a process monitored by the Office of City Clerk. The city is unaware of any outstanding requests from the timeframe noted, and has provided all non-exempt, responsive documents to the respondent in this context in the city's possession. Since this comment, the city has responded to several other PRA request from the commentor.

Subject: Can I get some information

CAUTION: This email originated from outside of the City of South Pasadena. Do not click links or open attachments unless you recognize the sender and know the content is safe. With the Housing Element release coming up I was wondering if I can get some information. I'm asking for it by e-mail because it would be much easier for you guys than more extensive PRAs. All of this information should be easy to obtain. 1. How many ADU building permits were issued in 2020 and 2021?? 2. Can you give me a list of projects that have turned in applications that the IHO would apply to since it was implemented?? I don't need anything extensive, just the address and number of proposed units in each project. 3. The evidence for each low income site in the Housing Element that you are using to claim as substantial evidence that the current use will be discontinued?? Margaret knows what I am talking about for this stuff. Thanks.

- **How addressed**: The City is following AB 215 requirements for releasing draft versions of the Housing Element for public comments.

Josh Albrektson (June 30, 2022))

South Pasadena just e-mailed a comment letter to residents 8 days before the HCD letter is due. It is an incomplete document and even being somebody who knows housing law it is hard to fully comprehend. This is not real community outreach. Because I am off this week I should be able to provide a comment on some of the things in that letter that is misleading/false by the end of the week. I will include one thing here. " Proposed revisions in the section under Historic Land Development Patterns (approximately page 94) ahead of the sentences about the height limit initiative: The City does not have any growth control or management policies in place, and has not historically," This is just flat out wrong. They enacted the 45 foot height limit in 1983 and also enacted a slow growth policy placing a cap on 60 new housing units a year. They did this in part because Asian people were moving to South Pasadena. They also banned minorities from owning homes until 1965. Here are articles from the LA Times in the 1980's describing South Pasadenas growth restrictions. I have pulled out the relevant paragraphs and

italicized them. https://www.latimes.com/archives/la-xpm-1987-10-25-ga-16043-story.html Minorities, Growth Like other cities in the western San Gabriel Valley, South Pasadena, which covers less than 3 1/2 square miles, has experienced both a significant influx of minority residents and a drive to build. Almost a quarter of the city's 24,400 residents are Asians, according to city officials. Fearing that South Pasadena is losing its character as a typical American small town of single-family homes, residents have battled plans for condominiums and major commercial projects. In 1983, voters rejected a proposed twin-tower office building that had been unanimously supported by the City Council. Then, after Simmons and Getchell petitioned for a ballot measure, voters imposed a 45-foot height limit on new construction. Now Simmons is leading a similar initiative drive to restrict minimall construction in the city. Cap on New Housing Last year, the council, under pressure from citizens' petitions, voted to place a cap of 60 new housing units a year in the city. https://www.latimes.com/archives/la-xpm-1988-11-28-me-363-story.html But city leaders say South Pasadena and its old-fashioned way of life are protected by a community-nurtured resistance to change. South Pasadena was one of the first cities in the region to adopt a slow-growth policy. In 1986, faced with a proliferation of condominium complexes and apartment buildings in the southern part of the city, as well as a voters' revolt, the City Council imposed a 60-unit annual limit on new multifamily developments. "We've protected ourselves pretty well," Woollacott said. Static Population The city's reluctance to build is reflected in population statistics. The population in neighboring cities has ballooned, mostly with new arrivals from Asia, but South Pasadena's has increased by an average of only 84 people a year since 1970. While the city was keeping a lid on new apartment buildings, slowgrowth activists turned down a string of proposed commercial developments, using intense political pressure or the initiative process. For example, in 1983, when a local merchant proposed to erect two multistory office buildings, angry residents petitioned for a ballot measure limiting the height of new construction. The measure won, and the so-called "twin towers" died a sudden and unlamented death. In recent months, two major projects have also succumbed to slow-growth sentiment. First, developer Thomas Stagen withdrew a plan for a 150-suite hotel on Fair Oaks Avenue, citing the community's "virulent opposition" to the project. Then, the City Council, acting as the Community Redevelopment Agency, scuttled a move to declare 74 acres of prime commercial area in the city a redevelopment area, after rebellious local merchants displayed signs portraying the council as a big octopus, seeking to control the city. In 1989 led by a local NIMBY Group SPRIG South Pasadena began implementation for a new general plan that downzoned the city from having a capacity of 60,000 to 25,000. LA Times article at the start: https://www.latimes.com/archives/la-xpm-1989-08-27-ga-1552-story.html General Plan update that includes a excerpt from the Task Force from 1990:(page 13)

https://www.southpasadenaca.gov/home/showpublisheddocument/220/636721709083330000 As the new decade begins, however, South Pasadena is faced with the twin threats of burgeoning multi-residential growth and continued deterioration of its commercial areas and business tax base. South Pasadena did not allow minorities to own houses. In 1964, a latino USC professor was allowed to buy a home because they mistakenly thought he was Native American. There is a TON more racist things in this article that South Pasadena did such as banning black children from the community pool and blocking off a street that connected them to the Latino El Sereno, but those were not housing related. https://www.coloradoboulevard.net/when-south-pasadena-was-a-sundown-town/ Housing In 1964, Manuel Servin, a Mexican-American professor at USC, managed to buy a house in South Pasadena, even though Mexican Americans were specifically restricted from doing so. Native Americans had no restrictions placed on them and City officials mistakenly approved his purchase in South Pasadena. Shortly thereafter, in the mid-sixties the Federal government provided funding for affordable housing with the Altos de Monterey development which brought more racial diversity to the area. Many communities adjacent to South Pasadena did not share the same racist past. El Sereno, Highland Park and Alhambra were far more multi-racial. This created the basis of still more examples of racially divisive attitudes in residents and more law suits against the City of South Pasadena.

Neuroradiologist by night
Crime fighter by day

- **How addressed**: The City is following AB 215 requirements for releasing draft versions of the Housing Element for public comments.

Josh Albrektson (June 30, 2022)

I'm gonna send my comments as I write them because SoPas dropped this letter 8 days before the deadline for HCD to make their findings.

Comments on Responses to HCD Preliminary comments.

1A. City needs to remove all sites from Table VI-44 that have backyard tennis courts, current homes, plans to be a pocket park, sites that do not exist on the APN map, and ones that are trails that are used to get to the high school.

- **How addressed:** The sites included in Table VI-44 that are on slopes are all on slopes less than 20 percent and are developable in accordance with the City's hillside ordinance. Additional detail about projects approved on slopes in included on Page 168 in blue highlighting.

1B. The Los Altos housing development covering SouthWest South Pasadena was done in 1965. Since that time there has not been a single new road built in the mountains of South Pasadena. There have been lots developed, but all of these lots are on existing roads. All lots that do not have road access should be removed, regardless of the slopes.

Page one contains a list of all sites by APN which should be removed.

https://docs.google.com/spreadsheets/d/1CZFzZM41DcAmVWgOUaFgaAU77Lrww9cSRwQ7GVJfWg/ edit?usp=sharing

You all have seen the videos but you can see how unrealistic it is to claim a road will be built down this hill.

https://twitter.com/JalbyMD/status/1538986717599830016?s=20&t=vn8iBXZzAb-xOVD-Rg-HHQ

- **How addressed:** This site was removed from the inventory.

1C. More than 50% of RiteAids business comes from people who park in the parking lot. You cannot just claim "This will be resolved." And the parking lot was not for sale, the whole site including the Rite Aid building was sold about 8 years ago. It was not just the parking lot.

See how many people are using the tunnel to get to the parking lot:

https://twitter.com/JalbyMD/status/1538992058236407808?s=20&t=vn8iBXZzAb-xOVD-Rg-HHQ

- **How addressed:** The Rite Aid sites has been removed from the inventory.

2A. IHO makes every building economically infeasible so they will not be built and SoPas cannot claim it will help spread affordable housing through the city.

- **How addressed**: Program 2.e has been updated to address HCD comments.

2B. The City talks about the single family homes in the South West of the City and how ADUs would help increase housing on those sites. South Pasadena enacted a ADU ordinance that made that area a high fire zone and instituted many restrictions so that ADUs cannot be built in that area. There is a e-mail from Reid Miller of the HCD ADU team to Liz Bar-El talking about and this included in the 5/21/21 e-mail sent out by Paul to the City. (see attached email)

- **How addressed**: The City will comply with state ADU regulations and coordinate with. local fire and safety requirements for allowing future ADUs.

3A. Sent out different e-mail quoting the LA Times articles from the 1980's about how "South Pasadena was one of the first cities in the region to adopt a slow-growth policy." And banned minorities from buying homes until 1965.

- **How addressed**: Thank you for your comment.

3B. "The City will continue to include projects in the City's Capital Improvement Program (CIP) that develop infrastructure which supports housing for lower-income residents, and provides transportation facilities for those without access to vehicles."

- **How addressed**: The ongoing evaluation of CIP needs and the action taken on May 23, 2022 does not negate the program in 3B to pursue transportation facilities for people without vehicles.

On May 23rd South Pasadena decided against implementing bike lanes in the city and instead used the money to expand a one lane road of Orange Grove to a two lane road at a cost of $500k in order to make it easier for people to get on the freeway. As part of the Housing Element South Pasadena should commit to implementing the adopted 2011 master bike plan by 2025.

Link to them rejecting the bike plan for the road widening:

https://twitter.com/ActiveSGV/status/1528818927588937728

Adopted but not implemented 2011 Bike Plan.

https://www.southpasadenaca.gov/home/showpublisheddocument/1793/636721709083330000

- **How addressed:** The particular project made reference to on May 23, 2022 has a long history associated with it and the Council used their independent judgment as to *that* location, not as to bike lanes in general as the comment would suggest.

  The bike plan is a more accurate reflections of the city's commitment to multimodal transportation, and is properly referenced in other elements of the General Plan, rather than the housing element. It is included in the draft GP due to be released soon.

3C. Regarding Program 2.e and the IHO increasing the supply of affordable housing. IHO makes every building economically infeasible so they will not be built and SoPas cannot claim it will help spread affordable housing through the city.

- **How addressed:** Program 2.e has been updated to address HCD comments.

Josh Albrektson (July 1, 2022)

5A. Site 18 cannot be developed without destroying the McDonalds drive through in site 17.

- **How addressed**: This site was removed from the inventory.

5B. Please ask to see the last contacts of the City with sites 3 and 6. What I have received from my PRAs implies both sites are not viable, with site 3 specifically telling the city that the IHO means his project can no longer work.

- **How addressed**: Owner is interested in the development of high-density residential housing and has submitted an application for a total of 8 market-rate units on the three parcels.

5C. Almost all sites are in locations where commercial projects can also be built and the probability of that happening is not taken into account at all. In the case of Vons and Pavilions, sites 20 and 21, that is actually happening with both undergoing extensive renovations in 2022. (Pavilions now and Vons planned)

- **How addressed:** Site 21 was removed from the sites inventory. Site 20 remains included due to the current renovations being minor in nature and would not preclude redevelopment of the sites. In addition, the only portion of Site 20 being counted is the parking lot and redevelopment of the parking lot would include ground floor parking with residential above. It was also stated by participants at the Developer Forum on August 15, 2022 that the City has sufficient parking and should reduce parking requirements where feasible.

5D. South Pasadena limited SB 9 so that all units can be a maximum size of 850 st ft. That guarantees a single family home is more likely to be built since they can build to 0.35 far. San Francisco did a feasibility study on SB 9 and determined that there was almost no sites in San Fran that a SB 9 project would be more feasible than a single family home, and that is without the 850 sq ft maximum SoPas does.

https://sfplanning.org/sites/default/files/documents/citywide/SB9_Summary_FinancialFeasibilityAnalysis.pdf

- **How addressed:** Program 3.m requires the City to develop guideless for SB 9 units by December 2022. There are no SB 9 units being counted towards meeting the City's RHNA.

6A. I think the numbers "consolidation on sites 10, 15, 19, 21 and 25" on the HCD letter is wrong. There is no site 25.

- **How addressed:** That is correct.

6B. Sites 10, 20, and 23 have the same owner. Sites 13 and 14 do not have the same owner. Site 14 the city met with an affordable housing developer and instead of developing decided to extend the lease of the playhouse located on the site.

- **How addressed:** In March 2022, the City Council modified its lease with the South Pasadena Theatre Workshop so that it would be a month to month lease to allow for the future development of the City-owned Site 14 without the constraint of a long-term lease.

7A. Paul told the city in May that the power lines are not a feasible site for anything. The Public works yard (site 9) should be removed from a list of viable sites. South Pasadena also counted the power lines sites for 15 moderate income sites on Table VI-44, line 6. This should also be removed.

- **How addressed:** Site 9 is owned by the City and the unit assumptions were updated to address HCD comments.

7B. See comments 1A and 1B above. There has been no new roads built in the Los Altos (SouthWest SoPas) since 1965 and the only lots that have been developed since that time had access to a road. All sites without road access, the planned pocket park, the guys backyard tennis court, the snake trail, and sites that don't exist should be removed.

Every site on page one of this spreadsheet:

https://docs.google.com/spreadsheets/d/1CZFzZM41DcAmVWgOUaFgaAU77Lrww9cSRwQ7GVJfWg/edit?usp=sharing

- **How addressed**: These sites inventory has been updated to reflect realistic capacity.

8A. They should only be allowed to claim the average ADU building permits for the last 36 months of whenever they get an approved housing Element. Other cities such as Los Angeles show there is a bump for two years due to pent up demand but then there is a drop in applications over time.

- **How addressed:** ADU assumptions have been updated to address HCD comments in Table VI-46.

8B. SoPas does not address the fact it is one of the richest cities in the Los Angeles II category of the scag survey and that it is unlikely that any ADU will be affordable to a low income family or individual unless it is given to family. Also they do not factor in that about half of all ADU applications will not be used for new housing but is instead an expansion of the current living space.

- **How addressed**: ADU affordability analysis has been updated on Page 231 with additional survey of ADU costs.

9A. They should never be allowed to have an "eight year objective" because that means it will never happen.

- **How addressed**: Thank you for your comment.

0A. Program 3.a is just a program that says sometime in the future they will study what kind of zoning is required to allow the density claims made in the Housing Element to be feasible. That kind of information should be done in the Housing Element itself.

- **How addressed**: Program 3.a requires the City to rezone to meet the City's RHNA requirement.

10B. The city forced 815 Mission to do a feasibility study for its density bonus. This feasibility study showed that the only way a 10% VLI housing project is feasible is if 57 feet is allowed, significant FAR increase, and almost every single open space and other requirement was waived. I would imagine a 10% VLI and 10% LI would require a much higher height and FAR limits than South Pasadenas base zoning has. You can find the feasibility study on page 104 and the concessions granted on page 120.

https://www.southpasadenaca.gov/home/showpublisheddocument/29308/637855358954070000

- **How addressed**: The City has included Program 3.n – Zoning Changes, the City will review and revise development standards or updates to processes and procedures to address constraints identified in this Housing Element and facilitate increased densities in the updated General Plan and the Downtown Specific Plan (DTSP) currently undergoing public review prior to adoption hearings. In addition, comparable Zoning Code revisions outside of the DTSP area will implement this program. The types of standards and processes that will need revising include height limits, open space standards, parking requirements including variances and findings for design review.

11B. No mention of the Pre-Application or the times to get through Building. Mission Bell started the permitting process in August 2017. It received planning commission approval in Feb 2020. It still does not have building permits, almost 5 years since the first contact with the South Pasadena planning department.

https://southpasadenan.com/mission-bell-project-approved-planning-commission-tweaks-conditionsauthorizes-venture/

- **How addressed:** The City is unaware of delays in this project attributable to the City, its staff, or its codified processes. The Mission Bell project has been moving through B&S, with many rounds of corrections to the developer-provided plans needed to get the plans to comply with building code. There is also delay related to their electrical connection (Edison), again as a result of developer design issues regarding compliance with state codes rather than the City code or staff related issues.

  Published comments from various news sources often do not have the full picture of what has transpired. The ability to address that record here is appreciated.

12A. I told the city as they were implementing the IHO that it was the highest in the state. I have repeated this statement about 15 times over the past year so the city cannot claim they did not know it. I provided them with examples of every local city IHO. I did math problems showing how it was non-viable.

They did a recent economic study this April that I sent in a different e-mail that showed that the IHO raised the prices by 11%. They implemented it with the purpose of shutting down development, as demonstrated by trying to backdate it illegally to apply to 815 Fremont. I sent in a report to HCD and Melinda Coy told South Pasadena this was illegal under SB 330 and they eliminated the backdating.

- **How addressed**: "Program 2.m – Update Inclusionary Housing Regulations.

Following results of the financial feasibility analysis of the existing Inclusionary Regulations, the City will update the Inclusionary Housing Ordinance to reduce the required percentage of inclusionary units from 20 to 15 percent. The City will also analyze the following parts of the regulations and will update them as needed to address constraints:

- 10 unit threshold
- In-lieu fees and cost of a comparable unit
- How the inclusionary regulations relate to state Density Bonus law"

12B. The economic report that they are doing is to show how feasible a density bonus project would be.

They are not examining if the IHO is feasible under the base zoning standards. On page 121 of the recent agenda packet the South Pasadena states "Building on the pro forma analysis completed in Task 2 and the understanding that the IHO will automatically trigger the State Density Bonus"

https://www.southpasadenaca.gov/home/showpublisheddocument/29512/637879719642900000

Automatically trigger the state density bonus means that South Pasadena knows it makes any project under the base zoning infeasible. They also applied it to buildings under 10 units which are much more likely to be infeasible with the added costs.

Since it was enacted in April of 2021, there has been only one project submitted. That was site 11 where the developer purchased the site not knowing the IHO was going to be implemented. And if the 19 Moderate and 89 above moderate numbers are true, it means South Pasadena is not applying the IHO to this project.

We are one year into the cycle and South Pasadena has intentionally killed all housing projects with this IHO.

Because of this South Pasadena should have to provide excess zoning and programs to catch up from them shutting down all projects.

- **How addressed**: The City will update the Inclusionary Housing Ordinance as described in Program 2.m above.

12C. There were contacts with developers when the IHO was being implemented. You will find comments from the developers of sites 8 and 3 on page 29 and 41, respectively, on the agenda packet when South Pasadena was considering the ordinance. You will see them stating that their projects are no longer viable. Victor Tang even did the feasibility analysis and showed that the IHO would cost the developer $933,000. For site 3 there has not been any contact with Victor Tang according to my PRA requests since this letter.

https://www.southpasadenaca.gov/home/showpublisheddocument?id=25699

- **How addressed:** The City held a forum with local developers on August 15, 2022 to discuss development constraints, including the City's Inclusionary Housing Ordinance. In attendance were numerous developers that have a history of working in South Pasadena or who are currently processing projects in the city, including Victor Tang. The Inclusionary Housing

Ordinance was not identified by the developers in attendance as a general constraint, but was identified as a constraint for projects less than five units.

Program 2.m, Update Inclusionary Housing Regulations requires that the City revise its Inclusionary Housing Ordinance to ensure that it is not a constraint for future development.

13B. See Comment 11B. There has not been a single recent project that has received building permits. Ask the city for the dates between planning commission approval and building permits for Mission Bell, the Senior center on Fremont, and Seven Patios. All of these projects have taken over 2 years to get building permits and as of recently none of them have building permits per year.

- **How addressed:** See above response.

18A. What the city describes as "Public outreach" is a combination of trying to talk to people who could give them more cover to claim that non-viable sites are actually viable. There were no meetings from November 17th until after this draft of the housing element was submitted. There was no effort to reach any residents, let alone renters or low income residents.

- **How addressed:** The commentor's position and opinion is noted. There is a record of the outreach efforts that were made over the past two years. As noted in Appendix B, prior to the release of the previous public review draft of the Housing Element, the City held public workshops on:
  - May 30, 2020;
  - June 2, 2020;
  - September 23, 2020; and
  - October 21, 2021.

  In addition, the City held the public hearings on:
  - July 21, 2020 at Planning Commission;
  - August 5, 2020 at City Council;
  - August 11, 2020 at Planning Commission;
  - September 8, 2020 at Planning Commission;
  - December 15, 2020 at Planning Commission;
  - January 26, 2021 at Planning Commission;
  - May 25, 2021 at Planning Commission;
  - October 12, 2021 at Planning Commission;
  - November 9, 2021 at Planning Commission; and
  - November 17, 2021 at City Council.

  During this time period, the City was operating under and emergency declaration due to the COVID-19 pandemic, which prevented most of the meetings from being held in person and required them to occur online.

19A. Appendix B explains why the city doesn't think the comments are valid or applicable. It does not integrate any of the comments into the Housing Element.

- **How addressed:** Appendix B has been updated to include public comments received on the draft Housing Element and responses to comments in the draft Housing Element.

Matthew Gelfand (July 5, 2022)

Dear Mr. McDougall:

Californians for Homeownership is a 501(c)(3) organization devoted to using legal tools to address California's housing crisis. Our organization is monitoring local compliance with Housing Element law. We are writing to comment on the revised draft Housing Element submitted to HCD by the City of South Pasadena on May 11, 2022, as modified by the City's June 29, 2022 responses to HCD's anticipated comments.

At the outset, we note that other commenters have extensively detailed the inadequacies in the City's sites inventory, both in the context of the City's first draft housing element and the revised draft that HCD is reviewing now. Our comments are intended to highlight some of the most egregious problems with the inventory. We encourage you to review the comments made by others, including the extensive documentation provided on Twitter by Josh Albrektson. [https://twitter.com/JalbyMD/status/1538985994602459136?cxt=HHwWgMClqfbmydsqAAAA]

We also note that although the City provided some information about planned changes to its housing element in its June 29, 2022 responses to HCD's anticipated comments, the City did not provide specific information about which sites it intended to remove from its sites inventory.

Our comments here are based on the limited information provided by the City.

Non-Vacant Sites

The sites inventory in the City's draft Housing Element does not meet the requirements in Government Code Section 65583.2(g). The inventory does not adequately account for the impediment created by the existing uses on the listed nonvacant sites, including the possibility that a site will be maintained in its current use rather than redeveloped during the planning period.

What's more, the City's draft housing element appears to rely on nonvacant sites to satisfy over 50% of the City's lower income RHNA. But the inventory does not identify evidence that the existing uses on each of these sites will be discontinued during the planning period. For example:

 HCD's prior letter pointed to three specific examples of sites with existing uses to be further evaluated or removed. For two of the sites (the Pavilions site and YMCA site), the revised draft Housing Element adds only vague statements about owner interest and does not adequately address the impediment of existing use. No additional information is provided for the other singled-out site (the Vons site), which is purportedly able to accommodate the largest number of units of any site with 157 lower-income and 263 total units. The City should be required to remove these sites from its inventory.

 More generally, the inventory lists three of the five area grocery stores. Each existing grocery store is a vital existing use that is exceedingly unlikely to be discontinued within the planning period. But it is even more unlikely that more than one of these stores will be closed, as the remaining stores will be forced to shoulder the burden of additional demand once one store closes. Although in one case the City is treating the store's parking lot as the area for development, the parcel includes the store itself and state law requires the City to show that the existing use (the store) will be discontinued in order to avoid the presumption that it will impede development; this makes good sense, as there is no way to

develop on the parking lot parcel without discontinuing use of the store for at least several years in the absence of parking. The City should be permitted to list no more than one existing major grocery store on its inventory.

 The inventory includes a number of other sites containing existing uses for which the City acknowledges there is no evidence of developer or owner interest in redevelopment, and the City should be required to remove all of these sites from the inventory:

- **How addressed**: Vons and Ralph's grocery stores were removed from the inventory. Pavillions remains on the inventory and only the parking lot is being included in the inventory and any future development would include ground floor parking and residential above.

APN 5318-015-017 (900 Fair Oaks Ave.), purportedly able to accommodate 18 lower-income and 29 total units: This parking lot is leased to the Rite-Aid corporation through December 2035.2 [https://www.loopnet.com/Listing/900-Fair-Oaks-Ave-South-Pasadena-CA/14380777/] The draft Housing Element states that there is no interest from developers or the property owner. The fact that the property is not subject to a covenant with the adjoining property does not help the fact that it is encumbered by a lease until 2035 and cannot be developed within the planning period. The housing element notes that the site has been listed for sale, but conspicuously fails to reveal that it was listed as a parking lot to be used for income property through 2035, not as a development property.

- **How addressed:** The Rite Aid site was removed from the inventory.

APN 5311-012-019 (301 Monterey Rd.), purportedly able to accommodate 19 lower-income and 31 total units: Commercial building with an existing use as a liquor store. The draft Housing Element states that there is no interest from developers or the property owner.

- **How addressed**: Owner is interested in the development of high-density residential housing and has submitted an application for a total of 8 market-rate units on the three parcels. The sites inventory has been updated to reflect this information.

APNs 5318-004-012, 5318-004-019, and 5318-004-023 (716 Fair Oaks Ave.), purportedly able to accommodate 17 lower-income and 29 total units: Commercial property with an existing use as a relatively new McDonald's restaurant. The draft housing element states that there is no interest from developers or the property owner.

- **How addressed**: This site was removed from the inventory.

APN 5311-004-010 (143-161 Pasadena Ave.), purportedly able to accommodate 50 lower-income and 83 total units: Commercial property with new tenants. Although the draft housing element suggests prior interest in development, it indicates that the current status (presumably since the new tenants) is unknown.

- **How addressed**: The City made contact with the property owner and they support rezoning for future multi-family development.

Undevelopable Vacant Sites

The sites inventory lists as sites for housing a large number of vacant parcels on mountainous terrain, not served by paved roads and with no access to utilities. Most of these sites have zero likelihood of

being developed and they are either publicly owned with no plans for sale or privately owned and considered undevelopable by the owners. In some cases, themaps included with the City's housing element include references to roads that do not actually exist, such as "Harriman Avenue." "Harriman Avenue," as depicted in housing element (left) and the entrance to "Harriman Avenue" from the ground (right). In addition to having little or no likelihood of development, the City has not met the requirements of Government Code Section 65583.2(b)(5)(B) for these parcels.

Because these parcels are generally not served by a paved road, they should be addressed by requiring the City to remove all vacant parcels not served by an existing paved public roadway.

- **How addressed**: Sites previously listed on Harriman Ave have been removed from the inventory.

Density Assumptions

The highest-density project identified in the City's table of representative projects is a 50 unit/acre project that used 98% of the available FAR. Nevertheless, the City has used for some parcels an unrealistic assumption of 70 units/acre—a density that stands no chance of being achieved due to the City's voter-mandated 45-foot height limit and its restrictive development standards for FAR, setbacks, open space, parking, etc.

To justify this assumption, the City has cited two projects from other cities with very different development standards. The first project, in Hercules, is above the South Pasadena's height limit, so South Pasadena appears to have taken the absurd approach of simply omitting the unit count for the project's top floor in calculating the project's density without accounting for the feasibility and economies-of-scale differences between developing a four- versus three-story project. The second project is a smaller project in the City of Santa Monica. Both projects appear to be built up to the property line (indeed, the Hercules project appears to extend over the sidewalk) and have no visible parking. Nothing resembling these projects could be built in the City of South Pasadena.

The City should not be permitted to use a density assumption above 50 units/acre for any site on its inventory. In the alternative, the City could commit (in its rezoning program) to abandon its height limit or its FAR, setback, open space, and parking requirements on the 70-unit/acre parcels.

Thank you for considering these comments as you review the City's draft housing element.

Sincerely,

Matthew Gelfand

- **How addressed**: The City has included Program 2.n Citywide Height Limit Ballot Imitative to facilitate destines above 50 dwelling units/acre on sites in the Housing Element.

Ross Silverman (July 18, 2022)

To all involved;

I believe it is imperative that the upzoning include all CG, M, and even R zones adjacent to commercial corridors in South Pasadena.

Thank you

Ross Silverman
1008 Mound Ave.
South Pasadena, CA 91030

How addressed: The analysis done as part of the housing element update process indicates that upzoning all CG, M and R zones adjacent to commercial corridors in South Pasadena is not necessary to meeting the City's RHNA. However, upzoning is necessary in certain areas of the city, as shown in Program 3.a - Rezone and Redesignate Sites to Meet RHNA, The City will redesignating and rezoning the parcels listed in Table VI-50 and in the sites exhibits in Appendix A to address the shortfall of suitably-zoned sites to address the lower-income Regional Housing Needs Allocation (RHNA) once their General Plan land use and zoning is amended.

Josh Albrektson (Jul 18, 2022)

17 months ago South Pasadena enacted the highest IHO in the state. It was done to make sure that no housing could be built in South Pasadena and it succeeded. It killed every project except one. That is the schoolyard project where they purchased the land not knowing the IHO was about to be enacted.

In case the recent Housing Element letter wasn't clear, HCD actually wants housing to be built and doesn't care for bullshit fake "owner interest" and "Legal R1 lots" that housing will never get built. Here is one line:

"analysis on how given land use constraints such as height limits and the inclusionary zoning requirements may make development infeasible on sites"

After listening to the City Council meeting again I am certain that staff and Placeworks still don't know what the Housing Element law is in relation to the IHO. Amy Senheimer quoted the wrong law in the meeting and staff kept claiming this study proved the IHO to be feasible.

As I have said many times in public comment, you cannot use a density bonus to make anything possible for the Housing Element. It is at the bottom of page 14 of the June 10th 2020 HCD memo on Housing Elements.

" The analysis of "appropriate zoning" should not include residential buildout projections resulting from the implementation of a jurisdiction's inclusionary program or potential increase in density due to a density bonus, because these tools are not a substitute for addressing whether the underlining (base) zoning densities are appropriate to accommodate the RHNA for lower income households. Additionally, inclusionary housing ordinances applied to rental housing must include options for the developer to meet the inclusionary requirements other than exclusively requiring building affordable units on site. While an inclusionary requirement may be a development criterion, it is not a substitute for zoning. The availability of density bonuses is also not a substitute for an analysis, since they are not a development requirement, but are development options over the existing density, and generally require waivers or concessions in development standards to achieve densities and financial feasibility."

Not only that, the city has to show that the IHO is not only barely feasible, but you have to show that it is LIKELY that the buildings will still happen with the IHO AT THE BASE DENSITY.

As I am writing this on Thursday I believe that SoPas will propose a 15% Low Income IHO. A 15% Low income IHO was not analyzed by EPS, but EPS did produce some great data that can be used to analyze IHOs in South Pasadena.

And this data shows that a 15% low income IHO is not feasible in South Pasadena with the current conditions at the base density (or even with significant upzoning). This would be very easy for me to prove to HCD using the data provided. It would also be obvious to anybody who has experience developing buildings or providing loans for buildings. It takes about $5 per sq ft rent to be feasible.

I want an IHO that actually means the buildings actually get built. For 17 months you had one that made sure that no buildings could get built despite my objections and proof it was the highest IHO in the state.

So if you want my support on this IHO this is what I propose:

1. 5% Very Low OR 10% Low OR 25% Moderate IHO

2. Buildings under 10 units fully exempted

3. In Lieu fee for fractions as described in the April Report. Builders can fully pay the In Lieu fee to opt out. (This is required by law)

4. If South Pasadena produces less than 200 units a year starting with the 2024 APR, then the IHO is eliminated.

Or you can enact a 15% Low Income IHO and wait for it to be rejected when I show HCD that it is not feasible using the data in today's report.

There is no developer or bank that would consider a 15% IHO feasible based on the data provided. I will also point out HCD told the City to reach out to developers in part so that the developers would tell them that the 15% is non-viable.

"Other Local Ordinances: While the element now describes the inclusionary housing requirement and local height initiative, it generally does not analyze the impacts on housing cost, supply and ability to achieve maximum densities, including densities proposed as part of this housing element. For example, the analysis of the inclusionary requirement should, among other items, address the 20 percent requirement and cost impacts, 10 unit threshold, in lieu fees and cost of a comparable unit and how the inclusionary relates to State Density Bonus Law. The City should engage the development community as part of this analysis. Please see HCD's prior review for additional information."

- **How addressed**: "The City has included Program 2.m – Update Inclusionary Housing Regulations.

  Following results of the financial feasibility analysis of the existing Inclusionary Regulations, the City will update the Inclusionary Housing Ordinance to reduce the required percentage of inclusionary units from 20 to 15 percent. The City will also analyze the following parts of the regulations and will update them as needed to address constraints:

  - 10 unit threshold

- In-lieu fees and cost of a comparable unit
- How the inclusionary regulations relate to state Density Bonus law"

Josh Albrektson (July 22, 2022)

The agenda packet has been published and I have read through it. Your staff still doesn't know the law/requirements of an inclusionary housing ordinance as it relates to the Housing Element, no matter how many times I have posted the paragraph at the bottom of page 14 of the June 10th, 2020 HCD memo.

All proposals guarantees a rejection of the Housing Element, so this entire meeting will be a waste of time.

- **How addressed**: "The City has included Program 2.m – Update Inclusionary Housing Regulations.

  Following results of the financial feasibility analysis of the existing Inclusionary Regulations, the City will update the Inclusionary Housing Ordinance to reduce the required percentage of inclusionary units from 20 to 15 percent. The City will also analyze the following parts of the regulations and will update them as needed to address constraints:

  - 10 unit threshold
  - In-lieu fees and cost of a comparable unit
  - How the inclusionary regulations relate to state Density Bonus law"

Alan Ehrlich (August 11, 2022)

Hi Angelica,

A "draft' ordinance originating from CHC was brought to my attention yesterday but I haven't been able to determine if it was in fact enacted. While the draft does not appear to outright ban demolition of older buildings, if it does exist, it might be seen as a constraint on developement.

To the extent Josh A (or HCD) has not mentioned anything about this, either he (they) is (are) not aware of it or, as it appears, is a lesser issue of concern. Could you please confirm is this draft, or something similar, was actually adopted and on the city's books.

thank you,

Alan

International Federation of Professional & Technical Engineers, Local 21 v. Superior Court

California Supreme Court, 42 Cal.4th 319 (2007)

Appendix B

See #3 on Page 20. This is from 2017.

ORDINANCE NO (southpasadenaca.gov)

If this process is removed to allow for the development of affordable multi unit housing we could get more sites. There is nothing culturally or historically significant about most the buildings on Huntington or even those fourplexes on Brent and Park.

- **How addressed**: Thank you for your comment, the City will continue to explore all options to provide more housing in the City of South Pasadena.

Josh Albrektson (September 1, 2022)

These are the programs I would like to see South Pasadena adopt.

In the June 29th letter to HCD the City made a commitment to increase the transportation options to lower income residents without cars (Page 10). I know this was probably a bullshit throwaway line so that you could pretend to be doing something without actually planning to do anything. Here are the bike programs that need to be firm commitments with deadlines and not just some bullshit "We will look into it sometime in 7 years." Of note, just last month 3 people were killed by a car on Marengo St, something that possibly would have been prevented if these changes were implemented.

- **How addressed**: The Housing Element has been revised to include documentation of transportation network improvement, including Fremont/Huntington Mobility Active Transportation Project, North-South Corridor (Fair Oaks) Intelligent Transportation System Deployment, Rectangular Rapid Flashing Beacons at three locations in the City's lower-income residential area, and the Mission Street Slow Street Pilot Program. Additional transportation network updates will be addressed in the forthcoming revision to the City's General Plan and the Downtown Specific Plan.

1. The Mission Street Slow Street program is made permanent. (Bottom of page 9 of 6/29 letter). Bike lanes and no more than one lane of car traffic in each direction would be implemented and remain implemented. Right now there are bike lanes on Mission Street East of Fair Oaks and Bike lanes on Marengo. This would allow the entire eastern half of the city to have a safe route to bike to the train station. This should be done by the end of 2023.

- **How addressed**: The City's Slow Streets Program is intended to provide space for residents to safely walk and ride, and to support local businesses' use of outdoor space for dining or other purposes. The next step in this program is the installation of temporary program equipment purchased with grant funding for short-term installation, such as temporary striping, curb extensions using reflective delineators, and bicycle lanes using short-term paint/tape and signs. Other placemaking elements are also incorporated like furniture, plants, art pieces, and parklet structures outside of businesses, to create usable street space. The temporary installation is planned for Spring 2023 and is expected to be in place for 6-months, after which an assessment of the design's observable performance, and an evaluation of the community's experience, will be conducted – this should inform the future consideration of potential permanent changes to Mission Street.

2. The Bike lanes and one vehicle lane is extended west of the train station to Pasadena Street where there are bike lanes that extend to the Los Angeles border. This would allow the west part of the city to safely travel to the train station. This should be done by the end of 2023.

- **How addressed**: Bicycle lanes along Mission Street and Pasadena Avenue are included in the City's adopted Bicycle Master Plan. Temporary bicycle lanes are expected to be implemented along Mission Street in 2023 within the Slow Streets Program, and the incorporation of bicycle lanes at the intersection of Pasadena Avenue and Mission Street are being evaluated in the current street resurfacing project, which is in the mid-design phase.

3. Monterey Road in Los Angeles has bike lanes. These lanes end at the South Pasadena border. The bike lanes should be extended to the junction of Monterey Road and Pasadena Ave. This should be done by the end of 2024.

- **How addressed**: A Class 2 bicycle lane is proposed for this location in the City's adopted Bicycle Master Plan.

4. South Pasadena schools are known as one of the best schools and there is no safe route for kids to bike to the 2 elementary schools on flat land. As mentioned about just last month 3 people were killed on Marengo Street.

- **How addressed**: City Council has directed staff to focus the next round of Metro Measure M Multi-Year Sub-Regional Program funding requests on bicycle facilities and pedestrian crossing improvements. Staff plan to focus this funding request evaluation on neighborhoods containing schools.

4A. Class one Bike lanes should be done on Marengo Ave from Garfield Park to the City of Alhambra. These would be two way bike lanes on the east side of the street where Morango elementary school is. Going from west to east, it would be Parking south, Traffic lane South, Traffic lane north, Parking north, Bollards, Bike lane south, Bike lane North. This should be done by the end of 2024.

- **How addressed**: A Class 1 bicycle lane is not proposed to replace the existing Class 2 bicycle lane along Marengo Avenue in the City's adopted Bicycle Master Plan, however, a Class 1 bicycle path is proposed parallel and adjacent to Marengo along the Southern California Easement from Garfield Park to the City of Alhambra.

4B. Class one Bike lanes should be done on the South Side of El Centro extending from Orange Grove to Pasadena Ave where Arroyo Vista Elementary school is. Going from North to South it would be Bike lane going east, Bike lane going west, bollards, Parking going east, traffic going east, traffic going west, parking going west. This should be done by the end of 2024.

- **How addressed**: A Class 2 bicycle lane is proposed for this location in the City's adopted Bicycle Master Plan.

  4C. The El Centro bike lanes should be extended from Orange Grove east to the train station. The South Parking lanes would be removed. Of note EVERY home on the south side of El Centro in this stretch has a garage and driveways that could fit at least 4 cars. From south to north it would be Bike lane going east, Bike lane going west, bollards, traffic going east, traffic going west, parking going west. This should be done by the end of 2025. Timeline: For the

last 4 multifamily projects South Pasadena has not had a single project get building permits, even though the earliest project was initiated in 2018. Extensive changes need to be made in the manner that South Pasadena processes housing. These are just some of the changes that should be implemented.

- **How addressed**: A Class 3 bicycle lane is proposed for this location in the City's adopted Bicycle Master Plan.

5. A total of 5 planner equivalents are required to be employed at all times. This could be 4 full time employees with 2 part time. This should be implemented immediately.

- **How addressed**: The City currently has 1 planning manager, 3 associate planners, 1 assistant planner and 1 planning counter technician FTE positions funded this fiscal year. The assistant planner began employment on Sept. 6 and the city is currently recruiting for the Planning Counter Technician position. In the meantime, a part-time planning management intern assisting until the Counter Technician position is filled.

6. The pay for entry level planners, both currently hired and for all job postings, should be the average of Pasadena and Los Angeles plus 2% and benefits. This should occur immediately. For the last 7 years there has been EXTENSIVE turnover with the average person lasting 1 year in South Pasadena. There is currently only 1 part time planner who was employed by South Pasadena who was present a year ago.

- **How addressed**: The city recently completed a compensation study and in the coming months will begin a classification study. The compensation study used comparable cities to South Pasadena in terms of overall organizational structure, size, and budget.

7. The Community Development Director has her Salary immediately changed to the Average salary of the directors of the Pasadena, San Marino, Alhambra, and San Gabriel.

- **How addressed**: The city recently completed a compensation study and in the coming months will begin a classification study. The compensation study used comparable cities to South Pasadena in terms of overall organizational structure, size, and budget.

8. The pre-application is eliminated, effective immediately.

- **How addressed**: The pre-application is intended to be a tool for developers and it is optional. The Pre-Application process helps streamline the overall entitlement process by helping the applicant and staff identify and resolve critical issues very early in the process.

9. The program where a project has to pay for a planner that does the work of the city is immediately ended. South Pasadena can pay for this consultant if it chooses to.

- **How addressed**: The City remains committed to allowing project planners to be hired by applicants willing to expedite their projects. Such process does not affect the remining projects in the queue as no staff members are used to review such projects to the detriment of non-expedited projects.

To ensure that no delay occurs due to this project opportunity, the City will facilitate special meetings of the planning commission and city council (as applicable) to ensure sufficient time for projects to be considered without delay.

10. All multifamily housing projects 10 units or greater are automatically moved to the front of the line and heard immediately.

- **How addressed**: City is unaware of the ability and feasibility to create such automatic advancement of projects through the planning process. City will adopt a process of placing such housing projects at the beginning of each meeting on which such item is considered to ensure that the widest exposure to public comment is gathered and that the project is not unduly delayed.

11. All multifamily projects between 2 and 9 units are moved to the front of the line after 2 months.

- **How addressed**: City is unaware of the ability and feasibility to create such automatic advancement of projects through the planning process. City will adopt a process of placing such housing projects at the beginning of each meeting on which such item is considered to ensure that the widest exposure to public comment is gathered and that the project is not unduly delayed.

12. Removal of CUP for all projects under 50 units.

- **How addressed**: The requirement for a CUP has not been identified previously as a constraint on development and has not been included as one of the specific policies in the Housing Element. However, this comment will be considered when developing the Downtown Specific Plan's requirements for residential development.

13. All multifamily projects that are under 50 units and in the downtown specific plan, Ostrich Farm, or an identified Moderate or Low income site are not required to perform a Transportation study, Noise Analysis, or Climate Change and Energy analysis. These would be deemed acceptable and would automatically qualify for a class 32 exemption. If required, South Pasadena could perform a citywide analysis of Traffic, Noise, and Climate Change for all sites as described above at 30% over the claimed units in the Housing Element.

- **How addressed**: Developments in these areas of the city will need to comply with CEQA, including analysis for transportation, noise, climate, and utility impacts. Developments will be considered for categorical exemptions if they are eligible.

14. All housing applications are posted online once a week and updated when their status weekly so that it could be determined when the application was deemed complete, when the CEQA analysis was done, and that every part of the Permit Streamlining, SB 330, and AB 2234 act are being followed.

- **How addressed**: Such requirement is a undue burden on the City and staff, and would cause delays in other aspects of duties by the planning division, while providing only marginal benefit towards the production of additional housing opportunities. City will continue to monitor ways other agencies are updating such information and evaluate if new technologies can be employed to address this issue.

15. It is required that the first planning commission, Design Review, or Cultural Historical committee happen within 6 months of the application being deemed complete for all multfiamily housing projects.

- **How addressed**: The City is required to follow the requirements of the Permit Streamlining Act with respect to public hearing dates once a complete application has been filed.

16. All commission hearings are completed within 90 calendars of the first commission hearing for all multifamily housing projects. If not done within 90 days, the application is deemed complete. This includes all chair reviews.

There are extensive charges and requirements for all multifamily housing that make it infeasible. Of note, South Pasadena produced a feasibility study that showed that nothing is viable.

The following changes should be made immediately to make multifamily housing viable in South Pasadena.

- **How addressed**: The City is required to follow the requirements of the Permit Streamlining Act with respect to public hearing dates once a complete application has been filed.

17. The FAR requirements as stated in SB 478 are implemented immediately.

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a.

18. Multiple Story exception of a 45 degree from the front to posterior is eliminated. (Page 114 of 2nd Housing Element)

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan. This will be considered as part of that amendment.

19. Private open space required for all projects changed to 75 sq ft per unit

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan.

20. Common Open Space required cut in half for all projects.

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan.

21. Removal of all requirements for how the private open space is accessed from the apartment.

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan.

22. Removal of all dimension requirements for the common open space.

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan.

23. Elimination of all open space requirements of elevation

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan.

24. Removal of all uncovered area requirements

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan.

25. Open Space, either common or private, can be on the roof of the building.

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan.

26. Removal of all parking requirements within half a mile of a transit stop for multifamily projects.

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan.

27. Removal of all commercial parking requirements within the downtown specific zone.

- **How addressed**: New development standards will be included as part of the Downtown Specific Plan.

28. The city cannot require a development to provide public parking. (There are multiple previous housing projects where this was required and the parking lots are empty. The Mission Meridian parking garage across the street from the train station is at 41% capacity on a weekday and 18% on a weekend. It is the lowest % of any parking lot on the Metro Gold Line.

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan.

29. Single family parking requirements lowered to one spot.

- **How addressed**: The City's zoning ordinance will be amended as part of Program 3.a. New development standards will be included as part of the Downtown Specific Plan. This will be considered as part of this amendment.

30. Signage made by the city for all public parking lots. This should be done by 2025.

- **How addressed**: This comment does not relate to the Housing Element. It will be addressed in other parts of the General Plan.

31. Immediate removal of the Inclusionary Housing Ordinance. The city knows the current IHO makes every project infeasible and both the planning commission and City Council directed the staff to change the IHO. The Staff decided to make it as a program for removal meaning that extensive time will pass with no housing being financially viable.

- **How addressed**: Changes to the Inclusionary Housing Ordinance will be made as part of Program 2.m.

32. The city is proposing that there be a ballot initiative in 2024 to remove some of the height limit. This is COMPLETELY unacceptable. The height limit was identified as a significant constraint in the 12/21/21 HCD letter and the staff chose to not do anything about it. This should be required to be done in March 2023 and the Housing Element should not be deemed compliant until the height limit is officially repealed.

- **How addressed**: The height limit will be considered consistent with the court order and Program 2.n.

33. Removal of the following fees for multifamily housing: Tentative Parcel Map, Tentative Tract Map, Lot line adjustment, CHC Appropriateness, Environmental impact report, Zoning text and map amendments, Specific plan application, Specific plan amendment, Development agreement review, Planned development, Technology Surcharge, General Maintenance fee.

- **How addressed**: At this time the City is unable to commit to such project. The City will create a program to annually reevaluate alternative funding sources for such project requirements for multifamily housing projects.

34. Removal of the Public Art Fee

- **How addressed**: At this time the City is unable to commit to such project. The City will create a program to annually reevaluate for multifamily housing projects.

35. Water connection and Sewer connection should be at cost.

- **How addressed**: At this time the City is unable to commit to such project. The City will create a program to annually reevaluate for multifamily housing projects.

36. Removal of all fees for ADUs.

- **How addressed**: At this time the City is unable to commit to such project. The City will create a program to annually reevaluate.

Yvonne LaRose (September 9, 2022)

The Housing Element considerations that are to be finalized by September 15, have a number of issues that are of concern and need to be addressed. Affordability is one of those issues. Some of the very indirect impacts of that issue are addressed in some research I did in April of this year. The research was related to the bills signed by Gov. Newsom regarding restrictive covenants, to wit:

> Governor Newsom Signs Bill Requiring Redaction of Unlawful Restrictive Covenants - California Land Title Association

A quote from the below article subtly reminds one of South Pasadena's Sundown standards and how the residual effects of that era still exist in many tenuous ways and are accepted as the community standard.

> **"We need to provide wealth, building opportunities for those individuals and those families who were left out," Flores said. "We need to provide those wealth building opportunities in communities where the land has a higher value, not because it's fair, but because of laws in the past that made it so and continue to make it so."**

We are challenged with creating more housing for a projected drastic increase in population that does not parallel our neighboring cities of similar size and constituency. The issue of how to create that housing goal with a limited amount of space is definitely a challenge, yet using San Gabriel as an example, the challenge appears to be reachable. The next question is how the vision can be attained while also making inclusion and equity part of the actualization.

The conclusion of the article provides food for thought as we strive to create a strategic housing plan that makes our city legitimately and in reality one of inclusiveness.

> **Because whether people choose to remove racially restrictive covenants, like Beatty and Zak, or keep them as evidence, like Dew, the goal seems to be the same — to remember the past in order to build a more equitable future.**

Let us not use zoning laws to substitute for enactment of a thinly veiled practice of indirectly defaulting to what should be part of our dark history in the form of restrictive covenants couched under some new terminology.

- **How addressed:** The Housing Element has been updated to more fully address the City's history of using land use controls as a way to make South Pasadena an exclusive community. The goals and programs throughout the Housing Element are intended to open South Pasadena up and expand the housing opportunities throughout the City.

Victor Tang (September 10, 2022)

Hi,

This is Victor Tang, developer for site 3. We have already submitted plans to build 8 market rate units on three parcels. Per 6th Housing Elements, my site will be zoned Affordable Housing Overlay Zone. There is conflicting information regarding the rezoning date:

1. On page 14 under "Program 2.k", it says "Amend zoning to include overlay by Oct 15, 2024."

2. On page 17, under "Program 3.a", it says "The rezoning of the vacant parcels must be completed within one year of the beginning of the 6th Cycle Housing Element planning period, which is October 15, 2022. Sites that are planned to receive the Affordable Housing Overlays in the General Plan and Zoning Code are also addressed by this program."

If the rezoning date is Oct. 15, 2022, does it mean I can submit another plan with 50+ units right after Oct. 15, 2022? Do you have the zoning code and development standard of the Affordable Housing Overlay Zone for me to do a feasibility study? If it is the Oct 15, 2024 date, we have no interests in waiting.

- **How addressed:** These two dates are for different programs. Site 3 is not a vacant site, and is therefore addressed as part of Program 2.k. The Housing Element currently anticipates the construction of 8 above moderate income units on the site, which is consistent with the application the developer has submitted to the City for this site.

For Table VI-41 on page 144, Tree Removal Application is missing. If a lot for development has native trees, there will be a public hearing by Natural Resources and Environmental Commission. It uses subjective standard and will stall the development for several months. For my past projects, the planning commission asked my architect to redesign so that one oak tree could be preserved. We had to spend a few months to have an alternative design to prove to the planning commission that alternative design to preserve the tree was not feasible.

I hope city attorney can review the Permit Processing carefully from page 141 to page 144 to make sure that the city has satisfied the requirements of SB330 (Housing Crisis Act of 2019). Summary of SB330 can be found here:
https://www.smwlaw.com/2022/01/13/applying-sb-330-in-real-life/ Here are some keys points of interests:

1. Permit Streamlining Act provision requiring completeness determination within 30 days

2. Local agencies must notify an applicant of any inconsistencies with objective standards within 30 days of the full application being determined to be complete if the project has 150 or fewer units, or within 60 days, if the project has more than 150 units. The local agency must include all inconsistencies in this notification; any inconsistency that is not noted in a timely way cannot be used as the basis for denying a project.

3. A single residence can count as a "housing development project."

4. Only projects with two or more residences are "housing development projects" for purposes of Government Code section 65589.5, which prohibits cities and counties from denying or making infeasible "housing development projects" that comply with objective development standards, unless specific findings are made

Based on item 4 above, the city needs to stop using discretionary review on multifamily development immediately instead of waiting for "the updates to the General Plan and zoning are complete and the Downtown Specific Plan is adopted' (page 141). City can offer developers incentives to subject their projects to discretionary review voluntarily.

30-day deadline for item 1 and 30/60-day deadline for item 2 are critical. For example, a developer can submit a project with 60-ft height. If the city doesn't notify the developer that 60-ft is not allowed by the zoning code before the deadline, city can't deny the project height later.

I talked to other developers and architects. Many are frustrated with the long entitlement process time. I was told there were 60-80 projects in the pipeline and I am not sure how many are qualified "housing development project". As the planning department is short on staff and it may not be aware of the significance of the deadlines in item 1 and 2 above, deadline for notifications may have been missed for many projects. Therefore the city has very limited basis to deny these projects. The city needs to give these projects entitlement quickly to clear the backlog and avoid possible lawsuits.

As the planning department is short on staff, many developers are willing to pay external planners to expediate the review process.

- **How addressed:** Program 3.b requires that the City adopt objective development standards for mixed-use and adaptive re-use projects within 120 days of the adoption of the Housing Element. Additionally, Program 3.e requires that the City develop an electronic permitting system to help streamline the approval process and address many of the issues raised by this comment.

I have another project in Alto de Monterey Overlay District. The zoning code requests 15ft first floor setback and 35ft second floor setback. Even second floor ADU requests 35ft setback. I hope the city can update zoning code and ADU Ordinance in this district to make development feasible.

Best,
Victor Tang

- **How addressed:** Program 3.f requires that the City to review its ADU ordinance within six months of receipt of comments from HCD regarding the ordinance.

Josh Albrektson (September 10, 2022)

You guys performed a feasibility study that showed that all buildings are not feasible under your current IHO.

This feasibility study did not include carrying costs or the costs to tear down the structure that is on the property.

This feasibility study also used prototypes that are not allowed to be built in South Pasadena.

This feasibility study used a return on cost of 5% and without the carrying and demolition costs claimed that ther prototypes that cannot be legally built in South Pasadena are feasible at 5.2% Yield on cost.

West Hollywood uses a 12% yield on cost for viability. San Francisco says 15-24% is marginal and 25% is feasible.

Using your numbers, a fully market rate project with no inclusionary units would have a 6.8% Yield on cost, again using a prototype that cannot be built in South Pasadena and without carrying or demolition costs.

How exactly can you guys say any inclusionary housing ordinance doesn't affect feasibility when 100% market rate projects (Like Mission Bell) do not pencil out today?

--
Josh Albrektson MD
Neuroradiologist by night
Crime fighter by day

- **How addressed:** Program 2.m requires that the City update its Inclusionary Housing Ordinance within six months of adoption of the Housing Element. Program 2.i requires that

the City monitor the effectiveness of the Inclusionary Housing Ordinance and to make changes by the end of 2023, then annually thereafter as revisions are needed.

John C. (September 11, 2022)

I believe we can raise height the limit in a way were more than 50 percent of the residents voters would have no problem with it. The way to do that is making a bipartisan deal with the residents of South Pasadena. I will use an example. Example, South Pasadena City height limit is 45 feet what if we say we raise the height limit by 5 feet. Will the residents of South Pasadena make a big deal out of this? In my opinion, no, I do not next South Pasadena resident would have issue. Also, if you put that on the ballot in election it would pass easily because the majority of residents thinking logically will not being making a big fuss over it. I know there will be the minority of the few resident will definitely make an issue out of raising the height limit by 5 feet, but remember not everyone is going to agree with this and also those resident are the minority. But, if you go the other way by saying you want to raise to 110 feet than the majority of residents will say no. I read in the 3rd housing element draft from a previous person comment that the height limit will have be raised by 12 feet. I believe most resident will have no problem with that or even if you ask to raise by 15 feet they still will have no problem. For this to happen the residents need to know how high the city need to raise the height limit and that question has not been answer.

From, John
Sent from Mail for Windows

- **How addressed:** Program 2.n and the court order require that the City place a measure on the ballot by December 31, 2024 to remove or amend the height limit to allow for the densities necessary to meet the City's RHNA requirements under this Housing Element. As part of this ballot measure, the City will work with developers and community members to determine an appropriate height limit and to build support for the ballot measure.

Elizabeth Anne Bagasao, South Pasadena Tenants Union (September 14, 2022)

To Whom It May Concern:

South Pasadena Tenants is attaching our comments on the Third Draft Housing Element that was released for public review on September 8, 2022. It is our understanding that the deadline for the city to submit the third draft to HCD is September 15 however after review of the draft we feel strongly comment is warranted.

We thank you for your consideration of our comments and would welcome any discussion of our response to the Third Draft Housing Element.

Best regards,

Anne Bagasao on behalf of SPTU

SPTU Third Draft Housing Element Comments:

In the July 8 HCD encouraged "the City to revise the element as described…, adopt, and submit to HCD to regain housing element compliance."

After comparison of the HCD letters from December 2021 and the most recent of July 2022, we are concerned that the City has not sufficiently responded to the HCD's comments enough to satisfy compliance.

The July 8, 2022, letter states the following:

> *Local Data and Knowledge: While the element now includes some discussion of historical development patterns and racial exclusion for significant portion of the 20th century, it should include additional discussion of land use practices including zoning, growth controls, height initiatives and any other practices that affect housing choices since the latter half of the 20th century. This information should complement the discussion of the socio-economic patterns within the City and the City relative to the region and based on a complete analysis, the element should formulate appropriate policies and programs to combat past patterns and impacts on inclusive communities.*

The third draft fails to demonstrate strategies to combat past patterns of impacts on inclusive communities.

We assert that building ordinances, based in preservationist practices, create exclusivity and deter inclusion of very low- and low-income individuals, the disabled, and people of color. As stated in Section 6.4.6 on page 101, South Pasadena admits to adopting zoning and housing policies as recently as the 1998 General Plan with intent of limiting inclusivity if not keeping people out. This attitude continues to influence building and zoning ordinances in South Pasadena. A sampling of statements that reflect these attitudes are found in the comments from the Second Draft Housing Element are found within the Third Draft Housing Element

South Pasadena Tenants Union believes that those commenters are in the loud minority and do not represent the many who aspire to achieve a racially, culturally and economically diverse South Pasadena.

During the WISPPA presentation on 9/12, comments like "protect our neighborhoods" and "we are afraid" were responded to by City staff, not with a can-do attitude of encouraging enthusiastic cooperation with the State but a mood that supported the culture of exclusivity indicative of NIMBY culture.

- **How addressed:** The draft housing element acknowledges past exclusionary practices and states commitment through policies to ensure that there are housing opportunities for all current and prospective residents, regardless of income. (pages 76-77).

A History of Exclusion

In Section 6.4.6, the Housing Element describes decades of planned exclusion. As per the text referencing the 1963 General Plan,

"The first three objectives of the Land Use Plan were stated as:

> • *To protect the amenities of single family areas from encroachment of inharmonious uses, including higher density residential,* ***where stability and exclusiveness are desired"***

Three and a half decades later, South Pasadena doubles down on its protectionist land use policies. From The Vision Statement for the 1998 General Plan the influencers pull back the drapes of their goal of maintaining a community of historic exclusivity.

> *" In order to preserve our small-town feeling and to flourish in the 1990's and beyond, South Pasadena must be committed to the goals of revitalizing its commercial areas and preserving its single-family residential character… We are committed to maintaining a balance between our existing single and multi-family housing units which honors our traditional values and evolving cultural diversity. (emphasis added)*

We see phrases in the above passage, that we also hear today in public forum and on social media: "preserve our small-town feeling", "preserve its single-family residential character", "honors our traditional values". This rhetoric, which is elitist, remains the impetus for all things related to building, transit, and most recently wildlife in South Pasadena.

The problem with the fetishization of the past in the form of "cultural heritage preservation", is that it perpetuates systemic bias.

We refer the City to this excerpt from an article written by preservationists, Franklin Vagnone and Samantha Smith and posted a blog to Twisted Preservation, A Cultural Assets Consulting Group. If you can recognize how the existing building code, zoning laws and cultural heritage ordinance reflect the list below, then it is incumbent upon City to do more than what is stated in response to the HCD comment at the top of this discussion.

1. Preservation is essentially an elitist, class and racially divisive activity whose result is a form of economic bias and segregation.

2. History sites can perpetuate a divisive form of nostalgia that supports and validates racism and exclusion.

3. Preservation can limit inclusion and perpetuate racial & social bias by regulating cultural narratives to simple themes.

4. Historical regulations, district codes, and Preservation restrictions can be latently economically restrictive and culturally exclusionary, benefiting only those individuals who can afford the added costs, thus ensuring a form of aesthetically gated communities that reflect the dominant culture.

5. Historic districting and preservation code requirements can be a contemporary form of "redlining" which excludes a diverse economic group of people from land ownership.

6. Preservation is susceptible to the harshest form of capitalism in that only those historic sites that are targeted with money actually get preserved. Preservation choices are a matter of economics, not just history. The most revealing, unglamorous sites have rarely survived, nor have they been preserved.

7. As Preservation has become more professionalized and can require a four-year degree, college has become more expensive and thus constricts the possibility of a racially, culturally, and economically equitable pool of professional practitioners. As a result, professional practices are sometimes biased.

8. Preservationist, right now today, need to stop fetishizing the built environment and begin considering how preservation itself is part of the problem.

9. Look at the money in Preservation. A budget reflects our priorities. Money goes where it is told. There is nothing natural about the market economy or what gets preserved. **Wealth Preserves Wealth.**

10. Language as a tool of bias in Preservation with a weak notion of the appearance of diversity rather than full systemic representation. *

We will direct you to the City webpage for the Cultural Heritage Ordinance. This is the very first paragraph:

"South Pasadena prides itself on the quality and historic character of its neighborhoods and its small-town ambiance. Maintaining these qualities is considered key for retaining residents…"

The ordinance was re-established in 2017 and contains a section that reads:

"To stabilize and enhance neighborhoods and property values…"

It appears that this ordinance, in its entirety, consciously serves to maintain and increase the upper income level status quo. This ordinance, by its own admission, is counter to any inclusive housing growth in South Pasadena.

We ask that the City state within the Housing Element a commitment to analyze the Cultural Heritage Ordinance **for any and all language, policies and requirements that impede affordable housing development and promote exclusivity.** It is not enough to condemn past practices. You must correct them.

Many of these caveats in the Cultural Heritage Ordinance impede the development of new housing. Without amending the ordinance, the City will run into a plethora of issues when actually trying to achieve the goals set forth in the Housing Element.

Example: Ordinance #2315 effective August 18, 2017, 2.6.5 E.3 states that property owners wishing to demolish any property built "at least 45 years prior to application" will have to undergo an approval process by the Cultural Heritage Commission. The procedure requires the property owner to contract incur expense related to the following:

"The determination as to whether a property is a Cultural Resource shall require a deposit by the applicant to cover City costs associated with hiring a historic consultant and/or an Architectural Historian; and/or a deposit to cover the costs associated with the preparation of an Initial Study, Environmental Impact Report, Mitigated Negative Declaration or Negative Declaration."

The ordinance goes on to describe a multitude of hoops through which the for the property owner will need to jump. The Cultural Heritage Commission is a volunteer body that meets once a month. How long does the process to receive sign off form the CHC to demolish a building built in 1978 take? How much investment of time and money is that costing any properties owner who may want to develop more efficient housing on their property?

This one rule alone is a tremendous impediment to the very work you propose in the Housing Element. A "45 year" rolling benchmark would mean that the multiunit complex at 1700 and 1720 Mission Street would have to undergo CHC scrutiny for redevelopment. How does the City justify 1978 construction requiring historical review?

- **How addressed:** The recent reorganization of the Community Development Department includes creation of a housing division and additional Planning staff (Programs 2.b, 3.l), with a senior analyst to focus on housing program implementation. City staff will work with the SPTU to review the CHO to address any barriers to affordable housing that could be removed through updates to the CHO.

SB 381

We encourage the City to follow the guidelines of SB 381. Opponents of SB381 argue that the conversion of the CalTrans houses to private ownership would create affordable home ownership. However, the investment that will be needed to rehabilitate the homes to the standards required by preservation guidelines (there is that word again) would not qualify these homes as "affordable".

We ask that the City act on SB381 , and that any surplus houses be converted to affordable rentals. Those structures deemed to be beyond repair should be demolished and the land utilized by the City in partnership with affordable housing developers to build 100% affordable housing as per Program 2.1.

Further regarding the CalTrans properties, we request that the City cease its efforts in blocking the transfer of 626 Prospect to Friendship Pasadena Baptist Church. Not only is that property not ours to control, this legal wrangling looks like a taxpayer funded effort to keep certain people out of our city. Friendship Pasadena Baptist Church is the oldest African American congregation in the area, established in 1893. One would say "an historic black church". The city, bending to the will of a small group of residents, has resulted in two legal attempts to block the transfer to Friendship Baptist Church that would provide housing to low-income families. The bad optics of this story should be of more concern to the City of South Pasadena then it currently is.

- **How addressed:** As detailed in Program 1.b, existing state law (SB 381) requires that the California Department of Transportation (Caltrans) sell the surplus residential property it owns in South Pasadena for use as affordable housing. The law requires that Caltrans offer the unoccupied surplus residential properties to the City of South Pasadena first, and then to the Los Angeles County Development Authority (LACDA) and then to housing related entities. The City of South Pasadena has expressed interest to Caltrans to purchase all of the unoccupied surplus properties in the city, and is currently analyzing the feasibility of purchasing the properties for use as affordable housing. Whether the City or another entity purchases the surplus properties, any entity purchasing the properties will be required to maintain them as deed restricted affordable properties.

Tenant Protections, Homeless Prevention and Preserving Existing Affordable Housing

The Housing Element Third Draft in its effort to demonstrate an understanding of how best to obtain certification has included a couple of programs that, while seeming practical, are incomplete. There is not one mention in the Housing Element regarding programs meant to protect existing very low, low income and moderate income South Pasadena tenants from displacement.

We reference Program 1.c and Program 3.c.

Program 1.c would trigger substantial renovation evictions of which we currently have one ordinance on the books that minimally protects tenants from renovictions. Without protections in place that would allow tenants to be able to stay in the units during construction or to return to units after construction is complete, at the same rate of rent they had been paying when enforcement was issued, the City puts

tenants at displacement risk. Renters are the root of our community and to relocate them outside of South Pasadena, where their children go to school, where they may work, congregate, worship and obtain community services such as recreational classes or senior meals, is 100% irresponsible. They are not the peacocks.

We propose that the City adopt an ordinance that would require landlords to accommodate their tenants during required updates and repairs either by allowing them to remain in the units or paying their rent to live in a comparable or market rate unit still within South Pasadena. Once the property is up to code, the tenant would be able to move back in at the same rate of rent they were paying. The same ordinance should include language to protect tenants from actions by landlords that would trigger evictions or prevent the landlords from concocting ways of getting more money out of tenants such as imposing amenity fees.

SPTU is seeing incidents of landlords now tacking on "amenity fees". While rent can only be increased by 8% under AB1482, landlords are now charging arbitrary fees that are to cover "amenities" such as use of the laundry facilities, landscaping, etc. These fees are uncontrolled so not considered part of the rent, much like the resort fees at hotels. One tenant reports that her rent was increased this year by 8% and her amenity fee was increased by 100% put her monthly payment to the landlord well over the allowable amount under AB1482.

Program 3.c similarly displaces tenants without the benefit of local protections. Again, keeping existing tenants housed in South Pasadena should be our goal not relocating them to other communities. Additionally, any properties that the City might expedite for demolition, that are currently occupied, are most likely affordable. Therefore, in pursuit of acquiring 10 new units of affordable housing we could potentially be losing 20 and in the process displacing the very South Pasadenans who need them most.

We request that South Pasadena include in its Housing Element proactive and concrete actions to adopt tenant protections that would ensure that tenants displaced as a result of Program 3.c are given the best fighting chance of remaining in South Pasadena. This would include, but not be limited to, a local ordinance for relocation fees required for any no cause evictions. We refer the City to that of the City of Pasadena and Los Angeles as models for such an ordinance. As a reminder the City now defers to AB 1482 which requires that landlords only provide one month's rent as moveout fee to tenants who are evicted without cause. That is not helpful in the very least. It's actually insulting.

- **How addressed:** South Pasadena implements State law regarding tenant protections. Program 1.c states the intent "to reduce displacement risk of tenants living in currently substandard housing." When implementing a proactive program based on the survey conducted (Table VI-26), those units that have substantial violations or are dilapidated will be prioritized. It should be noted that these units are all single-family properties, and do not include multi-unit rental properties. The protection of any tenants will be included as part of this program. Program 3.c confirms replacement of lower-income housing units when new construction is proposed, in addition to the creation of new affordable housing units through the inclusionary housing program.

Maintaining Affordable Housing Inventory

Program 3.f-3.k regarding ADUs, it's our understanding that the ordinance was revised to be in compliance with state law to increase the availability of long term housing, some of which could be affordable rentals.

In the aforementioned program sections, we don't see much about enforcement particularly of the use of ADU's as short-term rentals. It is common knowledge that the housing crisis in Southern California can be partially a result of the proliferation of commercially managed full time AirBnb properties. As far back as 2015, the community of Venice lost upwards of 10,000 units of affordable housing to Airbnb operators.

Without a local short term rental ordinance there is no way to monitor the use of all these new ADU's or to prevent them from being utilize as money makers for already high-income households as opposed to housing for family members or as affordable rentals. We therefore request that the Housing Element include a short-term rental ordinance.

- **How addressed:** SPMC Section 36.350.200.K (ADUs) currently prohibits renting out ADUs for a period of less than 30 days. The City has the option to require a deed restriction to enforce this regulation.

Homelessness

Program 2.f shows no change to what South Pasadena is currently offering as homeless services under the County Measure H funding. We expected that an increase in services would be more responsive to the HCD comments especially since South Pasadena lost its only direct homeless service provider earlier this year. Shower of Hope, which was formerly serving unhoused individuals with mobile shower facilities in District 3 at Holy Family Church was also a site where homeless case managers from Union Station could regularly locate and identify individuals in need of services. Currently, South Pasadena offers no city funded services other than outreach and resource distribution to the homeless community.

- **How addressed:** The most updated data that the City has in regard to unhoused people is discussed in the Housing Needs section (page 56). However, after publication of this draft of the Housing Element for public review, the County of Los Angeles published the 2022 Point in Time count numbers, which showed that South Pasadena's homeless population increased from 15 in 2020 to 50 in 2022. The City's response system, detailed in Program 2.f responds to the data from recent County homeless counts and reflects the City's partnerships to address the issues regionally.

Lastly, we see that the City references expanding the contract with Housing Resource Center for provision of services to tenants and those seeking information and assistance with housing programs, outreach and education. Since HRC has had the contract with South Pasadena, (2016) we have yet to see outcomes of said contract.

HRC proposed that their programs services would achieve the following:

> *"…will improve and expand affordable housing options, improve services to the homeless or specials groups, and increase access to resources for low to moderate -income residents in a variety of ways"*

As two volunteer organizations, SPTU and CareFirst who work closely with tenants in crisis and the homeless population of South Pasadena, are not aware of any indication that HRC successfully achieved this goal. For example in 2020, HRC poorly advised tenants who had received no cause evictions during the LA County Eviction Moratorium telling them that their evictions were legal. This caused at least one family to self-evict from an affordable unit. HRC only responded when contacted by then Councilmember Rick Schneider. It was with the assistance of Code Enforcement and the City Attorney

that SPTU was able to prevent the renovictions from going forward and stop the evictions. This action led to the Renoviction ordinance that was adopted later that year.

Additionally, the contract states that HRC will provide educational workshops within the City of South Pasadena. To our knowledge, there has not been such a workshop since 2020.

Because the outcomes of the 2016 cannot be quantified, we recommend that the City release an RFP for the future provision of those services mentioned in the Housing Element that refer to HRC as the provider. It's been six years and it's time for a review and refresh.

- **How addressed:** The new Housing Division will be reviewing the contract with HRC, which is pending renewal, and will confer with the SPTU to ensure that the revised contract, as well as its oversight, improves service to the public and meets the needs of tenants.

Citywide Height Limit Ballot Measure Repeal

We request that a repeal is citywide and not limited to specific areas of the city. A limited repeal would not help us to move the needle on our RHNA obligation. If we are going to do it, do it with the intent of achieving the goal of increasing affordability not protecting exclusivity of certain neighborhoods.

- **How addressed:** The details of the ballot initiative will be developed with significant community outreach, as discussed in Program 2.n., with the goal of facilitating the densities needed to implement the RHNA.

Lastly, we would like to point out that the General Plan Draft action items that provide for affordable housing incentives for "creatives" may not align with fair housing practice and is counter to the goals of the State to increase housing opportunities for all people. Frankly, it's just another legal attempt to keep some people out while encouraging others to come in. We look forward to the public review and comment period for the General Plan and hope that its congruent with the Housing Element, housing equity and inclusion

We thank you for your consideration of these comments and look forward to the implementation of a Housing Element that reflects our values of inclusion, diversity, compassion and equity. We, as South Pasadenans, want to see our City contribute a housing crisis solution by being good Californians and generally decent people.

Sincerely,

Anne Bagasao on behalf of South Pasadena Tenants Union

Comments on the 3rd Draft Housing Element

Yvonne LaRose (November 11, 2022)

The Wednesday night joint Council-Planning Commission meeting brought out and discussed a number of issues in relation to a state mandated 2,065 dwelling units increase. We struggle to meet that requirement.

However, after the meeting, Alan Erlich and I talked. He pointed out that San Marino (which has a smaller population than South Pasadena) is only required to increase its dwelling units by 100. Similarly,

I think Alan mentioned Alhambra, which also has a smaller population than South Pasadena, is being required to increase its dwelling units by 200.

Alan also pointed out the reason for the drastically different requirements of the three cities. It is because South Pasadena is considered to be a transportation rich city due to the fact that the Gold Line passes through it.

While it is definitely true that the Gold Line is part of a reliable rail system of public transportation that's available on a 24-hour, 7 days a week, at 15 to 20 minute intervals, and the line does, indeed, pass through an area near the heart of the city, it deposits passengers at a public transportation bus stop (MTA Line 258) that is essentially an afterthought.

Line 258 runs every 60 minutes along Mission Street, Monday through Friday. It is not operational on Saturday or Sunday. It has 29 stops; among them are CSULA, where it appears it only stops two times, at 9:23 PM and 10:23 PM. Of the three routes it offers, one terminates at Avenue 63 and York Bl. as it passes along South Pasadena via Mission Street.

South Pasadena also has the benefit of MTA Line 260 which runs the length of Fair Oaks from the Alhambra border, through South Pasadena (past Huntington Hospital), and then into Pasadena. That line runs every everyday, starting from the Artesia Station at 4:21 AM and ends at 10:31 PM. at approximately 15 to 20-minute intervals.

South Pasadena offers its residents who are seniors and/or disabled transportation five days a week (Monday through Friday) from 8:30 AM to 4:00 PM via Dial a Ride. We have learned through the Community Services highlight during a Council meeting that the new scheduler considers all passengers are interested in getting to medical appointments or shopping, typically for groceries. The scheduler will confirm a reservation but makes an independent, subjective determination as to whether the reservation should be honored and will (sometimes without notice to the passenger) cancel or change a reservation, leaving the client without transport and needing to change their business itinerary and appointments for that day unless they are able to use an alternative transportation service.

Dial a Ride has become a dismally unreliable means of transportation in and around South Pasadena.

While there are other transportation alternatives such as Uber, Lyft, Access, or taxi, the above three public transportation systems constitute the "rich transportation" of South Pasadena. Given the limited availability of the City's staple transportation, it can be said with accuracy that South Pasadena is definitely not a transportation rich city.

Based on this analysis, the City should challenge the requirement to develop 2,065 units. The burden on a city of 2.5 square miles is too great. The "rich transportation" is imaginary. What does exist can barely support the 25,000 residents; to add even 2,000 additional people (let alone dwelling units) would overtax all of the City's resources.

- **How addressed:** There are many different factors that are taken into account when determining a City's Regional Housing Needs Assessment, including the proximity to jobs and transit access. The City was allocated 2,067 units after the reallocations by SCAG after several agencies made various appeals and many factors were weighted. The City is addressing the full amount of its share of housing needs as determined through the RHNA process, and this Housing Element has been drafted to meet those housing needs.

Yvonne LaRose (November 12, 2022)

It seems Agenda Items 3.3 and 3.4 had exhibits to be used with them. Those exhibits were not in the Council chamber when the meeting started. Perhaps they were available at the booth in the lobby of City Hall. The lack of such exhibits for the public made grasping all of the proposed details difficult to navigate. Some members of the audience had questions about the proposed changes but were unable to present those questions and concerns. Frustration was the result.

One of the properties involves Foremost Liquor at Monterey Rd. and Pasadena Ave. The proposition is to remove that structure and convert the property into a different type of use, possibly residential. The issue with that prospect is that is the only convenience store in the area and appears to generate more business and revenue than the small businesses on the west side of Monterey Road. Perhaps there are other alternatives to removing that business. Interpretation of the proposed change seemed to be tear out the liquor store and rebuild with a multi-use/family dwelling.

- **How addressed:** Foremost Liquor (Site 5 in Appendix A) will be rezoned as part of the larger Ostrich Farm Mixed-Use area to remove barriers to and incentivize the production of housing units. The City is not "tearing out" the liquor store. This mixed-use area will include additional retail opportunities for the west side of the city, which may include a liquor store.

There was also discussion of the Pavilion's parking lot. The proposal is to resurface the parking lot (which was recently completed), install additional parking, as well as build a residential building on the lot. No one in the audience could envision a dwelling unit on that lot that would aesthetically blend in with the area. There also seems to be quite limited space for a proposed dwelling unit in that location. The proposed changes do not appear to be feasible.

- **How addressed:** The Pavilions parking lot (Site 16 in Appendix A) is approximately 2.67 acres of flat land within a transit rich area. As discussed in the letter from the property owner, the owner intends to redevelop the entire site with a new store which would include a housing component. It is anticipated that the new store will be approximately the same size as the existing store, leaving an area equivalent in size as the parking to for development of parking and residential uses. Appendix A has been updated to reflect this additional information.

Moving just one-half block to the south of the Pavilion's site is Golden Oaks Restaurant, which is also proposed as a site for demolition and erection of a multi-unit dwelling, plus parking spaces. Again, the aesthetics of that type of change is questionable, not to mention there is scant space to make those types of changes.

- **How addressed:** Aesthetics are not an issue that is considered or addressed under state law in the Housing Element. Such issues are addressed through zoning regulations such as the Downtown Specific Plan that will come after the Housing Element indicates were to locate housing resources. Parking is not required in this area due to recently enacted state law under AB 2097 prohibiting cities from imposing minimum parking standards for residential and commercial projects within one-half mile from public transit. Program 3.b has been revised to commit the City to updating its zoning code to conform to the parking standards set by state law.

It sounded as though the Public Works yard is also being planned for renovation and demolition. It's troubling to try to understand where Public Works will be located if their base is removed. Perhaps what was missed in the interpretation of the proposal is that the yard will somehow be upgraded (perhaps with more energy refueling pumps) and remain in the same location.

- **How addressed:** The City's existing Capital Improvement Program includes a list of sites suitable for relocation of the activities currently conducted at the Public Works yard. The City intends to vacate the Public Works Department from this site so it can be redeveloped as affordable housing with no Public Works activities remaining on the site.

These are the proposals that more significantly stand out in my recollection of Wednesday's meeting.

1131 El Centro St is a 3 story condo complex built in 1988. You guys cite it as an example of buildings recently built in South Pasadena. What is the substantial evidence the current use will be discontinued as required for low income sites??? Are they going to tear down new condos for new condos?? And you are required to subtract the current apartments from the proposed apartments for your counting of units.

--

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

- **How addressed:** 1131 El Centro St. is not an identified site for affordable housing production and therefore the Housing Element does not need to show there is substantial evidence that the existing use will discontinue during the planning period. 1131 El Centro St. is a part of the Downtown Specific Plan area. An area-wide analysis was conducted of the Downtown Specific Plan where it is expected that some portion of the area will be redeveloped during the planning cycle due to the adoption of the new Downtown Specific Plan and policies implemented as part of the Housing Element update process. The possibility exists, and that the Housing Element programs make it more likely, that these 34 year old builds are redeveloped during the planning period.

Josh Albrektson (November 21, 2022)

700 Orange Grove Ave is a 3 story Condo Complex built 20 years ago. You guys are claiming there is a chance that this 3 story Condo Complex might be torn down for a replacement 3 story apartment building. Can you guys point to a place where this has happened somewhere else?? What is the substantial evidence the current use will be discontinued as required for low income sites??? And you are required to subtract the current apartments from the proposed apartments for your counting of units.

The Housing Element simply says that the possibility exists, and that the Housing Element programs make it more likely, that these sites will be redeveloped during the planning period.

Josh Albrektson (November 22, 2022)

Every single house in the next two pictures are single family homes that South Pasadena claims will be torn down and replaced with a low income unit. By law, south Pasadena is required to subtract the current unit count from any potential future unit count, so for all of these they should not be able to claim any housing.

- **How addressed:** Images were not provided as part of this comment. It is unclear which single family homes are being discussed in this comment.

For every current housing site in the downtown specific plan South Pasadena didn't subtract the current units on the site as required by law. For example at 820 Mission there is a 38 unit condo complex. South Pasadena is claiming 17 units at this site and not subtracting any of the current condos.

This is the case for 50 of the sites claimed in the Downtown Specific Plan.

Sent from my iPad

--

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

- **How addressed:** The projected number of units for 820 Mission St. does subtract the existing dwelling units from the calculation of the projected net increase in housing units on the site. The site is an approximately 1.75 acre and is located in the proposed Downtown Specific Plan area. This area will allow for a maximum of 70 du/ac, which means the site will accommodate up to 122 dwelling units. As mentioned in the comment, there are currently 38 existing units on the site, which would net 84 housing units if it were to be redeveloped. The analysis of the Downtown Specific Plan anticipates there is a 20% likelihood that a parcel in the Downtown Specific Plan is redeveloped. Twenty percent of 84 housing units is 16.8, which was rounded to 17 as the number of net new housing units anticipated on the site prorated for the likelihood of redevelopment of the site.

Josh Albrektson (November 22, 2022)

All page numbers refer to the 3rd draft page numbers

For APN 5315021008 on page 191 South Pasadena claims 27 units on a 0.57 lot. This is the southern part of the mission meridian complex built in 2006 and there are already 23 units on this lot.

For APN 5315021031 on page 191 SoPas claims 20 units on a 0.45 lot. This is the middle part of the Mission Meridian complex built in 2006 and there are already 20 units on this lot.

For APN 5315021051 on page 188 SoPas claims 24 units on a 0.65 acre lot. This is the north part of the Mission Meridian complex built in 2006 that already has 23 condos on the lot.

For APN 5315007055 on page 185, SoPas claims 22 units on a 0.91 acre lot. This is a 21 unit condo complex built in 1988.--

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

- **How addressed:** Each of these lots are located in the Downtown Specific Plan area, where an area-wide analysis was conducted. As discussed above for 820 Mission St., the number of existing units was removed from the projected calculation of net new units being claimed in the Housing Element.

Josh Albrektson (November 22, 2022)

On page 193 it is claimed that the realistic capacity is based on 20% of the sites being developed at 100% capacity.

The total acreage is 54.95 acres with a density of 50 DU/acre. This is a maximum capacity of 2748.

20% of 2748 is 550 units, not 642 units as claimed.

--

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

- **How addressed:** The maximum density of the Downtown Specific Plan is 70 du/ac, not 50 du/ac. Table VI-51 has been corrected in the Fourth Draft to reflect the corrected maximum density. Table VI-51 does identify the total acreage of the Downtown Specific Plan area that has the potential to be redeveloped as 54.95 acres. At a density of 70 du/ac, the maximum capacity of this area is 3,846 units. Twenty percent of 3,846 is 769, which is more than the 642 units that is anticipated to be developed in the Downtown Specific Plan area during the planning period.

Josh Albrektson (November 22, 2022)

Josh Albrektson (November 22, 2022)

For Site 16 you guys claim that only the parking lot will be developed and not the newly renovated grocery store that had a grand re-opening on August 3rd.

You can hear the city council and planning commission trying to explain possible ways that the parking lot could be developed without disrupting the grocery store from 27:00 to 31:00 of the November 9th meeting. They were discussing what they would say that HCD would find acceptable. It is pretty obvious that the owner is not themselves considering developing just the parking lot.

http://www.spectrumstream.com/streaming/south_pasadena/2022_11_09.cfm

How can you guys claim there is substantial evidence that the parking lot will be developed when it is clear from the meeting that the owner is not actually considering it??

--

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

- **How addressed:** The property owner of Site 16 has provided a letter expressing their intention to redevelop the entire site with a new store within the 6th Cycle. It is anticipated that the new store will be approximately the same size as the existing store, leaving an area equivalent in size as the parking to for development of parking and residential uses. Appendix A has been updated to reflect this additional information.

Josh Albrektson (November 22, 2022)

For Site 14 the owner is getting a new foundation for one home and once that homes foundation is finished he is planning on moving on and doing the foundation of the second home. This site is 2 blocks from city hall. You guys can go down and see the Foundation Repair LA INC sign in front of 1508 El Centro right now. Attached to this e-mail is a picture of this sign if it doesn't make it into the comments section of the Housing Element.

How can you guys claim there is substantial evidence that the current use is being discontinued when the current owner of these single family homes is getting two new foundations at this time??

1500 to 1518 Mission Street were all built over 100 years ago and considered to be part of the historic business district. Is South Pasadena going to allow a by right housing project on this site if it is 20% low income????? What is the substantial evidence the current use will be discontinued as required for low income sites??

--

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

- **How addressed:** The buildings at 1500 to 1518 Mission Street are not a part of a designated historic district, although they are eligible to become part of a historic district. The buildings at 1500 to 1518 Mission Street are not identified sites for affordable housing production. The buildings at 1500 to 1518 Mission Street are a part of the Downtown Specific Plan area. An area-wide analysis was conducted of the Downtown Specific Plan where it is expected that some portion of the area will be redeveloped during the planning cycle due to the adoption of the new Downtown Specific Plan and policies implemented as part of the Housing Element update process. The Housing Element simply says that there is a chance that this site is redeveloped during the planning period.

- **How addressed:** 707 to 809 Meridian is not an identified site for affordable housing production and therefore the Housing Element does not need to show there is substantial evidence that the existing use will discontinue during the planning period. 707 to 809 Meridian is a part of the Downtown Specific Plan area. An area-wide analysis was conducted of the Downtown Specific Plan where it is expected that some portion of the area will be redeveloped during the planning cycle due to the adoption of the new Downtown Specific Plan and policies implemented as part of the Housing Element update process. The possibility exists, and that the Housing Element programs make it more likely, that this site is redeveloped during the planning period.

Josh Albrektson (November 30, 2022)

1124 Fair Oaks Ave is a 3 story Freemason building. It is one of the oldest buildings in South Pasadena. What is the substantial evidence the current use will be discontinued as required for low income sites??? Would South Pasadena allow it to be torn down??

Via Hand Delivery

Subject: Pavilions #2228; 1213 South Fair Oaks Avenue, South Pasadena

Dear Ms. Frausto-Lupo:

I am writing in response to your request related to the City's draft General Plan Housing Element to advise you that ACI, parent company of Pavilions, is considering redevelopment of the subject property sometime prior to 2029. The plans being considered include redevelopment of the entire site and would consist of a new store, residential uses, and parking. We look forward to continuing to serve the residents of South Pasadena.

Very truly yours,

SAM SHINK
Director of Real Estate

letter to city of SP regarding redevelopment plans

Mark Gallatin (December 5, 2022)

I would respectfully like to suggest the following alternate language for that found on page 216 of the September 2022 Draft Housing Element:

Program 1.b. - Convert Caltrans Homes to Affordable Housing

The City will leverage the 68 Caltrans surplus properties that have resulted from the State's cancellation of a proposed route to extend the 710 freeway through South Pasadena to generate capital to create new and rehabilitated, deed restricted, affordable housing units throughout the city. The City has initiated a property sales program for the 710 freeway surplus properties. The City worked with Senator Portantino to pass SB 381 and the emergency rulemaking regulations were released on March 28, 2022. The City will have priority to purchase the surplus properties after the existing tenants. The City has been working with Caltrans to obtain property files and to schedule inspections in order to evaluate the surplus properties. SB 381 also requires that any proceeds from historic properties purchased by the City at Caltrans minimum (acquisition) price and then subsequently sold at Fair Market Value be used to generate affordable housing at a ratio of 3 to 1. Funding has been secured for a feasibility study on the surplus properties that are available to be converted to permanent affordable housing.

Eight-year Objective: Complete a feasibility study and use the recommendations to support decision-making regarding possible strategies, including but not limited to, partnerships with non-profit affordable housing developers, to expand housing mobility opportunities for lower-income households and revitalize underused areas.

Funding Source: Measure H

Responsible Agency: Community Development Department/City Manager's Office

Timeframe: Conduct feasibility study in 2022; technical assistance and work with nonprofits at least annually throughout planning period. More specific timing pending State implementation processes.

- **How addressed:** As detailed in Program 1.b, the City is complying with the acquisition process authorized by SB 381 for the acquisition of the surplus Caltrans properties. The City has not made any determinations regarding the eventual dispensation of the Caltrans homes. Currently, the City is doing its due diligence regarding the condition of the homes and the possible financing mechanisms for rehabilitation of the properties. This analysis includes researching possibilities regarding increasing the number of units on Caltrans home sites, where feasible. However, since the due diligence work is ongoing, it is not possible for the City to commit to any course of action regarding these homes at this time.

- **How addressed:** As addressed in the response to the comment dated November 22, 2022 regarding these same parcels, each of these lots are located in the Downtown Specific Plan area, where an area-wide analysis was conducted. As discussed above for 820 Mission St., the number of existing units was removed from the projected calculation of net new units being claimed in the Housing Element..

Delaine Shane (December 6, 2022)

To the Housing Element Consultant and City Management:

Enclosed are my comments pertaining to the red-lined version of the Draft Housing Element, Version 4. Frankly, I didn't read your recent document—just skimmed it. No realistic time was given to us to allow for a thoughtful read through. In addition, while I appreciated the City's turnout at our most

recent walk through in the Meridian neighborhood that has several of the vacant Caltrans properties, having the Consultant snap a picture of us and marking that check box as being part of public engagement is a false narrative.

A mindset at City Hall continues to exist, as exhibited in this draft document, that the non-legislative alternative to SB 381 and the Caltrans properties is either non-existent or illegal. It is NOT illegal. I and others have already provided you with information readily available on the internet that it has been done and can be done in California by government entities.

Nothing in Caltrans' regulations prevents that agency from implementing the non-legislative alternative that the South Pasadena Preservation Foundation has so clearly prepared and presented to the City on numerous occasions. Just because Caltrans says NO? So, why aren't our City officials meeting with our state legislators to convince Caltrans otherwise? This wouldn't be the first time that Caltrans is misusing its powers to the detriment of our community. I and my neighbors expect that our City management and Consultant support us and not dictate a choice that they themselves would not appreciate if they lived in our community.

All we want are for the vacant properties to be sold to qualified buyers (be they present/former Caltrans tenants or other qualified buyers) who will fix up their homes, live in them, pay their fair share of property taxes, and contribute to our wonderful and diverse neighborhood. This can still happen if the Housing Element is revised to include the very viable non-legislative alternative to SB 381, i.e., side-by-side escrow agreements. These properties were what the Freeway Fighters were fighting to preserve for over 60 years. It would be a harsh and cruel irony if the houses were torn down not by Caltrans but by the City or its designees (HREs).

Sincerely,

Delaine Shane

2003 Meridian Avenue

[Continued on next page]

Comment Nos.	Page Nos.	Statements of Concern in Red-lined Version	Public Comments on Draft Housing Element's Statements (Version 4-Red-lined)	City Response
1	2-3	"SB 381 requires that Caltrans offer unoccupied homes for sale to the City of South Pasadena. If the City does not purchase the properties, Caltrans will offer them for sale to the Los Angeles County Development Authority (LACDA), and if LACDA does not purchase the homes, they will be offered to a Housing Related Entity (HRE)."	This statement does not include the non-legislative approach on the disposition of vacant Caltrans housing that the South Pasadena Preservation Plan (SPPP) has been presenting to the City of South Pasadena (City). That is, the more efficient, economic, and expeditious process of side-by-side escrow agreements for unoccupied homes. Yes, this section of the Housing Element is on legislation; however, MANY discussions between the City and the public also concerned a parallel track involving a viable non-legislative track in conjunction with SB 381. The City did agree to consider this non-legislative approach during previous discussions between the City Council and Ad Hoc Committees. This process is legal and is done by other governmental entities. If Caltrans is not interested in such an approach, why isn't our City Council seeking relief on this matter with our newly elected State Assembly Member Michael Fong or other prominent state legislators? Getting entangled in a large real estate portfolio and process could result in the City Council not meeting its other mandates to its residents. As a reminder, here is a slide from the City Council Agenda, Item No. 14, July 21, 2021 (though I vehemently disagree that this is a "perceived problem"):	SB 381, which the City supported, provides a framework for Caltrans to sell its surplus property in South Pasadena. If the City does not purchase the properties, it is expected that Caltrans will offer them to the Los Angeles County Development Authority and then on to other parties identified in the law. Caltrans must offer these homes for sale in accordance with SB 381, other options do no exist under existing law.

Comment Nos.	Page Nos.	Statements of Concern in Red-lined Version	Public Comments on Draft Housing Element's Statements (Version 4-Red-lined)	City Response
			 Forum Notes from April 14, 2021 Topics/Amendment: Perceived problems Key Ideas/Concepts: 1. South Pasadena Preservation Foundation (SPPF) Subcommittee provided a revised proposal on April 14th and welcomes the opportunity to discuss priorities. 2. SPPF believes there is a non-legislative solution and would like to see the City work with the Senator to transfer managing control of the program to the local level. 3. Viability of the side-by-side escrow concept The City should behave as a pass through to allow current/former tenants and/or qualified home buyers and not get into the real estate developer's market nor sell to HREs. Our community want the homes to be returned to homeowners that meet the criteria of the Roberti Act so that these properties return to the tax roll. Sixty plus years of these Caltrans homes have yielded NO PROPERTY TAXES! It is time for this situation to be changed by relying on side-by-side escrows. THEY ARE NOT ILLEGAL!!! Specific text should be added to the fourth version of the Housing Element that includes the option of side-by-side escrows.	
2	3	"AB 2011, the Affordable Housing and High Road Jobs Act of 2022, was signed into law on September 28, 2022. AB 2011 allows for ministerial, by-right approval of affordable housing on commercially-zoned lands, and allows for mixed-income	How does the City intend to be a good steward of our precious historic resources in light of AB 2011? What protections will there be for the City's approved historic landmarks and potentially historic structures have in commercially zoned lands? It is difficult to view specifics in Appendix A as to which structures would fall under AB 2011, but I have been told that the Kaldi's Coffee building could	AB 2011 does not apply to projects where, "the development would require the demolition of a historic structure that was placed on a national, state, or local historic register."

Comment Nos.	Page Nos.	Statements of Concern in Red-lined Version	Public Comments on Draft Housing Element's Statements (Version 4-Red-lined)	City Response
		housing along commercial corridors so long as the project meets certain labor and environmental criteria."	be vulnerable to being torn down. This is the City's first bank and still retains its integrity, association, and context from a historic perspective. Does that mean that many of our landmarks whether on the City's list or not, can be destroyed? Also, what is meant specifically by the phrase "…certain labor and environmental criteria?' This is a legal document and one which will be available to the public. The residents do not necessarily have the time or the opportunity to cross check AB 2011 with other documents to understand what this means or what the ramifications are for them and for the City.	
3	5	Program 1.b - Convert Caltrans Homes to Affordable Housing "The California Department of Transportation (Caltrans) is obligated by State law to offer unoccupied Caltrans-owned surplus residential properties located in South Pasadena for sale to the City of South Pasadena. The City has expressed interest to Caltrans in purchasing these twenty (20) unoccupied surplus properties through this State program, which contain twenty-two (22)	Please clarify the text -- will this conversion program result in rental property or home ownership? My neighbors and I support affordable home ownership for these vacant homes where the owners will fix the houses up and live in them and contribute to the well being of our neighborhood, which is quite diversified. The homeowners, like us, will then be paying property taxes. Currently, Caltrans pays zero in property taxes. The vast numbers of these vacant houses are in the southwestern portion of the City. If they go to HREs, then the houses will continue to not be on the tax rolls. The neighborhood will continue to be disproportionately impacted due to the legacy of the SR 710 Extension Project.	These decisions regarding whether the homes will be for-sale or rental, or whether an HRE will be involved in the renovation or other aspects of the project, have not been made by the City at this time.

Comment Nos.	Page Nos.	Statements of Concern in Red-lined Version	Public Comments on Draft Housing Element's Statements (Version 4-Red-lined)	City Response
		housing units. If the City does not purchase the properties, Caltrans will offer them for sale to the Los Angeles County Development Authority (LACDA), and if LACDA does not purchase the homes, they will be offered to a Housing Related Entity (HRE). State law requires Caltrans to place a deed restriction on these surplus properties ensuring that they are made available for purchase by moderate-income households or for rent to lower income households to moderate or lower income households. Through this Program, if economically feasible, the City will preserve and rehabilitate these properties, and make them available to moderate and lower income households."	This program is biased and not equitable where affordable housing should be distributed throughout the City. The City Council has already approved several large mixed-use developments with NO affordable units (except for Mr. Odom Stamp's project at 625 S. Fair Oaks Avenue). Yet, these Caltrans homes that have been allowed to deteriorate over the decades are being considered as affordable rentals rather than as affordable home ownership that will put these properties back on the tax roll. The City should NOT be involved with rehabilitating these homes. Our streets have not been paved for decades, the failing West Side Reservoir is a human disaster waiting to happen, we don't have decent street lighting, we deal with speeders that don't even live in our neighborhoods but wear out our pot-holed and ever deepening cracks (which in turn will impact existing substructures embedded below the streets), etc. How can the City consider funding this program through the General Funds or relying on HREs? Why not provide the residents who live here now with the services that we deserve. As mentioned in Comment No. 1, the City should employ the non-legislative approach, i.e., the side-by-side escrow agreements. The City has had issues with HREs in the past who don't take responsibility in managing their properties, not to mention the loss in tax revenues to the state and City. There is also nothing	

Comment Nos.	Page Nos.	Statements of Concern in Red-lined Version	Public Comments on Draft Housing Element's Statements (Version 4-Red-lined)	City Response
			mentioned about providing security of the Caltrans houses between the times of the purchases by the City and the properties eventual sales. We have been living in fear with the brazenness of squatters and more importantly the danger that these decrepit houses pose, including faulty electrical wiring, mold, asbestos, sewage spills/leaks, etc. that could be released should the squatters inadvertently initiate a catastrophic event. Our houses are so close together that we fear our homes would suffer whatever happens to the nearby Caltrans homes caused by squatters. There is nothing here in this document that alleviates our concerns about our safety.	
4	62	"Development may have also been hindered by the City's decades-long struggle to reverse the planned 71 Freeway extension, which was finally cancelled by Caltrans."	The "71 Freeway"? I've noticed a lot of spelling errors throughout the document. We are paying the consultants a lot of money to write properly. "Cancelled by" Caltrans? A number of individuals, organizations, and municipalities rose up and fought against this useless project and Caltrans for decades. This statement makes it seem as if Caltrans just changed its mind. Revise this statement to interject reality and accuracy.	The identified typo has been corrected.
5	63	"These incentives include height increases and waivers from setbacks, floor area ratios, parking, and other requirements for eligible residential projects."	The author was originally correct by stating "concessions" rather than the revision to "incentives." What are the eligible residential projects? List specifics and how much is the City giving away to the developers? Will there be any yards in the future for new housing? Where will the cars be parked since most residents will still be using their own transportation, whether gas powered or	The identified changes to development standards are incentives for projects to include affordable units. These incentives are required by State law.

Comment Nos.	Page Nos.	Statements of Concern in Red-lined Version	Public Comments on Draft Housing Element's Statements (Version 4-Red-lined)	City Response
			electric powered? How tall will the height increases be? Does our Fire Department have the capability to put out fires on high rise buildings?	
6	209	"Caltrans has initiated a three-phased property sales program for the 710 surplus properties. Staff continues to work with representatives of Caltrans, California Department of Housing and Community Development, and the California State Transportation Agency to discuss potential affordable housing strategies. The City is also working on a plan to take advantages of opportunities provided in SB381 to procure surplus properties in order to enable affordable housing development. A new housing division is being established in the Community Development Department to develop and administer affordable housing including these efforts. "Funding has been secured for a feasibility study on	Same comment as in Comment No. 1. No mention about the non-legislative and legitimate approach of relying on side-by-side escrow agreements. And just what will the Housing Division do when "administrating affording housing?" Will the City or its designee, an HRE, manage the affordable units, collect the rent, and maintain the units? How can that be when so much of our neighborhood needs vital services and maintenance activities now? The City is not qualified to handle this major endeavor and to pass it to an HRE will just be a repeat of Caltrans' past behavior.	SB 381, which the City supported, provides a framework for Caltrans to sell its surplus property in South Pasadena. If the City does not purchase the properties, it is expected that Caltrans will offer them to the Los Angeles County Development Authority and then on to other parties identified in the law. Caltrans must offer these homes for sale in accordance with SB 381, other options do not exist under existing law.

Comment Nos.	Page Nos.	Statements of Concern in Red-lined Version	Public Comments on Draft Housing Element's Statements (Version 4-Red-lined)	City Response
		surplus Caltrans properties available to be converted to permanent affordable housing ($30,000 – Measure H)."		
7	219-220	Discussion related to Program 1.b - Convert Caltrans Homes to Affordable Housing	Same comment as Comment No. 3. Security costs will be excessive with respect to the program and to date those costs have not been estimated. Occupancy by October 2024 is also overly optimistic. Given the bureaucratic processes of both agencies, the costs and distribution of supplies and equipment, labor availability, the unanticipated repairs that are yet to be discovered until rehabilitation occurs, and the requirement that if HREs are involved that they can pay prevailing labor wages is naïve thinking at best when dealing with renovation projects of this magnitude. Selling these properties immediately in side-by-side escrows will substantially alleviate the risks to the City and will enable the City to focus on existing and urgent City matters and services. As yet again a reminder, just look at the snail's pace of the City in turning two vacant former Caltrans lots into pocket parks. Several years have passed and the City is still working with designers/engineers with no results at this time. Imagine if security was focused on those sites? Such costs would be astronomical.	The City has not made any determinations regarding the eventual dispensation of the Caltrans homes. Currently, the City is doing its due diligence regarding the condition of the homes and the possible financing mechanisms for rehabilitation of the properties. This analysis includes researching possibilities regarding increasing the number of units on Caltrans home sites, where feasible. However, since the due diligence work is ongoing, it is not possible for the City to commit to any course of action regarding these homes at this time.

South Pasadena Tenants Union and Care First (December 8, 2022)

City of South Pasadena
Community Development Department

grant@mobius-planning.com

CC: California Housing and Community Development
Paul.McDougall@hcd.ca.gov
Connor.finney@hcd.ca.gov

Regarding: South Pasadena Housing Element, Fourth Draft

Dear Ms. Frausto-Lupo,

Care First South Pasadena and the South Pasadena Tenants Union write jointly to provide feedback about South Pasadena's third draft of the Housing Element.

Executive Summary

- South Pasadena should develop affordable housing throughout the City to create income diverse neighborhoods and promote fair housing. We want the City to:
  - Use the 20 vacant Caltrans house sites,[1] which the City will purchase in the coming months, to develop a blend of duplexes, triplexes, quads, and denser multi unit buildings for affordable ownership and rental opportunities. A number of the vacant houses are 0.25-0.50 acres and could accommodate multi-unit development.
  - Pilot an affordable ADU program, like the Backyard Homes project in Northeast Los Angeles (https://www.mas.la/affordable-adus).
  - Recruit 100% affordable developments through non-profit low-income housing developers, identify at least four (4) viable locations for 100% affordable developments, and identify potential financial and regulatory incentives the city could offer such developers.
- South Pasadena should take more steps to support and protect renters and maintain availability of existing below-market units, including:
  - Enact an urgency ordinance before January 1, 2023 to amend South Pasadena's no-cause eviction ordinance to require landlords to pay tenants increased relocation assistance if they are being evicted.
  - Offer financial assistance to low- and moderate-income tenants and prospective tenants, including Section 8 voucher holders, for security deposits and rent.
  - Enact a rent control ordinance.
  - Fund improvements at below-market rental units in exchange for landlords' covenants not to evict existing tenants or raise rents excessively.

I. Promoting Affordable and Fair Housing Development

The Housing Element determined that the City's "prior race and ethnicbased socio-economic discrimination had a long-term impact on racial diversity in the City" which is only 3.6% Black or African

[1] For a sites inventory of the vacant Caltrans properties, see a map we created at https://www.google.com/maps/d/viewer?mid=1nt13dEdP-7ddQxN85ewo35xhQEKD-kc&ll=34.11207520783854%2C-118.1570014&z=15 (last updated Dec. 7, 2012).

American and only 18.5% Latinx. (Redline of Fourth Draft Housing Element at 39). Limiting multifamily development has made South Pasadena unaffordable, which contributes to the City's lack of diversity. Zoning data from August 2021 revealed that approximately 75% of all residentially zoned land in South Pasadena is zoned exclusively for one or two dwelling units per parcel that do not allow for higher density housing such as apartments or condominiums (Id. at 104). Jurisdictions with the highest proportion of exclusively single-family zoning have the highest percentage of White residents and lower rates of diversity generally. (Id.).

During the last housing element cycle, only 10 affordable units were permitted out of 93 new units. The City has not tracked whether any affordable units have, in fact, been developed.

Despite these deeply concerning data, the City's Fourth Draft Housing Element falls far short of what is needed.

Vacant Caltrans Houses. Under SB 381, the City will soon acquire 20 vacant houses currently owned by Caltrans.[2] The houses are dilapidated from years of vacancy and lack of maintenance. They are in residentially-zoned areas. Under SB 381, the houses must become deed-restricted affordable housing for low- or moderate-income people for a period of 45 or 55 years, depending upon whether they become owner occupied housing units or rental units, respectively.

The vacant Caltrans houses represent a monumental opportunity for South Pasadena to expand affordable multifamily housing in South Pasadena, yet they are scarcely mentioned in the Housing Element. The City proposes Program 1b to "preserve and rehabilitate" the vacant houses and make them "available to moderate or lower income households." This program was modified from the Third Draft, but in the wrong direction by committing to "preserve and rehabilitate" the houses.[3]

Care First and the Tenants Union implore the City to:

- Add the vacant Caltrans houses to the site inventory, including data regarding the lot size, year constructed, and historic designation (or not), and maximum potential number of affordable units that could be made available at each site for rental and/or ownership.[4]
- Upzone residentially zoned areas in South Pasadena, including along the 710 corridor, to accommodate denser housing.
- Implement SB 9 and SB 10 at the vacant Caltrans sites by clearing a path for multifamily housing in the form of duplexes, triplexes, quads, and 10-unit buildings where possible.[5]

[2] Following this first phase of acquisition, the City will likely have future opportunities to purchase more Caltrans homes if they are refused by current occupants. To prepare for this near future, the City should apply a similar framework as we propose here for the conversion of these properties into multi-unit affordable housing, while preventing displacement or meeting the housing needs of current tenants. The City should account for these plans in the Housing Element.

[3] The significance of this change, though seemingly minor, is that the South Pasadena Preservation Foundation has been lobbying the City to bypass SB 381 and sell all 20 vacant Caltrans properties at fair market value to private buyers who would restore them as single-family houses. At a City Council meeting on December 7, 2022, the Chair of the City's Cultural Heritage Commission told the City Council that he has petitioned to add all the Caltrans houses to the national historic registry. The City Council is capitulating to the demand that it "preserve and rehabilitate" the houses. The vacant houses are dilapidated; each will cost hundreds of thousands of dollars to restore. In other words, these houses are teardowns but for the primacy of "historic preservation" in our town. We recognize that South Pasadena is home to beautiful architecture. But valuing historic preservation above all else is backward in the midst of a severe housing crisis.

[4] Given that the City has included a number of non-vacant sites in its sites inventory, it follows that the City should add the tenant-occupied Caltrans houses to its sites inventory as well as potential sites for affordable housing development.

[5] The Housing Element claims that South Pasadena is built out, and that "[i]t is too early to tell how many single-family property owners with parcels that are not within historic districts will opt to build two units or subdivide their lots to build more, but the City will review and approve applications under the new regulations in compliance with both State and local

- Develop auxiliary dwelling units as affordable rental units at as many of the houses as possible.

We ask the City to explore denser development with the larger houses, such as:

- 535 Meridian St. (21,920 sq. ft., ~ 0.5 acres),
- 530 Orange Grove Ave. (7500 sq. ft.) and 534 Orange Grove Ave. (10,010 sq. ft.) (adjacent parcels that represent 17,510 sq. ft., ~0.40 acres),
- 1131 Columbia St. (16,998 sq. ft., ~ 0.39 acres),
- 529 Prospect Ave. (15,419 sq. ft., ~0.35 acres),
- 540 Prospect Ave. (11,505 sq. ft., ~0.26 acres),
- 217 Fremont St. (13,310 sq. ft., ~0.31 acres)
- 216 Fairview Ave. (13,240 sq. ft., ~0.30 acres),
- 1110 Glendon Way (11,250 sq. ft,. ~0.26 acres).

Compare these lot sizes to the lot sizes in Table VI-49 (at 182), Representative Projects on Small Sites in Region. In Pasadena and Santa Monica, developments on comparable lots accommodate 15-53 units. Conservatively assuming 20 units per parcel on the large lots listed above, **the City could add 160 affordable rental units on these parcels alone.**

The Fourth Draft Housing Element slates virtually all of the housing affordable to very low- and low-income people in areas zoned as Business Park, Commercial, Community Facilities, Mission Street zoning areas save for one site in the Estate and Very Low Density Residential area (335 Monterey Rd.). (Table VI-50).

The Housing Element's allocation of all low-income housing to transit corridors, outside of residential single-family neighborhoods, does not comply with principles of fair housing. Concentrating dense low-income housing in certain limited areas is antithetical to affirmatively furthering fair housing. It undermines meaningful housing integration in this exclusionary town. The City should rezone single-family areas within the City, including along the 710 freeway corridor, to allow for more affordable housing. The vacant Caltrans houses could provide housing to low-income people within single-family home residential areas, and further the City's goal of creating income-diverse neighborhoods.

SB 381 allows the City to sell seven (7) houses designated as historic "as-is" at market rate to private buyers, so long as it uses the funds to develop affordable housing at a 3:1 ratio. The City **should not** opt for this route. There is no scarcity of large estate houses in South Pasadena. There is an acute shortage of affordable housing. The City should develop multi-unit housing on the historic and non-historic Caltrans parcels alike.

If the City does sell the historic houses, the **Housing Element should reflect its plans to commence construction of affordable units *within three years*, as required by statute**. As evidenced in this draft of the Housing Element, the City is short on available sites for affordable housing development and has identified no potential affordable housing projects that will start or be completed within this short time frame. The Housing Element should identify where those units will go, how they will be financed, what type of housing it will build, etc.

No matter what, the City should not aim to "preserve and rehabilitate" these homes by pursuing historic designation of new properties. These were strategies used once to prevent the building of the 710

codes." (143). But South Pasadena is in the driver's seat regarding these 20 properties. It must start leading on implementing the state laws rather than passively wait to see what homeowners do.

freeway, which is no longer at issue. Historic designation, starting with the commencement of nomination to historic and endangered listings, is antithetical to affirmatively furthering fair housing in South Pasadena. Historic designation of homes would make them unaffordable and environmentally unsustainable to maintain, cementing the city's 20th century redlining policies into the future.

South Pasadena must complete another draft Housing Element that fully accounts for the vacant Caltrans houses it will buy in the near future, with concrete proposals about how to use these parcels to expand affordable housing. Since the City intends to purchase the vacant homes in the coming months, thus making these City owned properties, we expect to see these parcels listed on the Inventory Site list in the next draft.

100% Affordable Developments. Care First urges the city to actively recruit 100% affordable developments through non-profit low-income housing developers (i.e. bolster its commitment to Program 2.h).[6] We recognize that the City has identified two City-owned sites (9 and 14) as candidates for 100% affordable. (229 & Table VI-50). We propose that the City Council double down on its efforts to identify two more viable locations for a total of four (4) for 100% affordable developments, excluding the Caltrans properties discussed above (which are all slated for affordable housing anyway by statute). Additional sites should be for very low, low and moderate income households combined and provide housing opportunities for families.

Auxiliary Dwelling Units. The Housing Element relies heavily on ADUs to create affordable housing and to further fair housing. But the evidence is thin that encouraging ADUs will be anywhere close to sufficient.

South Pasadena has no system in place to ensure that the ADUs it permits actually become rental units, much less affordable ones. The code states that ADUs are not to be rented for a period less than 30 days, but the City currently has no enforcement mechanism in place to monitor the use of ADUs.[7] It is just as likely that ADUs will become short term rentals listed on apps like airbnb, home offices, and guest houses for visitors. The existing ordinance does not go far enough to ensure homeowners who take advantage of a program designed to increase housing opportunities for those who need housing are using the dwelling as intended by the spirit of State law

Even when ADUs are rented, the data emerging so far suggests that these units are not affordable. (176). Finally, the whole endeavor relies on homeowners investing large sums of money to build these ADUs. Rising inflation may dampen ADU construction.

We recommend that the City pilot an affordable ADU program, like Backyard Homes in Los Angeles. Affordable ADU programs offer free or heavily discounted ADUs to homeowners in exchange for covenants to charge below-market rental rates. The Backyard Homes project, run through LA Mas, offers a few model ADU options and charge discounted construction and design fees in exchange for

[6] The city's previous position was that it would simply work within the San Gabriel Valley Housing Trust to build affordable housing in the region. Care First is encouraged to see that the third draft of the housing element takes a more proactive approach.

[7] It is common for short term rental operators in our city to rent their units for two months at a time. While that complies with the letter of the code, the owners are benefiting financially via an unlicensed commercial short term rental at market rates.

renting to a Section 8 voucher holder.[8] Piloting an innovative model like that could spur ADU construction and support affordable housing and income-diverse neighborhoods.

II. Protections for renters

South Pasadena residents are more than 50% renters. Renters account for most of the demographic and economic diversity in South Pasadena. More than two-thirds of renter-households are rent-burdened, with 64% spending more than 30% of their household income for housing.

The Housing Element sets conservation of existing housing stock as a prominent goal, and contains some general provisions aimed at protecting renters. (220). But monitoring affordable units, offering technical assistance to landlords, and vague commitments to vouchers will not be enough to prevent dislocation and erosion of existing below-market rental units. (220-221). **The City cannot accomplish a goal of preventing tenant displacement without enacting more tenant protections**. Currently, South Pasadena relies almost entirely on Statewide protections set in AB1482. These have proven not to go far enough in protecting tenants from evictions or self evictions due to unbearable rent increases due to current inflation.

The landlords and homeowners have "rent control." When they buy the apartments, the mortgage payment they pay is set for 30 years. It does not change even if inflation happens. Renters are demanding, not even the same stability, just something where their rent remains close to inflation, and the right to stay in their home if they pay their rent.

Landlords are making massive profits on rent. Most "mom and pop" landlords in South Pasadena purchased their apartments 20 to 30 years ago. Over the past year, 13 apartment buildings have sold in South Pasadena at an average of $1.6 million. Meanwhile, the average original purchase price of these 13 apartments was $256,000. Most "mom and pop" landlords are realizing massive profits off people struggling to stay in South Pasadena.

Renters love South Pasadena and want to make it their home just like homeowners. Tenants have a right to be a part of this long-term community and not have to worry if the housing crisis means someone richer will take their place.

No cause eviction protections. South Pasadena Tenants Union and Care First South Pasadena request an urgency ordinance to stem the tide of no-cause evictions expected in early 2023. Building on the progress advocates made with its just cause eviction ordinance in 2019 and its substantial renovations ordinance in 2021, we ask that the City update the law to require landlords effectuating no-cause evictions to provide relocation assistance that goes beyond AB1482.

The relocation amount should be equal to two (2) times the daily pro-rata portion of the tenant's current rent. All units removed for owner occupancy must be held off the market for no less than three years. If an owner evicts a tenant for no-cause because that unit will be taken off the market for owner occupancy, the owner must register the unit with the City as "owner occupied." If the owner violates the ordinance and puts the unit back on the market within the three year period, a $50,000 fine will be levied. Funds collected from fines would support Housing department staff and enforcement staff.

[8] Sam Lubell, Los Angeles Times, March 5, 2021, "Well-designed rentals that L.A. can afford. That's the mission of the Backyard Homes Project." https://www.latimes.com/entertainment-arts/story/2021-03-05/backyard-homes-project-adu-los-angeles

For evictions due to justified substantial renovations, the ordinance should include a first right of return for tenants who do not want to relocate out of South Pasadena. The owner should cover the rent or cost of housing during renovation up to what the tenant was paying for rent at the unit undergoing renovation. The tenant should be allowed to return to the unit at the same rate as was being charged prior to renovation. If temporary relocation due to verified substantial renovation exceeds 120 days, the landlord may terminate the tenancy with the additional payment of relocation assistance as follows: (1) 2.5 times the monthly Fair Market Rent (published by HUD) plus (2) a Moving Expense Allowance of $1,338 (if all occupants are adults) or $4033 (if any of the occupants are minors, a senior, or a person with a disability.

These protections would provide much more support to South Pasadena renters than the municipal code currently provides, and prevent displacement.

Rental assistance. The City currently allocates its CDBG funding to meals on wheels for seniors and sidewalk repairs. We demand that the City initiate a rental assistance program with some of the CDBG funding plus allocate yearly amounts from its General Fund to provide low- and moderate-income residents and prospective tenants to pay security deposits and rent. The program should also offer rental assistance to moderate-income rent-burdened residents. Additionally, the City should pay partial rent for Section 8 voucher holders to make up the difference between rent and the voucher. Because many Section 8 voucher holders in Los Angeles County are unable to secure housing in time and lose their vouchers as a result, the City should help ameliorate this problem by incentivizing and assisting landlords within the City to join the Section 8 program. At present, there is an abysmally low number of Section 8 voucher holders residing in the city (10 total according to the Housing Element). Referring residents to the County (224-25) will not help anyone get into affordable housing when there are no voucher-accepting units in South Pasadena.

Rent control. The City should adopt a rent stabilization ordinance. A local rent control ordinance would give low income and moderate income families, seniors, the disabled and students and workers a fighting chance to stay in South Pasadena. The bleeding out of affordable existing rentals is gradually affecting the diversity of our schools, local culture and economics. South Pasadena being almost an exclusively high rent community, means more transient households that are less likely to support our community health through civic participation and investment in our churches, nonprofits, and schools. With a lack of enthusiasm for building new affordable housing, the City needs do more to maintain the little existing affordable housing we have and protect all tenants from further displacement because of ever increasing rents and cost of living that does not mirror increases in incomes.

This would include, but not be limited to, provisions such as limiting rent increases to no more than 2-6% based on inflation, with the ceiling set at 6%. The ordinance would maintain a floor of 2% allowable regardless of percentage of inflation. If inflation is 1%, rent can be raised 2% The ordinance would apply to all buildings as allowed under Costa Hawkins. If Costa Hawkins is repealed or modified to allow newer buildings, then rent control in South Pasadena automatically applies 20 years after certificate of occupancy.

The ordinance would require a lease term of one year (12 months), and 60-day notices for rent increases. If a unit become available due to an eviction, rent on the unit can only be raised up to 20% of what the landlord was charging the previous tenant. The ordinance should also include the establishment of a local rent control board to establish yearly rent increases, monitor enforcement, and adjudicate tenant and landlord disputes, among other duties

Funding improvements in exchange for affordability covenants. Policies 1.1-1.3 in the Housing Element are focused on improving energy efficiency and bringing older housing units up to code (218). There is a real risk, however, that requiring owners to make financial investments to update older units will result in rent increases, evictions for substantial renovation, and dislocation of low- and moderate income renters in South Pasadena.

We ask that the City provide funding to make needed improvements to make housing units habitable and safe for tenants contingent upon the landlords' covenants not to evict tenants or raise rents excessively once the units are improved. The City has already identified potential funding sources for such improvements. (220).

Thank you for the opportunity to provide feedback. We look forward to participating in the process as it proceeds.

Best regards,

South Pasadena Tenants Union & Care First South Pasadena

- **How addressed:** The City has not made any determinations regarding the eventual dispensation of the Caltrans homes. Currently, the City is doing its due diligence regarding the condition of the homes and the possible financing mechanisms for rehabilitation of the properties. This analysis includes researching possibilities regarding increasing the number of units on Caltrans home sites, where feasible. However, since the due diligence work is ongoing, it is not possible for the City to commit to any course of action regarding these homes at this time. It is the intention of the City to preserve these homes as affordable housing, not as historic resources. The Housing Element has been updated to more clearly make this point.

The Housing Element focuses on encouraging the development of new housing throughout South Pasadena. It is anticipated that sufficient new housing will improve the housing market for both renters and buyers looking to live in South Pasadena.

As shown in Program 2.l, the City has committed to issuing an RFP to affordable housing developers for one of the city-owned affordable housing sites no later than December 2024, and other RFPs in 2026 for the development of housing on these city-owned site.

Program 3.g commits the city to monitor the ~~numberof~~number of ADUs built, and to survey ADU owners annually to collect data on rental rates to determine how many moderate- and lower-income units have been produced. ~~Progarm~~Program 3.h commits the city to modify its zoning code or identify additional affordable housing sites if it is determined that the affordability of ADUs is less than expected in the Housing Element. This survey is scheduled to begin in 2023.

Comments on the 4th Draft Housing Element

Mark Gallatin (December 5, 2022)

I would respectfully like to suggest the following alternate language for that found on page 216 of the September 2022 Draft Housing Element:

Program 1.b. - Convert Caltrans Homes to Affordable Housing

The City will leverage the 68 Caltrans surplus properties that have resulted from the State's cancellation of a proposed route to extend the 710 freeway through South Pasadena to generate capital to create new and rehabilitated, deed restricted, affordable housing units throughout the city. The City has initiated a property sales program for the 710 freeway surplus properties. The City worked with Senator Portantino to pass SB 381 and the emergency rulemaking regulations were released on March 28, 2022. The City will have priority to purchase the surplus properties after the existing tenants. The City has been working with Caltrans to obtain property files and to schedule inspections in order to evaluate the surplus properties. SB 381 also requires that any proceeds from historic properties purchased by the City at Caltrans minimum (acquisition) price and then subsequently sold at Fair Market Value be used to generate affordable housing at a ratio of 3 to 1. Funding has been secured for a feasibility study on the surplus properties that are available to be converted to permanent affordable housing.

Eight-year Objective: Complete a feasibility study and use the recommendations to support decision-making regarding possible strategies, including but not limited to, partnerships with non-profit affordable housing developers, to expand housing mobility opportunities for lower-income households and revitalize underused areas.

Funding Source: Measure H

Responsible Agency: Community Development Department/City Manager's Office

Timeframe: Conduct feasibility study in 2022; technical assistance and work with nonprofits at least annually throughout planning period. More specific timing pending State implementation processes.

- **How addressed:** Program 1.b has been revised to substantially match the proposed language in this comment.

Josh Albrektson (December 19, 2022)

South Pasadena comments:

Downtown Rezoning

They are going to 70 DU/ACre and 60 ft/6 stories which is good. Of note, most buildings need 7 stories to get 70 DU/Acre.

They have a TON of bullshit sites that would never be developed. When Los Angeles did their analysis they got rid of these sites. It is one thing to claim 20% of developable sites will be developed at 100% capacity. It is quite another to claim 100% of a complete downtown would be developed when 30% of the downtown has zero chance of actual redevelopment.

I will be doing a twitter thread on it and there will be EXTENSIVE complaints if these bullshit sites are allowed to be counted. These include multiple official South Pasadena historical monuments, multiple condo complexes that are 15 years old, Historic theaters, Micheal Myers House from halloween, single family homes on 4,000 sq ft lots, 100 year restaurants, 10 foot alleys, historic banks, etc, etc.

Every condo complex built in the last 22 years, every historical monument, all buildings over 70 years old, and all single family homes under 0.2 acres should be removed from the calculations and only the

buildings that ACTUALLY has a chance of development should be counted as 20% likely to be developed.

Inclusionary Housing Ordinance

Their own study shows that 15% is not viable in South Pasadena. They also believe that they can make the 15% Very Low or 7.5% Very low and 7.5% Low.

I have attached an e-mail from the Mission Bell owner to the planning director on Sept 29th stating that his fully market rate project is not currently financially viable. If their fully market rate project is not viable then a 15% IHO is not viable.

South Pasadena should be required to change their IHO to 10% Low OR 5% Very Low and if housing is actually built using the IHO, then they can increase it if they find housing is actually being built, rather than go the other way around.

Especially since they intentionally killed all projects with their 10% Low and 10% Very low which is currently still in place.

Realistic Development Capacity

They are claiming that almost every non-vacant low income site will be built out at 95% Capacity, even though every one is on a primarily commercial street. You rejected Santa Monicas draft for this reason and you have cited multiple cities for this.

Here is Danville:

https://twitter.com/JalbyMD/status/1602454496822497282?s=20&t=qjjmEng2_VMCWagab4n-dw

[twitter.com]In May 2021, before Chris Holden called your director, you had a problem with South Pasadena claiming 80% RDC.

It is completely unacceptable that you guys are allowing South Pasadena to claim a ridiculously high number.

Processing Timelines

South Pasadena has had 4 mid level projects proposed from 2018 on. As of yet, none of them have building permits. It is absolutely unacceptable that you guys say that they can be by right at 20% affordability in order to avoid these processing times.

Santa Monica committed to making all projects that fit the zoning under one acre by right. And they have actually historically produced housing. South Pasadena has not.

I even sent you information about how they required a preliminary application a year before a real application and how they forced 815 fremont to undergo TWO complete redesigns.

In the Housing Element you have a letter from Victor Tran about how he submitted applications in March of this year that South Pasadena hasn't even acknowledged they have been turned in.

South Pasadena was one of two cities to receive a grant from SCAG to pay for objective design standards for all it's multifamily housing. They need to be required that all projects with 10% low be by right.

Something needs to be explicitly written out in the Housing Element with actionable measures to ensure projects are processed. They also need to commit to following the law on the permit streamlining act which they currently regularly violate.

Low Income Sites

You will receive separate more in depth individual e-mails where Gustavo and Megan are CCed with these low income sites and the exact part of the law that are being ignored if these sites are approved. I want to be sure that they will not be able to claim they didn't know that the laws are intentionally being ignored when this comes up in the future.

I did a twitter thread, which I will also submit as a different comment:

https://twitter.com/JalbyMD/status/1602435712846290944?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA

[twitter.com]

Site 2

Just to be clear, two of the biggest buildings JUST GOT LEASED:

https://twitter.com/JalbyMD/status/1602449467042430976?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA

[twitter.com]And I just want to say it is fucking bullshit that Paul thinks I have to prove they are not short term leases. South Pasadena gets to lie about what is leased and that is okay, but when I show that buildings that make the site undevelopable are lease, I am required to get teh leases to show they are not short term leases…..

This is a copy of the exact part of AB 1397 talking about leases that you are choosing to ignore the actual legislation passed by the legislator and signed by the governor and not to apply to this site.

https://twitter.com/JalbyMD/status/1602450748377370624?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA

[twitter.com]

Site 8

There is no replacement site, if they had a replacement site they would have pay millions for the site, they would have to pay millions to build a new public works yard, then they would have to pay to tear down the building and remove the gas tanks, and then after the multi-millions spent, only then could it be offered for an affordable housing project.

Before Chris Holden called your director you actually cared about this site. When I posted it on twitter a developer told me he estimated it would cost "Tens of Millions" just to replace the site and make it available for house.

https://twitter.com/JalbyMD/status/1602444291711844353?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA

[twitter.com]Site 12:

The City doesn't own most of the site. They own 0.19 and do not have plans to buy he rest. Also see Site 15 comment for sites under 0.5 Acre.

Site 13:

The City has a lease going through 2024 for this site. They actually turned down someone who wanted to build affordable housing on this site. They added a single family home that they do not own to get over 0.5 acre.

Site 14:

You ignored almost all the actual laws passed by considering this site.

Link to video:

https://twitter.com/JalbyMD/status/1602446669571727360?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA

[twitter.com]Just to be clear, both homes are getting brand new foundations. They have hired an architect to renovate the homes (Harvest Architecture). This site is under 0.5 Acres. I sent you an e-mail from the owner stating his plans were to renovated the home s(which is actually happening right now.)

This is a link to the part of AB 1397 which was passed by the legislature and signed by the governor that you are choosing to ignore by saying South Pasadena has substantial evidence the current use will be discontinued in the planning period.

https://twitter.com/JalbyMD/status/1602438163506794498?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA [twitter.com]

This is a link to the part of AB 1397 which was passed by the legislature and signed by the governor that you are choosing to ignore by allowing a under 0.5 Acre site to be considered a low income housing site:

https://twitter.com/JalbyMD/status/1602447693690720256?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA

[twitter.com]

Site 16:

Newly renovated grocery store with grand Re-Opening August 3rd. You can read my tweets on it here:

https://twitter.com/JalbyMD/status/1602439866897211393?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA

[twitter.com]They first claimed it was the whole grocery store, then it was just the parking lot, then you guys told them how to lie to you so that the parking lot would be acceptable. Here is a link to the mayor spitballing ideas of how they could lie to you about the parking lot:

https://twitter.com/JalbyMD/status/1602443223150256129?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA

[twitter.com]They got a letter from the owner in the Housing Element which I am sure they wrote what SoPas asked them to write.

Site 17:

I recently received all e-mails from South Pasadena and the site owner. In the e-mails the owner is asked if they are considering housing on the site and he says "I think we are good." When asked if they want to still be on the Housing Element site list, he replies "I guess"

Along with the brand new lease signed this year this is pretty damn good evidence that the owner has no interest in developing housing in the planning period.

Please refer to the above link to the law talking about how leases should be considered.

Programs:

South Pasadena needs specific objective circuit breakers in their Housing Element programs. As mentioned in the call, you can pay a consultant to produce a study proving the highest inclusionary housing ordinance in the state is viable even when it is blatantly not, and that is exactly what South Pasadena did. They cannot be trusted to evaluate their sites in 2024, update the inclusionary housing ordinance, look into reducing parking and open space requirements, or do a realistic rezone if the ballot measure fails. These things need to be spelled out in this housing element so they are enforceable.

Neuroradiologist by night

Crime fighter by day

- **How addressed:** The Housing Element has been substantially revised to address these comments, including increasing the height limit, removing identified sites, and revising the analysis of the DTSP sites to account for additional constraints such as historic designations.

Josh Albrektson (January 2, 2023)

This e-mail is about a South Pasadena low income site on their housing element, and the exact laws that Paul McDougall and Megan Kirkeby are ignoring in allowing South Pasadena to claim this site as

a possible low income site on their Housing Element. I am sending this to you so you cannot claim you did not know this was happening at HCD in the future.

Site 14 is two single family homes. Paul McDougall has an e-mail that the owner sent to the city in 2020 stating he was planning on flipping the homes and selling them.

That renovation is happening right now and Paul McDougall KNOWS that the homes are being renovated. They are currently getting brand new foundations by Foundation Repair LA (https://foundationrepairla.com/ [foundationrepairla.com]). These are the same people who repaired my foundation.

They also have an architect, Harvest Architecture based in South Pasadena that are designing the interiors. https://www.harvestarchitecture.com/

[harvestarchitecture.com]Here is a video where you can see the signs for both of these companies and one of the single family homes getting the foundation as it is being filmed.

https://twitter.com/JalbyMD/status/1602446669571727360?s=20&t=w-Zi8cbwbgVUhWvxqQIHvA [twitter.com]

Here is the part of AB 1397 that Paul McDougall is choosing to not enforce:

(g) (1) For sites described in paragraph (3) of subdivision (b), the city or county shall specify the additional development potential for each site within the planning period and shall provide an explanation of the methodology used to determine the development potential. The methodology shall consider factors including the extent to which existing uses may constitute an impediment to additional residential development, the city's or county's past experience with converting existing uses to higher density residential development, the current market demand for the existing use, an analysis of any existing leases or other contracts that would perpetuate the existing use or prevent redevelopment of the site for additional residential development, development trends, market conditions, and regulatory or other incentives or standards to encourage additional residential development on these sites.

These single family homes are literally being renovated to be BETTER single family homes and Paul McDougall knows this and doesn't care.

But not only that, these sites are below 0.5 Acre. THIS IS SPECIFICALLY OUTLAWED BY AB 1397.

Again, citing the law passed by the legislators and sign by the governor:

(A) A site smaller than half an acre shall not be deemed adequate to accommodate lower income housing need unless the locality can demonstrate that sites of equivalent size were successfully developed during the prior planning period for an equivalent number of lower income housing units as projected for the site or unless the locality provides other evidence to the department that the site is adequate to accommodate lower income housing.

Sites 12 (0.19 acre owned by city) and Site 13 (0.42 owned by the city) Both fall under this category.

--

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

- **How addressed:** Site 14 has been removed from the Housing Element. Site 12 is 0.56 acres.

Josh Albrektson (January 2, 2023)

This is one of a few e-mails you will be getting where I am going to cite a "low income site" that South Pasadena is claiming could be turned into low income housing this cycle and the exact law that specifically outlaws these sites.

Every one of these sites Paul McDougall said was okay in our November 15th meeting.

I just want to be sure that Jason and Gustavo cannot say in the future that they did not know that Paul McDougal and Megan Kirkeby are intentionally not following the laws passed by the legislator and signed by the governor.

I will be sharing these e-mails with every legislator if South Pasadena is allowed to claim these sites, along with the hundred other examples of illegal low income sites that I personally e-mail Paul McDougall about and he approved.

I get that Chris Holden had a personal and urgent phone call with Gustavo to discuss the South Pasadena Housing Element, but that does not mean that HCD should decide not to enforce the laws that are the actual laws.

Site two is a businesspark in South Pasadena. They literally just leases two new businesses this year and these two businesses occupy the entire buildings for two of the 6 buildings.

Check out the leasing brochure. This is high quality offices:

https://images1.loopnet.com/d2/NjuUcEIzCBdbskuj3g5Mj_3zqct3H2jyorx1Mu5ckGw/149161PasadenaSouthPasadenaBrochure.pdf [images1.loopnet.com]

This is from the summary of AB 1397:

This bill would require the methodology to consider, among other things, the city's or county's past experience with converting existing uses to higher density residential development, the current demand for the existing use, and an analysis of existing leases or other contracts that would perpetuate the existing use or prevent redevelopment, as specified.

And here is the actual text from the law:

(g) (1) For sites described in paragraph (3) of subdivision (b), the city or county shall specify the additional development potential for each site within the planning period and shall provide an explanation of the methodology used to determine the development potential. The methodology shall consider factors including the extent to which existing uses may constitute an impediment to additional residential development, the city's or county's past experience with converting existing uses to higher density residential development, the current market demand for the existing use, an analysis of any existing leases or other contracts that would perpetuate the existing use or prevent redevelopment of the site for additional residential development, development trends, market conditions, and regulatory or other incentives or standards to encourage additional residential development on these sites.

Paul McDougall knows these buildings were JUST leased, and he doesn't care. When I told him again that they were leased this year, he asked me to prove they were not month to month leases.

The job of HCD is to enforce Housing Laws, and Paul McDougall should not be allowed to just ignore the laws at his will, and that is currently what is happening under Gustavo's leadership.

--

Josh Albrektson MD

Neuroradiologist by night

Crime fighter by day

- **How addressed:** The Housing Element has been revised to increase the allowable density for Site 2 to further encourage the redevelopment of the site. Furthermore, development standards for this site, as well as all mixed-use parcels, will be revised to encourage redevelopment.

Josh Albrektson (January 2, 2023)

This e-mail is about a South Pasadena low income site on their housing element, and the exact laws that Paul McDougall and Megan Kirkeby are ignoring in allowing South Pasadena to claim this site as a possible low income site on their Housing Element. I am sending this to you so you cannot claim you did not know this was happening at HCD in the future. Site 8 is the Public Works yard for South Pasadena. You can see a video of the yard in this tweet:

https://twitter.com/JalbyMD/status/1602444291711844353?s=20&t=U_d2X2e5GgNUrylao7D03w

[twitter.com]Let me be clear about what South Pasadena is claiming for this site. Sometime in the next 7 years, they will find a replacement site. They do not have any open land right now for this replacement site, but they will find one somewhere. They will then build a brand new public works yard on this replacement site. They will then tear down the old public works yard. They will then remove the gas tank that has been there for decades. They will then remediate any toxins in the soil from this being a public works yard for 40 years.

We are talking about tens of millions of dollars spent before this site could even be considered for low income housing. This site is the kind of bullshit sites that will NEVER be housing but cities like to claim it so they don't have to zone for housing somewhere else.

In the last letter from Paul McDougall, HCD actually explains how the city should lie to HCD in a manner they would be willing to accept.

"For Site 8 (Public Works Yard), the element should discuss the impacts of the underground gasoline tank and filing station and soil contamination on the timing and cost of development in the planning period."

Here is the part of AB 1397 that Paul McDougall is choosing to not enforce:

(g) (1) For sites described in paragraph (3) of subdivision (b), the city or county shall specify the additional development potential for each site within the planning period and shall provide an explanation of the methodology used to determine the development potential. The methodology shall consider factors including the extent to which existing uses may constitute an impediment to additional residential development, the city's or county's past experience with converting existing uses to higher density residential development, the current market demand for the existing use, an analysis

of any existing leases or other contracts that would perpetuate the existing use or prevent redevelopment of the site for additional residential development, development trends, market conditions, and regulatory or other incentives or standards to encourage additional residential development on these sites.

- **How addressed:** The Housing Element has been revised to further describe where the existing uses of Site 8 will be relocated and to address the potential environmental constraints on the site.

Josh Albrektson (January 9, 2023)

I have come across this information from a respected individual. They believe that the density that can be built at 45 feet is about 40 to 44 DU/Acre. The is under 1 DU/Acre per ft of height.

If a City such as South Pasadena wants to claim 70 DU/Acre, they need to have a height limit of at least 75 ft.

- **How addressed:** The analysis of the DTSP area has been extensively revised to address this comment. Revisions include removal of many of the identified parcels from the analysis, and additional considerations regarding the probability of redevelopment of parcels within the DTSP area.

Josh Albrektson (January 31, 2023)

Please consider the following separate comments:

1. Glendon and Meridian from Monterey to the 110 freeway should be included in the Downtown Specific plan and significantly upzoned, especially since they are touching the train station.

2. Monterey Road from Pasadena Ave Southwest should be significantly upzoned. This abuts a mountain, and has very close access to parks and an elementary school and has a lot of run down single family homes that can be upzoned.

3. I like the idea of SB 10 around Fair Oaks and Huntington

4. Consider upzoning Fremont Ave from Monterey to the 110 freeway.

You are actually further away from compliance than you think. HCD has not certified a Housing Element that doesn't have a significant buffer (They recommend 15%) and I doubt you will be the first.

- **How addressed:** The Housing Element has been revised to increase the zoning capacity in all of the areas identified in this comment.

Josh Albrektson (February 1, 2023)

I just read through the staff report for tonight's meeting. After reading through it, I expect that your next draft will also be rejected.

There are two major issues.

In the 4th draft for low income units you were required to have 1155 and you showed 1178 for 23 total excess. That is a 2% buffer. Some of the sites you have will not be allowed, so once you remove those sites you will actually be under the required amount.

To date HCD has not allowed a Housing Element to be accepted without a significant buffer. Most accepted Housing Elements have a minimum buffer of 10% or greater. In their memo on the bottom of page 22 they state you should have a 15 to 30% buffer.

https://www.hcd.ca.gov/community-development/housing-element/housing-element-memos/docs/sites_inventory_memo_final06102020.pdf

I sent a separate e-mail noting the 4 places I would upzone. If you guys do choose to try to submit another Housing Element without a buffer it will be the first issue I raise with them.

The second problem is that you actually need to create programs to affirmatively further fair housing (part 3 in the letter). South Pasadena has yet to actually propose an AFFH program and what is described in the staff report definitely would not be good enough.

San Marino and Santa Monica both legalized 2 to 4 plexes for their AFFH program. If you guys don't want to do that, you can probably get by implementing rent control and stating that allows people to stay in their homes.

And I hope after having been told many many many times that they need to put firm data and specific information in the Housing Element, your staff will realize they need to:

1. Spell out exactly what development standards will be relaxed in what manner

2. Specify what fee reductions and streamlining will be implemented

3. The exact IHO percentage

4. The number of units the IHO applies to

5. The hard trigger that would show if the IHO is effective or not with the change that will be made if the trigger is not met

6. If the city will remove the height limit completely or change the height limit to 84 ft and 7 stories

One thing to note about the height limit. As it stands SB 828 will give South Pasadena another 2,067 units in 2030. If you do a limited height restriction removal, you will have significant problems at that time. And I doubt HCD would give you 2 years to put it on the ballot since you will end up with plenty of warning in the years leading up to it.

Also note that because you are including a lot of historic properties in your Housing Element (Specifically downtown), and your ability to stop a development on these properties is going to be very limited. Anybody who wants to buy the Fair Oaks pharmacy or Rialto Theater and tear it down for apartments can.

I strongly suggest you guys consider what buildings you want off limits, remove them, and upzone a different part of the city you do not care as much about. This could probably even be done after you have a compliant Housing Element.

- **How addressed:** The Housing Element has been revised to increase the zoning capacity to account for a 15% buffer for lower income units and more than a 30% buffer across all income categories.

Josh Albrektson (February 6, 2023)

I cannot make the meeting do that previous commitments. I want to put this comment in the public record. I support all of the zoning changes and programs mentioned on the February 1 city Council meeting by city Council and staff with one exception. I think great progress is being made.

I do believe the historic downtown properties should be completely removed from the zoning so that they cannot be re-developed. I will have a much more extensive letter in support of the housing element once I get back.

It would be great if this meeting was recorded and published.

Also, the staff does not need to respond to my comments on the previous draft due to the fact, I think there will be significant changes on the draft. Please refer to this paragraph and not waste any time responding to previous comments.

- **How addressed:** The zoning changes and programs mentioned during the February 1st City Council meeting have largely been implemented in the Housing Element, as refined during the City Council meetings held on February 9th and 15th.

Josh Albrektson (February 6, 2023)

Just to be specific.

Please withdraw all comments from me that were received after the last housing element was published. If they need to be included in the record please do not feel to respond and refer to this comment saying SoPas does not need to respond.

- **How addressed:** The previous comments are included in this Appendix with brief responses.

Josh Albrektson (February 13, 2023)

I got back from my cruise and listened to the Thursday meeting. I think you guys are doing a great job and I'll do whatever I can to help you get compliance with the zoning.

So this is what I have for my letter that would give you substantial evidence. Once you guys finish your plans, I will add onto it.

https://docs.google.com/document/d/1WJf1YEmjngsUVDaCq3lcy9SIMGx-E3q80K6tCtWeBPU/edit?usp=sharing

I fully believe that with either citywide 4 plexes with right of return OR Transit 4 Plexes with right of return and rent control, you will pass AFFH. I have talked to Anne and you heard from John. If you guys include a program for rent control, you will have a strong letter from the SPTU asking HCD to find you in compliance.

With my letter and SPTU's, I think you should get compliance.

- **How addressed:** The Housing Element has been revised to allow for four-plexes citywide, expect in high fire hazard areas, and to include a right to return policy (Program 6.b.).

Josh Albrektson (February 13, 2023)

So I talked to Matt Gelfand (CCed on email) and told him about my idea for a grocery overlay zone.

It would be to give Ralphs and Vons the same zoning that Pavilions requested, but since they are much less likely than Pavilions to develop in the planning period, only counting 25% realistic development capacity of the maximal density.

So for Vons it would be 3.96 Acre x 140 DU/Acre x 0.25 chance of development for 139 units

Ralphs would be 3.09 acre x 140 DU/acre x 0.25 chance of development for 108 units.

Matt is okay with removing those sites from the banned sites for this kind of zoning and calculation. It is part of your agreement, not stipulation, so it would just require you guys signing a piece of paper.

I also don't think HCD would have a problem with it since the calculation is just like what they have on the top of Page 22 and I will be including it in my letter providing you with substantial compliance.

Alan Ehrlich (February 14, 2023)

Hi Angelica, Armine,

Like you and many others, I would like to see the city submit a HE that can be accepted by HCD with this next go. My general sense from the questions and comments of the special council meeting last week is that members of the council finally seem to 'get it" and are (mostly) ready to accept the additional changes which will be necessary in So Pas's 5th draft submittal.

With that it mind, and in spite of pushback I expect you would receive from certain members of the community, please accept these suggestions for inclusion in this next draft. Like you, I believe we would all like to see this phase of the HE to be done so we can get on to the next part of our lives.

1) Remove the 45 year CHC review from the planning code. According to Mark Gallatin, state law permits the same review and in the 6 instances where a property was reviewed during Mark's term on CHC, all have been approved. This is a gimme.' Effectively, the city is giving up nothing, but to HCD it will appear the city is removing a constraint. CHC will squawk, but by Mark"s own statements, there is no there there.

2) Mark Gallatin corrected a public comment I made about SB 381 requiring 3 housing units for each CT property sold. Mark clarified that this only applies to the 7 historic properties of the 67 lots within our city. In my comment I had said that if the city committed to 3 AFFH for all properties, that would provide a minimum of 60 units, giving the HE the cushion needed for this section. HCD is obviously very aware of the CalTrans properties and the potential they represent to meeting the city's AFFH and RHNA targets. Instead of continuing to battle HCD on this point, allow me to suggest that the 5th draft commits to adding a minimum 3 AFFH for every CT property, regardless of whether the city redevelops the site, partners with an HRE, or sells the site to a private buyer. If the requirement exists for the 7 historic properties, it is not a stretch to apply the same condition to the 20 non-historic properties as well. It does not prevent the city from acquiring and selling the 20 properties, it just provides HCD an assurance that the sale of public land will be used for public housing purposes. Standardizing the rule, respectfully, this is also a gimme, a no-brainer.

3) As a practical matter for the elected members of the city council (and feel free to share this with them), this is perhaps the optimal time to go for broke and submit the plan that HCD will approve. 2022 elections are over, so anything submitted/approved now would not affect Michael or Janet in

2026 and we are stilll far enough from the 2024 elections for it to concern Jon, Evelyn or Jack. On the other hand, if the city continues to fight HCD by submitting bad HEs, there will no doubt be several builder remedy projects filed before 20024 and the voters will remember that when they had the chance, Jon, Evelyn and Jack did nothing and will be held to blame.

4) One final recommendaion, please add a slide to the presentation showing the number, names and $$$ of grants available to provide, restore and rehabilitate AFFH. HCD, SCANPH and SCAG send NOFA's out regularly announcing new programs, many of which I have forwarded to you Given the estimated costs of what it will take to rehabilitate the CT homes, it is only appropriate that the council and members of the community know how many hundreds of millions of dollars the city is leaving on the table by not having an approved HE and not being eligible to apply. It would be the understatement of the year to say the city has neither the funds, staffing or expertise to manage any of the CT properties.

As I've suggested to both of you before, I don't know what the perfect plan is, or even if one exists, but I do know, and you know, that there are a variety of options out there that could work. Its time to get off the crazy train. If the city needs to be engaged with lawsuits over the HE, I'd rather it against the neanderthals holding the city back than CA Homeowners and Chris Suttons of the world. Let the Urquharts, Shanes, Takedas, Carlsons, Gallatins, Nuckols and thier ilk put their money at risk fighting state mandates, rather than making the rest of the city's taxpayers assume the cost of their NIMBYism.

I'm looking forward to seeing you both at tomorrows council meetings. I do not have Grant's email address, otherwise I would have included him as well.

best, Alan

Care First (February 15, 2023)

Re: **Special Joint Meeting of the City Council and Planning Commission, February 15, 2023**

Comment, Agenda Item No. 2, Receive Housing Element Presentation and Provide Direction on 5th Draft

Dear Mayor, City Councilmembers, Planning Commissioners:

Care First South Pasadena is pleased to submit the following comments on the fifth draft of the City of South Pasadena's Housing Element. At this critical juncture where the city stands to lose local control over the development of the city, we strongly recommend the city to adopt the following policies to affirmatively further fair housing, encourage the development of more affordable housing in an equitable manner, and preserve existing affordable housing.

Care First continues to demand:

- A commitment to use the 20 vacant Caltrans house sites, which the City will purchase in the coming months, to develop on site a blend of duplexes, triplexes, quads, and denser multi-unit buildings for affordable ownership and rental opportunities (A number of the vacant houses are 0.25-0.50 acres and could accommodate redevelopment with even more housing units.);
- A pilot affordable ADU program, like the Backyard Homes project in Northeast Los Angeles (https://www.mas.la/affordable-adus); and
- Recruitment of 100% affordable developments through non-profit low-income housing, developers for at least four (4) clearly identified and viable locations for 100% affordable developments, plus spelling out specific financial and regulatory incentives the city could offer such developers.

The City should also adopt the following policies as ordinances with accompanying budget allocations as needed to implement the programs, within six (6) months from the date the Housing Element is adopted:

- Rent stabilization with an 8 percent annual cap for all apartment complexes that have ten or more units;
- Provide tenants the right of return in the event they must vacate their rental units to accommodate substantial renovation or redevelopment; and
- Increase relocation assistance for tenants subject to no-cause evictions.
    - Landlords would be required to pay households at or below 140% of median income for Los Angeles County a relocation allowance equal to two (2) months fair market rent as established by the U.S. Department of Housing and Urban Development (HUD).
    - In addition to the relocation allowance, a landlord must also pay the tenant a moving expense allowance in the amount of $1,120 for adult households or $3,364 for households with dependents, disabled or senior members.
- Offer financial assistance to low- and moderate-income tenants and prospective tenants, including Section 8 voucher holders, for security deposits and rent, by committing to evaluate the city's available funds during each budget cycle and to dedicate a reasonable amount to achieve this goal; Fund improvements at below-market rental units in exchange for landlords' covenants not to evict existing tenants or raise rents excessively.

We incorporate the details of these tenant protections from the South Pasadena Tenants Union comment, dated February 14, 2023.

Additionally, to further the goals of fair housing, the City should"

- Eliminate historic preservation policies and practices—including in ordinances, the Historic Preservation Element, and duties entrusted to the Cultural Heritage Commission—that impede development of affordable housing in the city, especially those impacting the city's transit corridors and Caltrans property sites;
- Review all properties that have been nominated for or placed on the city's Inventory of Historic Resources and/or designated as historic under the city's historic preservation policies;
- Codify the city's Sundown Town Resolution by adopting an ordinance that prohibits the use of historic preservation policies and practices that would cause discrimination or disproportionate economic harm on the basis of race, ancestry, national origin, color, religion, sex, or sexual orientation;

- Upzone currently zoned R-1 (single-family only) to R-4 (allowing for fourplexes) in the city's transit corridors, as identified in previous presentations delivered by the city this month;
- Implement Senate Bill 9 to encourage lot subdivisions and higher density in single-family neighborhoods rather than impede its use.

Best regards,

Care First South Pasadena

- **How addressed:** The Housing Element has been revised to address this comment by: 1) revising the program related to the surplus Caltrans homes and committing the City to add additional units to these properties as ADUs or Missing Middle housing where feasible; 2) adding a new goal and programs related to tenant protections, including a rental registry, right to return, relocation assistance, and rent stabilization; and, 3) committing the City to allow for Missing Middle housing citywide, except for in high fire hazard areas.

Comments on the 5th Public Review Draft Housing Element

South Pasadena Preservation Foundation (March 3, 2023)

Let it be stipulated and acknowledged at the outset that the process for the acquisition and disposition of Caltrans surplus properties in the City of South Pasadena created as a result of that agency's decision not to build a northerly extension of State Route 710 through the city is governed by myriad state laws and regulations, including but not limited to, SB 381 (2021). The purpose of providing the following alternative language for Program 1.b. of the Housing Element is not to circumvent or ignore the requirements of SB 381, an amendment to the Roberti Law, but rather to seek to prevent some very real externalities that perhaps were not contemplated when the legislation was drafted and signed into law, but which nevertheless will cause implementation of the letter of that law to undermine whatever well-intentioned spirit brought it into existence in the first place. These externalities include the inflation of rehabilitation costs created by requirements placed on the City or other Housing Related Entities that private individuals and families are not subject to, making acquisition and rehabilitation by those entities financially unfeasible. Another example of an unintended consequence of the existing law would be the concentration of affordable housing in one or two neighborhoods of the city where the surplus properties are located, rather than a more equitable and dispersed concentration throughout all parts of the city. The South Pasadena Preservation Foundation wishes to see the City promote creation of new affordable housing with as few constraints as possible, so that it has the flexibility to respond creatively and nimbly to a dynamic housing market and evolving community needs.

Program 1.b - Maximize the proceeds from the sale of the Caltrans surplus properties to create new affordable housing throughout the city

The California Department of Transportation (Caltrans) currently owns 68 surplus properties that have resulted from the State's cancellation of a proposed route to extend the 710 freeway through South Pasadena. The City will leverage the 20 unoccupied Caltrans surplus properties, two vacant lots and those of the remaining 46 occupied Caltrans surplus properties that are not purchased by former or existing tenants and use the proceeds from the sales of such properties to generate capital to create new, deed restricted affordable housing units throughout the city, whether on city-owned land, or on privately owned property. These proceeds can serve as a "force multiplier", by unlocking the combined equity of those properties and leveraging it to maximize funding for affordable housing creation and housing element implementation. Several alternatives exist within State law and Caltrans regulations for the City to partner with Caltrans to maximize the proceeds from the sales of the

Caltrans properties and place them directly into a restricted account (i.e. the SR 710 Rehabilitation Account) dedicated solely for the use of the City of South Pasadena to create affordable housing. Some other alternatives, after further study, may be financially infeasible so in order to promote affordable housing in South Pasadena all alternatives, including that proposed here, must be considered.

Eight-year Objective: To facilitate the acquisition and disposition of the maximum number of Caltrans surplus properties to individuals and families and to leverage the proceeds from the sale of these properties to generate capital for the creation of deed-restricted affordable housing units throughout the city to expand housing mobility opportunities for lower-income households and revitalize underutilized areas.

Funding Source: SR 710 Rehabilitation Account

Responsible Agency: Community Development Department/City Manager's Office

Timeframe: Begin implementation of sales program in 2023 and at least annually throughout the planning period until disposition of all surplus properties is complete.

- **How addressed:** The City Council has made no determination regarding the purchase of any of the surplus Caltrans properties or the specific use of any of the properties. The City is still analyzing the financial feasibility of purchasing the properties and the various options for converting them to affordable housing. The City cannot commit to a specific course of action for the surplus Caltrans properties until that analysis is complete. Furthermore, selling all of the surplus Caltrans homes at market rates to generate capital for the creation of deed-restricted affordable housing elsewhere in the city is not an allowable action under SB 381. Staff will explore possible solutions.

Josh Albrektson (March 3, 2023)
Love the Housing Element and I am pretty sure it will be accepted.

I think you guys accidentally didn't include that the IHO would not apply to buildings under 10 units. I would add that.

On the South side of Monterey Road you have Victor Trans Site 3. He has mentioned before that he would like to put about 50 units on the site. I would consider making that half of the road Residential High Density zoning instead of Residential Medium Density. You could also then count Site 3 as 1.26 acres*45 units/acre rather than the 8 above mod units you are counting now. I'm not gonna complain about this but he is going to reach out to you.

The right of return program is also not quite right but that is something that could be worked on later. Here is a LA Times article on it.
https://www.latimes.com/opinion/livable-city/la-ol-gaisford-right-to-remain-gentrification-20180212-story.html

I've read the rest of it and I could not find anything else missing.

- **How addressed:** The Housing Element has been revised to include an exemption to the IHO for developments under 10 units. Site 3 is included in the Ostrich Farm mixed-use area as shown in Figure A-3.b (Page A1-15). This area will allow for densities of up to 70 du/ac. While this site could yield significantly more units once rezoned, the City currently has an application in for this site which indicates that the property owner intends to construction eight (8) above-moderate income units on the site. Therefore, the Housing Element reflects the current development application submitted by the property owner. The property owner will have the option to submit a new development application for a greater number of units once the site has been rezoned. If the property owner chooses to do that in the future, it will increase the City's housing buffer beyond what is included in the Housing Element. Proposed tenant protection programs will be further researched and refined.

Victor Tang (March 5, 2023)
Hi Angelica,

This is Victor Tang, the developer for 181, 185, 187 Monterey Road with 1.25ac land and site #3 in city's site inventory. Our site is vacant and ready for development.

In the special joint meeting on 2/15/2023, Housing Element consultant Mr. Grant Henninger had proposed an Extended Ostrich Farm Zone with 70u/ac density that included Monterey Road. It had the support of planning commission members as Monterey road was wide with all the utilities available. However this zone was not implemented in the latest Housing Element Draft.

Although we have submitted a development plan for 8 market rate units, we are interested in a new development for 50-80 units including low income housing. Current Housing Element's density for our site is 30u/ac. We need a higher density (probably 50u/ac) for a new development to be financially feasible. If the city can give our site a higher density, we can withdraw existing 8-unit plan and the city can count additional RHNA from our site.

Best regards,
Victor Tang,

- **How addressed:** Site 3 is included in the Ostrich Farm mixed-use area as shown in Figure A-3.b (Page A1-15). This area will allow for densities of up to 70 du/ac. While this site could yield significantly more units once rezoned, the City currently has an application in for this site which indicates that the property owner intends to construction eight (8) above-moderate income units on the site. Therefore, the Housing Element reflects the current development application submitted by the property owner. The property owner will have the option to submit a new development application for a greater number of units once the site has been rezoned. If the property owner chooses to do that in the future, it will increase the City's housing buffer beyond what is included in the Housing Element.

John Lawrence (March 6, 2023)

The proposal to allow mult-unit housing anywhere in South Pasadena is a terrible proposal that would ultimately destroy the character, uniqueness and quality of life in South Pasadena. I understand there are concessions that are going to have to be made to the state housing plan but to simply say, "well OK, we will abdicate all control, all ability to self-manage our own destiny is irresponsible and destructive.

Who supports it his dystopian vision of South Pasadena? I'd really like to know. I suspect it is a purely political position being pushed by people who have no history, no investment, emotional or otherwise, and life connection at all to the city. Must be nice to look in from outside and advocate destruction when it doesn't affect you.

- **How addressed:** The comment misstates what is being proposed as there is not a proposal to allow "multi-unit housing anywhere" in the city. The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023.

Samuel Lin (March 6, 2023)

Dear whomever it may concern:

My wife has grown up in South Pasadena since she was a young little girl and I have since just moved been a resident for about 5 years. South Pasadena has always been known to be as a quaint small town everyone knows each other.

Until recently, there's been a lot of traffic, kids have been stuffed in schools. Even our own small elementary school in Marengo has a waiting list for the very same people who would live on the same street.

This proposal is not only going to bring in more congestion and traffic, it is going to change the very nature of our small city. We don't have the capacity to fit medium density because we eliminated the 710 freeway, we have a lot of traffic on Fremont. Also, you're going to turn our small beautiful city in a dense packed traffic, terrible place. I strongly urge you to reconsider the elimination of single family zoning, we do not need dense housing in this city, we cannot handle the traffic and we don't have the resources.

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals. The policies and programs in the Housing Element fulfill those requirements. The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023.

Ed Donnelly (March 6, 2023)

City Planning staff,

It has come to my attention that the latest draft of the Housing Element includes the elimination of zoning for single family homes citywide as well as a proposed building height limit increase to seven stories.

This will significantly impact the very things that define living in South Pasadena. Over the past several years I have worked side by side with fellow residents to secure city revenue through the UUT and the increased local sales tax. We have worked diligently to secure and sustain funding for our schools and our public library. Those campaigns, while a tremendous amount of work, were ultimately personally rewarding for our volunteers because what we were truly campaigning for was sustaining our way of life here in South Pas. And voters here in 91030 overwhelmingly agreed with us

in every case. This is much the same as the generation before us fought tooth and nail to prevent the 710 freeway from tearing the town asunder. And despite all of this an existential threat now looms unnecessarily.

I fully support responsible development and the building of affordable housing here in South Pasadena. There are sensible options. In addition, I completely understand the demands of the HCD and the consequences of not complying with them as we are already seeing with the project on the Shaker's property. Embracing strategies that will immensely impact our police and fire departments, infrastructure and schools while drastically reducing tax revenue due to diminished property values isn't just simply foolish, it's irresponsible governance.

I urge you to find another way to realistically meet the RHNA numbers without destroying the fabric of our way of life here and dooming the city to be just another banal concrete wasteland on the edge of Los Angeles.

Ed Donnelly
1935 Edgewood Dr.
SOUTH PASADENA

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals. The policies and programs in the Housing Element fulfill those requirements. The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023.

Delaine W. Shane (March 7, 2023)
Dear Community Development Department Staff and Management:

The fifth version of the Housing Element is insufficient. Furthermore, it does not adequately address legitimate questions and concerns that I brought up in my earlier comments on the previous versions. As a professional environmental planner with decades of experience, I know when I've been "blown off." So, my original comments stand and are part of today's comments to you. My intent is for you to reconsider some of the policies and make them more nuance or simply more limited in your approach and understand the underlying ramifications of them including financial burdens that will be placed on our city.

This whole process has been messed up. The housing element should have been part of the general/specific plan update. Now, it is not. When the CEQA process (environmental review) is finally undertaken for the plans, it's very essence has been destroyed. Since the housing element will be approved, it can not be modified during the general/specific plan environmental analysis. Even if the housing element causes significant environmental impacts as determined in the general/specific plans EIR, there is little recourse of modifying the housing element to lessen such impacts unless the council modifies the housing element itself. And that of course will not happen. The council won't do it and who will be paying for potential mitigations? It won't be the developer that's for sure. "Little things" like upgrading the Fire Department's capabilities to reach high rise fires, new and/or more expensive water supply sources to meet the needs of new housing units not to mention how water pressure can be created for such high rises, etc. It will be on the residents and businesses of this small city.

You can say that the issues of infrastructure, traffic, water supply, etc. is not a requirement of the housing element. That it will be part of the plan updates. But, really, they are all interrelated. So, maybe HCD doesn't care about our aging and inadequate infrastructure and public services, but the City governance needs to address these issues and plan on how to fix them NOW. And, that includes the financing of such improvements! "Kicking the can" down the road is irresponsible. What happened to the wishes of over 1,000 residents who initially participated in the general/specific planning process when David Watkins was the Planning Director? Residents had participated in that process for months and brought up reasonable growth scenarios of somewhere between 700 and 1,000 new housing units that could be accommodated in the next 20 years. The delays and the petty politics created what we now face. Credit of this latest fiasco is given to the planning consultants (all including the current one) that have failed to please HCD several times before. This version will probably be the one that HCD approves of because the consultant has given everything that the agency demands. The consultant should be responsive to our community and not have hidden YIMBY agendas. He doesn't even live in this region.

He indicated that we must accept SB 381 (Program 1.b-page 254). That is misinformation. Documented evidence has already been supplied to you that the side-by-side escrow can work and has been done before without implementing SB381. Many of my neighbors and I continue to support the return of the Caltrans housing to current/former Caltrans tenants or qualified buyers who will purchase these properties, fix them up, and live in them, and thereby add to the property tax base and contribute to the neighborhood's charm. Our neighborhood already has dense housing and our existing infrastructure is in terrible condition. Affordable housing as described in the housing element needs to be distributed in various areas throughout the City. It is also states that the City WILL construct ADUs on these parcels. First, it should be the homeowners' decisions as well as the practicality of building anything on some of these small parcels. Second, the "City WILL build" presumes the City owns the properties outright, and that would be a terrible mistake. Where is the funding for this? There are many problems with our existing infrastructure that equally need to be addressed but have been ignored due to a lack of funding. Or, at least that is what we have been told over the years.

For the special needs program (Program 2.h-page 263): The housing element states: "Eight-year Objective: Encourage construction of at least 50 accessible units, 50 units with three or more bedrooms, and 50 units affordable to lower-income households to reduce displacement risk and expand mobility opportunities in areas in close proximity to transit systems, commercial uses, services and amenities on appropriately designated sites within the Downtown Plan area, the Fremont Avenue/Huntington Avenue/Meridian Avenue neighborhoods, within properties identified for mixed-use potential, vacant higher density residential sites, City-owned sites, and underutilized non-residential properties." Are these related to the Caltrans housing? Or is this separate? There is no Huntington Avenue, it's Huntington Drive (it figures for a consultant that doesn't live here). Why isn't Fair Oaks/Mission/El Centro considered as well?

He indicated that we must comply with SB 10. Page 268 has a policy that states: "Policy 3.5: Provide objective standards and ministerial application processes to implement 2021 State housing legislation (SB 9 and SB 10) that requires the City to permit construction of two dwelling units on single-family lots and allows density increases for multi-family properties up to 10 units with a CEQA exemption." SB 10 is strictly voluntary and it is my understanding that the council had publicly backed away from supporting this previously. Why, therefore, is it in this housing element version?

For the height limitations policy (Program 2.n-page 267), why is the City so inclined to place so many limits on itself at this time? By having so many YIMBY restrictions and conditions, the will of the people that live in this City is being curtailed. This is clearly undemocratic and thwarts local control. Clever architects and innovative developers can create smaller housing units within our currently defined building height limit. But, apparently that isn't even considered in this version of the housing element.

For rezoning (Program 3.a-page 268), do the residents really know that you are proposing to rezone their properties in this fashion? The way this housing element has been advertised, you must know that most residents are unaware. As a cautionary aside, I remember traveling to Sedona, Arizona to view the red rocks over the years. Just before the pandemic, my husband and I took our then teenage daughter to Sedona. It was a disaster! Where once it was a sweet town with some tourists, it was now a complete zoo and utter chaos. Turned out that the State of Arizona had permitted opportunities for the Airbnb-type businesses and there would be no local control. In time, developers had bought up many, many houses and used each bedroom to rent short term to tourists. Local schools were impacted and at least one had closed because the population had shifted from residents to tourists. And the sites themselves had been compromised by such heavy influx. We can't correct a national crisis in housing by destroying our community. It's just a 3 ½ square mile city. The rezoning needs to be more nuanced than what is now being proposed. It is too much.

For mixed use (Program 3.b, page 268) developments and adaptive re-use, such tall buildings and limited to no parking, we might as well become either Glendale or Pasadena Annex. The height of the buildings alone question the ability of the Fire Department to respond to high rise fires, as well as the necessary water pressure to support fighting fires or having operational fire water sprinklers. Parking availability? Most people do not rely on the Gold (L) Line to get anywhere except perhaps to go to special events. The Mission/Meridian garage was noted years ago in a L.A. Times article that people were parking there from elsewhere to do shopping. Few to none were actually parking to use the Gold Line for work outside of South Pasadena. Families with kids or elderly relatives will still need cars whether gas- or electric-operated. Parking is going to be worse (not a CEQA issue but a real life experience nonetheless).

For demolition of vacant properties (Program 3.c, page 270), how does this program relate to the Caltrans housing? Does the program mean that automatically if a vacant Caltrans housing is "viewed" as not fixable, it will be torn down and replaced with three units at that site? Many of the Caltrans vacant properties are small and located on hills where soil stability may be an issue.

I do not support Program 3.d, page 271 (Enable Parcel Assemblage) as currently written. It emphasizes a strong and lopsided City-developer partnership when maybe the homeowner doesn't want to sell their property. There has to be support for the property owner as well. Forcing the property owner to sell their property would in turn create hardship for that resident. Home prices and mortgage rates are too high now and in the foreseeable future and so that property owner would not be able to resettle elsewhere in South Pasadena. That is outrageous. And your consultant never answered my question as to whether eminent domain would be invoked if the property owner was unwilling to sell.

Program 3.h, page 274, states that if the ADU numbers fail to materialize that MORE rezoning will take place! There are many reasons why people don't want to or are unable to build an ADU. But, regardless, if this magical number doesn't happen, we will be further rezone? Just how many people are we going to have here in a 3½ square mile area? Has that been calculated? Again, the financing for this unlimited rezoning journey? The schools? The streets? The water? This is ridiculous. Why

not just obliterate the zoning and put out the welcome mat for hordes of people? Watch the tax base shrink further because there will actually be fewer property owners. Floating bonds? Reducing municipal services? But, yes, make the YIMBYs happy. Whatever happened to responsible planning and considering possible future scenarios and costs?

I could go on, but I end with a plea. Look at the policies, each one very carefully. Are they really helpful to the residents and can they be financed and monitored in a productive and positive way by the City? Or, are they just offerings to appease YIMBYS? The financing must also be considered seriously.

Most of us agree to responsible and sustainable growth in the next eight years. I personally witnessed that with the individuals I met at the planning charettes years ago. Before you rush off this version to HCD, please review the policies individually and responsibly. Edits are needed to ensure sustainable growth.

Thank you,

Delaine W. Shane
2003 Meridian Avenue

- **How addressed:** The lawsuit brought against the City for failure to comply with State Housing Law caused environmental evaluation to be completed pursuant to Government Code Section 65759. The Housing Element is not subject to environmental review at this time. The City is preparing an Environmental Assessment that will be considered at the time of Housing Element adoption in accordance with applicable laws.
- **How addressed:** The City must follow SB 381 regarding the purchase and dispensation of the surplus Caltrans properties. The other options suggested in the comment are not legally valid. Per the March 7th draft, Staff will explore possible solutions.
- **How addressed:** Affirmatively Furthering Fair Housing (AFFH) is a requirement of the Housing Element under state Planning Law. The City is not opting into SB 10 citywide, but instead is using the framework of the law to create the Missing Middle Housing program to achieve the AFFH goals. The program will have specific objective design standards to allow certain housing types that are consistent with existing residential character.
- **How addressed:** The current height limit is a constraint on development. The City must eliminate identified constraints on development. HCD has questioned whether a building could be designed at 70 du/ac or more with a 45 foot height limit. The action taken through the Housing Element adoption does not eliminate the existing height limit or create a new height limit. The Housing Element establishes a program for the voters to decide whether to establish a new height limit to achieve the densities required to meeting the RHNA housing goals. If the voters do not increase the height limit in certain areas, other zoning-based measures (such as conversion of current low density areas into higher density areas) will need to be analyzed and submitted to HCD for review.
- **How addressed:** The City held three public meetings, on February 1st, February 9th, and February 15th to discuss the proposed zone changes to allow for missing middle housing.

Kristine Kwong (March 7, 2023)

I am requesting the City change the section of the housing element to limit the area that allows four-flex parcels on major traffic corridors only or near the Metro station. Since the City has a voter imposed height limit, I suggest removing the mention of 7-10 story building that are above the current limit until the time the voters have had a chance to consider this issue.

- **How addressed:** The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023. A revised height limit must be stated for certain parcels that allow for 50 du/ac or more must be included in the Housing Element to state what the minimum new height limit will be if the voters elect to remove the existing height limit. The recommended height limit change only applies to those specific areas. The action taken through the Housing Element adoption does not eliminate the existing height limit or create a new height limit. The Housing Element establishes a program for the voters to decide whether to establish a new height limit to achieve the densities required to meeting the RHNA housing goals. If the voters do not increase the height limit in certain areas, other zoning-based measures (such as conversion of current low density areas into higher density areas) will need to be analyzed and submitted to HCD for review.

Peter Giulioni (March 7, 2023)
Dear Armine,

Hopefully this finds you and your family continuing to be safe and healthy.

This is an out-reach from a SoPas community member, rather than a commissioner, so, please consider it through that lens.

Recently, it has come to my attention that the latest draft of the Housing Element includes the elimination of zoning for single family homes citywide as well as a proposed building height limit increase to seven stories. Is my understanding correct?

While I'm a relative new-comer to SoPas (I moved here with my family in 1996) I believe this will significantly impact the very things which define living in our community.

Over the past several years I have worked side by side with fellow residents to ensure passage of the UUT and the increased local sales tax. We worked to secure and sustain funding for our schools through SPEF initiatives, and even our public library. While a tremendous amount of work, it was/is personally rewarding for us as volunteers because we were truly campaigning for sustaining our way of life here in SoPas. And please note, I used the word "sustaining" not "protecting" - I am a proponent of thoughtful and conscious growth and expanded thinking. The advocacy of many of my SoPas neighbors can be seen as a continuation of the spirit shown by the generation before us who fought to prevent the 710 freeway from bisecting our town.

While not completely conversant around the demands of the HCD and the consequences of not complying with them; embracing potential solutions that will impact our police and fire departments, infrastructure and schools while potentially reducing tax revenue due to diminished property values seems counterproductive at best and irresponsible at worst.

Please consider this a "formal" request that you direct the city staff to find another way to "meet the numbers" without negatively impacting the very nature of our way of life here in SoPas. I believe we are special in so many ways, and don't want to see us become yet another "characterless" wasteland on the edge of Los Angeles.

As always, please feel free to reach out for more information or clarification.

Stay safe and healthy, warm regards, Pete

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals. The policies and programs in the Housing Element fulfill those requirements. The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023.

Leonard Mlodinow (March 7, 2023)

To whom it may concern: I just heard that the latest draft of the Housing Element includes the elimination of zoning for single family homes citywide as well as a proposed building height limit increase to seven stories. I feel strongly that this would have an enormous negative impact on our community and that it is not in character with what I and my neighbors understand and appreciate as South Pasadena. I hope you can illuminate those changes from the plan.

Leonard Mlodinow

Brian Bright (March 7, 2023)

Hi Council,

Living in South Pas has been a great experience. This city has a long history of preserving its identity, history, and way of life. South Pasadena was bisected in the 40's by the 110 and the people said "never again" to be pushed around by Sacramento, so they fought when the 710 expansion was going to decimate the city by splitting it into fourths with the 110. South Pasadena prevailed, thankfully, or this city would have been split up.

Now the overlords in Sacramento want to control our town again, adding an unreasonable amount of new construction due to a blanket law that pays no attention to the amount of apartments vs single family homes in each community. South Pas is almost evenly split with rentals vs single family homes, unlike many of our neighboring cities (looking at you San Marino). To make things worse, we have paid shills for the development industrial complex who have infiltrated our town and are on social media complaining about a lack of housing ad nauseum, all the while living in their affluent single family homes. How this expansion of units effects our schools, infrastructure, and way of life is never discussed in a logical debate.

Unfortunately, city council did not fight hard enough against the state punching down a few years ago, and here we are. 10 story buildings in South Pas, our of historic homes being able to be 4 plex apartment buildings...seriously? Lets fight now to preserve our town, we owe it to those who fought the good fight in years past and to every homeowner in this city!

Sincerely,
Brian Bright

- **How addressed:** The City has a requirement to address issues related to Affirmatively Furthering Fair Housing and to accommodate the number of homes allocated to it through the Regional Housing Needs Allocation process. The policies in the Housing Element fulfill those requirements.

Donna Scott (March 7, 2023)
To whom it may concern:

The new zoning proposal for South Pasadena is unacceptable.
Eliminating zoning for SFRs, as well as increasing building heights to 7-10 stores will completely change the character of our town.
Also, there seems to be a movement to push through this HUGE change without much discussion, or publicity.
I would request slowing the process down, making details known through local papers etc.,in order to get more input and allow for the proposal of different options.

Thank you.
Donna Scott

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals. The policies and programs in the Housing Element fulfill those requirements. Since May 2020, the City has held several community input sessions and recently held three: City Council meetings, on February 1st, February 9th, and February 15th (Joint Meeting with the Planning Commission) to discuss these changes. The City has a court-imposed timeline for responding to HCD's comments, which necessitates the speed with which the City is acting on these policies. Additionally, the City has a page dedicated to the Housing Element where all updates have been posted.

Bruce A. Finstead (March 7, 2023)
We are writing you because we fear that South Pasadena's approach to the state mandated Housing Element requirements may destroy the small-town atmosphere of the city where our family has lived since 1971. We are well aware of the NIMBY potential of our comments and the difficulties you have in balancing the desires of our small community with the societal need to provide additional affordable housing for California residents. We further realize the frustrations of dealing with regulations that may well not take into account the divergent needs and desires of small vs large communities.

Of paramount concern to us is the proposal to eliminate single family residential zoning throughout the city. Among the many characteristics of our city that make it special are its neighborhoods of people living next to one another in single family homes. Neighborhoods have people with bonds developing over years; this cannot occur if multifamily dwellings with relatively short-term residencies are intermingled with homes of families living there for years, or even generations. Expanding the areas or corridors where multifamily residences are allowed is not the ideal situation, and may be necessary, but to eliminate single family residential zoning for the entire city should not even be under consideration.

South Pasadena does not have much undeveloped land; it may well be necessary to go up rather than out to obtain more developable space; raising the building height limits may be aesthetically undesirable, but it may be a necessary concession to the state. It might be more tolerable if mixed use buildings were required with businesses on the ground floor and residences above. Is it possible to provide financial incentives to current "tall" building owners to convert their buildings to mixed business/residential use?

Thank you for your consideration. If you wish additional input from us, we would be pleased to provide it.

Michael Girvigian (March 7, 2023)
Hello,

As a longtime resident of South Pasadena, I urge the city staff to significantly re-think the latest draft of the city's housing element.

I understand there is a statewide mandate to increase housing, which is several years old now.

This statewide mandate, however, was made at a time when the projected state population by 2040 was 50 million people.

The population growth has stopped, and the state population is shrinking.

The state's population could remain stagnant for the foreseeable future.

There are a number of reasons for this, which include: increased out-migration, reduced immigration, low birth rates.

Future mass transit ridership adjustments are already underway based on new projections of shrinking population growth.

High speed rail update gets closer to reality, but major risks remain
https://www.masstransitmag.com/rail/news/53027098/ca-how-many-people-will-use-californias-bullet-train-planners-lower-ridership-estimates
High speed rail update gets closer to reality, but major risks remain

Thus, destroying the quality of life of the people in small towns, in the name of an outdated mandate, is not fair or equitable.

I urge the city staff to re-think this latest draft of the housing element.

Sincerely,

Michael Girvigian

Cathleen Hoadley (March 7, 2023)
I've been made aware that the latest draft of the Housing Element includes the elimination of zoning for single family homes citywide as well as a proposed building height limit increase to seven stories.

I can't even imagine South Pasadena suddenly having a skyline with buildings higher than four stories; it will completely change our little town. The other issue is that we have neighborhoods with single family homes, and also certain parts of town with high density apartment buildings, and then there are some areas with a healthy mix of both, but none are higher than four stories.

My neighborhood of Buena Vista/Foothill/Prospect/Meridian/Highland/Fairview, nestled between Fremont on the east, Orange Grove on the West, and just north of the 110 freeway (Foothill) and bordered by Columbia on the north, has no apartment buildings at all; if someone were to purchase a home, and raze it, and put up a multi-unit apartment building, that would completely change the nature of the neighborhood I have been fortunate to live in for the past nearly 23 years. I have neighbors on all sides who have lived on Buena Vista for coming up on 50 years. These are the people who fought the 710 extension which would have ruined South Pasadena forever. I know many people are creating ADRs, which are welcomed, but perhaps not enough.

Please be mindful of how being able to construct a new apartment building with four units in the middle of a solely single family neighborhood will drastically impact the nature of these traditionally single family home neighborhoods.

Thank you,

Cathleen Hoadley

Sandy Kitto (March 7, 2023)
To: The City of South Pasadena

As long-time residents of the city, we reviewed the current draft of the City of South Pasadena (City) 2021-2029 General Plan Housing Element with concern. The elimination of single-family zoning, and the height limitations for multi-family residential units reaching 7-10 stories would negatively impact the appearance and personality of the city that attracted so many residents like us.

These concerns are as follows:

- The universal elimination of single-family zoning is short-sighted in allowing up to four units being built on a single parcel anywhere in the city. Many parcels in the city, such as our house on Bonita Drive, would be challenging if not impossible to accommodate four units, yet that would be permitted. The construction would create unimaginable chaos for the neighborhood, and a parking nightmare afterwards.

We suggest that a parcel size requirement be included that would limit this expansion to parcels that could reasonably accommodate the units and parking for the residents.

- The current plan eliminates the requirement for parking for any construction within a half-mile of mass transit, most likely the Gold Line at Mission Street and Meridian Avenue. Imagining multiple seven story buildings in that neighborhood, would create mammoth parking issues. Just because people live near the Gold Line does not mean they work in an area serviced by the Metro. And even if that were the case, it does not eliminate the necessity of having a car in the Los Angeles metro area for errands and weekend travel. Even the grocery stores on Fair Oaks Avenue may exceed the resident's willingness to remain pedestrians while carrying groceries.

So many of these residents will still have vehicles clogging the limited parking available. This potentially would impact the merchants along Mission Street by blocking customers from accessing the area.

We suggest reducing the height restriction (and thereby the number of units), AND requiring parking accommodation be part of the project.

- From an aesthetic point of view, allowing new construction of 7-10 stories is a dramatic change from the current situation in the city. A sudden influx of 7-10 story buildings would forever alter the landscape of South Pasadena; blocking mountain views, casting huge shadows on adjacent parcels, and reducing the charm of the neighborhood. The Eclectic Music Festival, and semi-annual Arts Crawl would be a completely different "vibe," as would daily living.

We suggest limiting the height maximum to a more reasonable 4 stories to maintain the City's appeal.

For these reasons, we urge the City leaders to reconsider the plan as currently proposed.

Sandy Kitto and Joe Walters
911 Bonita Drive
South Pasadena, CA

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals. The policies in the Housing Element fulfill those requirements, as well as incorporate other state requirements such as elimination of parking requirements in close proximity to transit. The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the City. This revision was released for public review on March 7, 2023.

Sally Kilby (March 7, 2023)
To Whom it May Concern:

One change I would request is that buildings of up to a fourplex be limited to parcels on such major traffic streets as Fair Oaks, Huntington, and Fremont, and to those near the Metro South Pasadena station. I would also recommend excluding mention of 7-10 story buildings since South Pasadena has a voter-imposed building height limit. Citizens can be asked to vote on this at an upcoming local election.

Sally Kilby
City Clerk, Retired
1000 El Centro Street
South Pasadena

- **How addressed:** The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023. A revised height limit for parcels that allow for 50 du/ac or more must be included in the Housing Element to state what the minimum new height limit will be if the voters elect to remove the existing height limit. As to the actions regarding the height limit, indeed the action taken through the Housing Element adoption does not eliminate the existing height limit or create a new height limit. The Housing Element establishes a program for the voters to decide whether to establish a new height limit to achieve the densities required to meeting the RHNA housing goals. If the voters do not increase the height limit in certain areas, other zoning-based measures (such as conversion of current low density areas into higher density areas) will need to be analyzed and submitted to HCD for review.

Linda Poore & John Poore (March 7, 2023)
I have lived in South Pasadena for 47 years and taught many years at all 3 elementary schools. This community is filled with many creative innovative people who have solved many problems over the years including The 710 freeway corridor , library funding, numerous tax raises to improve services, etc. It's time to find solutions that involve input from many residents, including reviewing how other small communities are complying to the new requirements. Please feel free to contact me at any time.

The City must then demonstrate plans which can accommodate these three housing goals. The policies in the Housing Element fulfill those requirements.

Mike Mitchell (March 7, 2023)

As a new owner of a single family home in South Pasadena I have serious concerns about the changes being suggested by local and state government. I am understanding of the need for more units and lower income housing to create more access to housing for a wider range of individuals, but the changes are too extreme and will have deleterious effects on the community.

As someone who has spent over a year waiting to get planning permission, I understand that the city takes very seriously the cohesiveness of neighborhoods and how that cohesiveness affects home ownership for us all. Suggesting that it is acceptable to go from areas entirely comprised of single family homes to suddenly giving large investors the right to build complexes over 7 stories high is incredibly extreme. Even tempering this suggestion to complexes of 3-4 stories would have an impact, but would be understandable given the state mandate for increased housing. People have invested huge sums of money in their home here to live in what feels like a special community. We want more people to have access to it, but not at the expense of damaging those people's investments.

It may seem callous to talk about investment in a community in financial terms, but those investments are people's future stability, and in Southern California represent a huge portion of a person's material wealth. It is even more callous to wantonly disregard how difficult home ownership is in this state by diminishing people's values and subsequently their future stability.

Change is needed in order to bring new, lower income families into this city, and more of them. Change should however, be brought about in ways that do not damage the existing balance in the community but rather improve it. I would like to think that the very intelligent members of our local government can find a way to bring about the changes we need while preserving what drew people to this community to begin with.

thank you,

-Michael Mitchell

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals. The policies in the Housing Element fulfill those requirements.

Keith Tsang (March 7, 2023)

Hello,

I would request the city change the following section of the housing element to limit the area that would allow up to a four-plex to parcels on major traffic corridors only, like Huntington, Fremont and Fair Oaks or near the Metro station. Also, since the city currently has a voter imposed height limit, I

would recommend removing the mention of 7-10 story buildings that are above the current limit until such a time when the voters have had a chance to weigh in on this.

Keith Tsang
1440 Indiana Ave

- **How addressed:** The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023.

Nicholas Greco (March 7, 2023)

The city's infrastructure cannot handle the additional volume of residents should the four Plex allowance be authorized. Homeowners pay the majority of taxes and this will lead to an undue burden on the homeowners of South Pasadena and a decline in the quality of schools and city services that we all cherish. State mandated ADU add ons that are rentable will bring in additional residents while also allowing for increases in property tax revenue by the homeowner. Please don't disrupt our way of life and diminish the quality of our quaint town. We hope that the City Council considers this as they were elected to protect the way of life that South Pasadena homeowners and residents have come to appreciate.

Sincerely,

Nicholas W Greco MD, FACEP
Operations Director

Huntington Hospital

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals. The policies in the Housing Element fulfill those requirements.

South Pasadena Tenants Union (March 8, 2023)

Dear Ms. Becker and Ms Fausto:

South Pasadena Tenants Union leadership are pleased to have reviewed the March 2nd, 5th Draft of the Housing Element. It was/is a bold and expansive housing element, one which might even be the best in the Southland. We applaud staff for the inclusions of the tenant protections and the acknowledgment that preserving affordable housing is a priority in this process. We look forward to working with the City, the residents of South Pasadena and the Council to ensure that these policies are the best that they can be and are enacted effectively and within a timeframe that is beneficial to those whom they are intended to protect: the 53.5%.

We are however surprised to learn that as of last night, the original draft of March 2nd has already been substantially revised and without any published responses/comments indicating public input. In reviewing the March 7 redline version, we are disappointed to see that the proposed program addressing the fate of the CalTrans homes and the implementation of SB381 has changed drastically from the March 2 version. It is our understanding that there are no legal alternatives to SB381 and therefore we are stymied by this latest change.

With regard to the revision indicated by the March 7 version for citywide fourplexes, also significantly different from the March 2nd draft, we find that we can remain wholly supportive of the current proposed change with a modification. We can support triplexes and fourplexes being limited to the high transit areas but we will need the City to commit in the Housing Element to a rent stabilization ordinance that is fully enacted no later than June 2024. Therefore, our one public comment regarding the most recent March 7 version of the 5th Draft Housing element is below:

> *For program 6.d, SPTU asks that you include within the 5th draft a deadline of no later than June 2024 for implementation of a rent stabilization ordinance.*

South Pasadena Tenants Union looks forward to seeing our input included with the expediency that other revisions have been made in the last few days so that we can comfortably and wholeheartedly commit our support of the 5th Draft to HCD. We appreciate and trust that staff will do as proposed, but will need to see good faith that the City weighs our input equally to that of other influencers in the community by including our abovementioned request.

If you have any questions or would like to discuss, I look forward to hearing from you. I can be reached Anne Bagasao at eabagasao@hotmail.com or by phone at 626-660-8837.

Sincerely,
Anne Bagasao, Co-Founder

- **How addressed:** The timeframe for Program 6.d requires that City Council consider a rent stabilization ordinance no later than December 2023.

Jenny Bright (March 8, 2023)
Very well said!! I am in agreement that we need more affordable units. It is the heavy hand of Sacramento overriding local control with threats that is not in the spirit of South Pasadena. Rezoning is the wrong direction. There are still locations in town to add affordable housing that we can support financially without having to erode the entire character of the City. We already have >50% rentals here so it is not as if we are out of balance.

On Wed, Mar 8, 2023 at 8:15 AM richard schneider <rdschneider0@yahoo.com> wrote:

> I am certainly in favor of the city having a mixture of housing for different income levels. We need more units for low and moderate income levels. When I and my wife moved here years ago we were low income renters. But I think the provisions suggested for the new Housing Element, however well intentioned, are going in the wrong direction. What is needed is state subsidies for affordable units distributed throughout the city. Some of that subsidy money could be obtained by market rate sale of Caltrans properties. There are thousands of Caltrans properties around the state which could be utilized.

Dan Evans (March 8, 2023)
Ladies and Gentlemen:

I believe it may be a mistake to treat this issue as normal, administrative "compliance" with properly-enacted state law. In reality, we do not face normal legislation in SB 9, SB 10, etc. What we face is an attack on the way of life we choose to live in South Pasadena. Big-government social activists have seized the single-party government in Sacramento for a social revolution – to eliminate the middle class by removing our choices on how we live. We choose to live in single-family homes with gardens, not in massive housing projects as the social revolutionaries in Sacramento insist.

Confronted with a social revolution, "compliance" is a weak, conciliatory approach which will further empower the social revolutionaries. South Pasadena led the way against big-government plans to build a freeway through town, we should also lead resistance to these Big Brother housing efforts. Our resistance will lead to litigation; eventually cooler heads in court will see that SB 9, SB 10, etc. constitute a "taking" of property without due process. (fyi – I have taught Constitutional law.) We must stand up for the way of life we choose to live, not cave to big-government activists!

Felix Gutierrez (March 8, 2023)
Dear South Pasadena City Leaders:

I understand that an elimination of Single Family zoning in South Pasadena has been proposed and is being considered by the city government.

Please register my strong support for continuing Single-Family Housing Zoning in the range of zoning options available to the city and residents. Other options should also be included and new ones added without eliminating one that has served the city well over the years and is needed for the future.

Single-family homes are a defining characteristic of some of our neighborhoods. Eliminating that zoning option could lead to overcrowded lots, schools, streets and parking spaces, not to mention additional demands on police, fire and other first responder services. We have already seen these overcrowding impacts on nearby cities.

I strongly urge you to keep South Pasadena's best long-ranges interests in mind as you contemplate possible changes.

Sincerely,

Félix Gutiérrez

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals. The Housing Element includes policies that commit the City to allow for missing middle housing types along high-quality transit corridors, if property owners so choose.

Laurie Chatham (March 8, 2023)
Dear All Concerned,

The DRAFT Housing Element has come to my attention via my concerned neighbors. I wanted to give my input as a concerned community member, having lived in South Pasadena for 26 years, and having visited my Great Aunt in this city since 1958.

Is it true that the DRAFT includes elimination of zoning for single family homes throughout the entire city? Is it true that there is a proposed height limit for buildings being increased to seven story structures? These proposals will have a negative impact on South Pasadena and are extreme. We have seen how other neighboring communities have allowed higher density development on lots that previously contained a single family home. There is significantly more traffic and the community atmosphere is negatively impacted. Please consider limiting the change in zoning to the high transit corridors (not city-wide) and elimination of references to seven or more story buildings in South Pasadena.

Thank you for your consideration,

Laurie Chatham
1915 La France Ave.
South Pasadena, Ca. 91030

How addressed: No, it is not true that zoning for single-family homes throughout the City is being proposed. The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023. It is also not true that the height limit is being increased. The action taken through the Housing Element adoption does not eliminate the existing height limit or create a new height limit. The Housing Element establishes a program for the voters to decide whether to establish a new height limit to achieve the densities required to meeting the RHNA housing goals. If the voters do not increase the height limit in certain areas, other zoning-based measures (such as conversion of current low density areas into higher density areas) will need to be analyzed and submitted to HCD for review.

Deni Sinnott (March 8, 2023)
I am writing to comment before today's deadline on South Pasadena's plan to build affordable housing.

I am confused by the fact that the city wants to march forward on the plan to supply affordable housing but has decided the Golf Course is off limits.

From Appendix B:

Has the City looked at the Arroyo Seco Golf Course as a suitable housing site for affordable housing? - City staff responded that converting the golf course into homes is an option, but one that is not politically popular and therefore not proposed as part of the Housing Element at this time.

Who is the council affiliated with that they need to back off from using this piece of land for the plan?

It would seem to be ideal and could be used to create housing in the Arroyo which is idyllic compared to some of the sites proposed, in particular, JAMMING housing on smaller parcels or even in between current houses that exist on residential streets.

I am in favor of lifting height restrictions on buildings but those newer, taller buildings would need to be built on major thoroughfares.

We do need to build more housing and there are some buildings/parcels that I just know could be purchased to accomplish this tasks are:

- Crash Champions Body Shop on 300 Fair Oaks- two large lots could accommodate 1 building each.
- 1499 Huntington Drive office building at Fair Oaks (old and needing rehab) Occupancy is not 100%. I believe this is taller than 4 stories already!
- Bargain Market and adjacent retail could also be used for new homes/apartments/condos.

I am sure there are many more places in the city that could be repurposed without disturbing the streets where we have mostly single family homes. If ADU is a desired route, the city should subsidize the building of those to homeowners who would like to participate and STREAMLINE the permitting process to be less onerous.

- **How addressed:** The golf course was considered as a housing site during the February 1st City Council meeting. The City Council directed staff to find alternative to accommodate the city's housing needs that did not remove recreational open space from the City. The Housing Element does consider these other parcels as potential candidates for redevelopment, but the City does not have substantial evidence that they will be redeveloped during the planning period. As the Housing Element is part of the General Plan, it must be consistent with other General Plan elements, including the Open Space Element which requires sufficient recreational space for the residents of the City. However, the City is committed to continue to analyze additional sites, including potential sites in the Arroyo in the future.

Mary Urquhart (March 8, 2023)

The recommendation to repeal the current 45-foot height limit on any residential or mixed-use project is in opposition to the vast majority of residents. The minimum requirements of 84 feet and 7 stories or 110 feet and ten stories, depending on whether the project is in an area with a density of 50 or 100 units per acre, respectively, is unacceptable.

However, the approach of layered zoning in major corridors has the potential to be a bonus to our City. Mixing affordable housing with middle and higher-income housing options along with retail in major corridors that have a much higher traffic flow, such as Huntington Drive, should be listed as an option. Once the HE is approved, we can explore ways to work with our community to do this where this may be a bonus to our community. Areas that may apply to this concept are located on Huntington Drive and Arroyo, which are currently not offered in the current HE.

The second area that is of deep concern in the 5th draft is the implementation of SB9 and SB10, the Missing Middle Housing (MMH). SB10 is NOT a mandate and our City and our City were not considering this. Why was this included? Can you imagine this being allowed in our historic Bungalow Heaven? This language should not appear in our HE.

I do applaud the hard work that our City Planning Department has done in the past few months to pass an acceptable HE.

- **How addressed:** The action taken through the Housing Element adoption does not eliminate the existing height limit or create a new height limit. The Housing Element establishes a program for the voters to decide whether to establish a new height limit to achieve the densities required to meeting the RHNA housing goals. If the voters do not increase the height limit in certain areas, other zoning-based measures (such as conversion of current low density areas into higher density areas) will need to be analyzed and submitted to HCD for review. The City has a requirement to address issues related to Affirmatively Furthering Fair Housing (AFFH) and to accommodate the number of homes allocated to it through the Regional Housing Needs Allocation process. Removing or increasing the current height limit is the only way to accommodate the RHNA requirements without upzoning the existing low-density residential zones. The City is not opting into SB 10 but instead is using the framework of the law to create the Missing Middle Housing program. The program will have specific objective design standards to allow certain housing types that are consistent with existing residential character. The policies in the Housing Element fulfill the requirements of AFFH.

Mary Farley (March 8, 2023)

There was given no time for working people in South Pasadena to respond to this proposal. We are being railroaded and this needs to be litigated. The impact on our tiny town is wildly disproportionate compared to contingent communities.

When my family moved to South Pasadena from Boston forty three years ago, we asked my husband's employer, USC, what would be a good place for a mixed race family to relocate near the medical school, and the suggestion was South Pasadena.

The introduction of racial elements into this battle over development is bogus and there should have been adequate time in which to challenge it.

- **How addressed:** Since May 2020, the City has held several community input sessions and recently held three: City Council meetings, on February 1st, February 9th, and February 15th (Joint Meeting with the Planning Commission) to discuss the Housing Element revisions. State law requires that all housing elements address racial wealth and homeownership gaps as part of the Affirmatively Furthering Fair Housing (AFFH) analysis.

Eric Hausner (March 8, 2023)

Dear City of South Pasadena,

As a home owner and resident of South Pasadena, I wanted to provide feedback on the proposed General Plan Housing Element. In particular, I am concerned with allowing duplexes, triplexes or fourplexes throughout the city.

This change will fundamentally harm the fabric of South Pasadena that makes it so unique and special. Instead, I would suggest limiting these changes to major traffic corridors only, such as Huntington, Fremont, Fair Oaks, Mission (near downtown) or near the Metro station.

I also think it's a good idea to wait on revising the height limit until voters have had a chance to cast their votes on the matter.

I understand the enormous pressure the city is under to make these changes. However, hopefully we can find a way to be compliant while also preserving the character and history of this amazing city.

Respectfully,

Eric and Emily Hausner
1722 Milan

- **How addressed:** The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023. The Housing Element does not change the height limit, it commits the City Council to bring forth a voter initiative to consider repealing or replacing the height limit and provides a new height limit if it is replaced.

Helen Mendoza / Pamela Privett (March 8, 2023)
To the City Council:

While we are in favor of increasing and diversifying housing within the city of South Pasadena, we believe the new draft of the Housing Element is at best, extreme and out-of-line, and at worst, thoughtless and irresponsible. As we understand it, the new draft 1) eliminates zoning for Single Family Homes 2) allows for development of up to 4 units on any property city-wide and 3) raises building height limits to 7-10 stories.

These are outrageous rules and will 1) negatively impact the property values for all residents in the city 2) severely encumber a school district already stretched to the limits on space and resources and 3) destroy the very character and quality of life that has made South Pasadena the kind of community people want to live and raise their families. In addition, we feel you have failed to consider that the city's infrastructure is neither designed nor capable of dealing with the increased need for resources should these new rules go into effect.

Yes, we need to find a solution for affordable housing for the city's residents and those who want to move here. However, doing so by creating rules that will make it possible to fundamentally change the fabric of our town and destroy the value of historic neighborhoods like Buena Vista in the northside or Edgewood/Milan/Stratford to the south side or those in Monterey Hills would be irresponsible and negligent.

South Pasadena's "calm" within the "chaos" of Los Angeles is what brought us here. We wanted to raise our children in good schools and live in a diverse and welcoming community. It was the history of the old house we got to restore, and the small town neighborliness we love that have kept us here.

There is a saying about buying real estate — don't purchase a single family home that has a multiple family unit on the block. The city's new plans will make it possible to put multi-unit apartments on ANY property… and that would devalue all the property for all residents.

These new Housing Elements would fundamentally destroy the face and skyline of the city, and it would in turn dismantle South Pasadena's character and heart.

Every city is having difficult conversations about how to deal with their fluctuating population densities. The draft presented, however, is short-sighted and misguided. Surely the city can find more creative solutions to these issues than what has been put forward.

Helen Mendoza / Pamela Privett

The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023.

Jenny Bright (March 8, 2023)
South Pasadena is a wonderfully unique City with a balanced housing stock of owners and renters and also a balanced and diverse population of residents. Eliminating single family zoning would erode the entire character of the City that attracted its diverse population in the first place. It would make the City indistinguishable from every other community just outside of LA. Raising the height limit of buildings would be an irreversible step and make this City that has been so thoughtfully preserved for the last 135 years unrecognizable. We can and should add affordable housing units but we can do this without destroying the City.

-Jenny Bright

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals. The policies in the Housing Element fulfill those requirements. The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023. As to the actions regarding the height limit, the action taken through the Housing Element adoption does not eliminate the existing height limit or create a new height limit. The Housing Element establishes a program for the voters to decide whether to establish a new height limit to achieve the densities required to meeting the RHNA housing goals. If the voters do not increase the height limit in certain areas, other zoning-based measures (such as conversion of current low density areas into higher density areas) will need to be analyzed and submitted to HCD for review.

Jim Tavares (March 8, 2023)
I believe there is general consensus that it is the right thing to create more housing within South Pasadena; the concerns are how that housing is created, what it looks like, and ensuring it does not

create unintended consequences of congestion and loss of South Pasadena's community feel. If South Pasadena simply becomes a place, and no longer a community, the process will have failed.

I don't think that has to happen.

I think roundly rejecting SB 10 is a must, as is rejecting the idea of a ballot measure for unlimited building heights at 50 du/acre. It will create endless disharmony between opportunistic developers and residents and break the character of our community. An 8,000 sf lot with ten units on it will accomplish the density needed to exceed 85 feet in height and shadow a residence next door.

Market rate sale of Caltrans properties can go a long way for Los Angeles as well as South Pasadena to fund more affordable housing projects vs. repurposing of these homes and the costs to do so--private owners can purchase and rehabilitate the homes with the sale profits going to other projects throughout the city, retaining the character of existing neighborhoods.

I think it is folly to have any properties that do not supply parking at a rate below one per unit, and higher form 2+ bedroom units, despite proximity to public transportation. While I hope public transportation will be used and ease congestion, ridership has trended down over the past 5 years, and while it has recently been on the upswing among certain demographics, safety concerns and reliability/destination proximity will likely force many into their cars, no matter where they live, straining surface streets for parking access.

Lastly, massing at the street and a provision for length of unbroken wall in a given plane and raking of massing from the street, with some green space around structures can go a long way to preserving the community feel so many have come to South Pas to experience. these details need to be ironed out in the Housing Element to ensure development that people want to stay within and around.

Very truly yours,

Jim Tavares

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals.The policies in the Housing Element fulfill those requirements. The City is not opting into SB 10 but instead is using the framework of the law to create the Missing Middle Housing program. The program will have specific objective design standards to allow certain housing types that are consistent with existing residential character. Per a Court Judgement, the City must place a measure on the ballot to repeal or amend the current height limit.

How addressed: SB381 has state-mandated requirements on how to acquire, utilize, and transfer homes currently owned by Caltrans. The City Council has made no determination regarding the purchase of any of the surplus Caltrans properties or the specific use of any of the properties. The City is still analyzing the financial feasibility of purchasing the properties and the various options for converting them to affordable housing. The City cannot commit to a specific course of action for the surplus Caltrans properties until that analysis is complete. Furthermore, selling all of the surplus Caltrans homes at market rates to generate capital for the creation of deed-restricted affordable housing elsewhere in the city is not an allowable action under SB 381. Staff will explore possible solutions.

Mark Gallatin (March 8, 2023)

The City of South Pasadena has made tremendous progress under unprecedented circumstances toward the development of a housing element that can satisfy the rigorous requirements of state law. Now however, with a court-appointed deadline for completion looming, this progress could be endangered by two proposed programs in the 5th draft of the element that, as presently constituted, do not yet reflect the most creative approaches to the issues they seek to address and will quite likely provoke opposition from many residents.

The first of these is Program 2.n, the Citywide Height Limit Ballot Initiative. This program calls for a referendum on repeal of the current 45-foot height limit on any residential or mixed-use project on which the housing element anticipates a base density in excess of 50 units/acre. It proposes to replace the current height limit with either no height limit or a minimum requirement of 84 feet.

The reason for essentially doubling the current maximum height to a new minimum height is ostensibly to accommodate the greater densities planned in localized areas to stated density goals in order to help the City meet its RHNA target and to achieve the densities identified in the Downtown Specific Plan (DTSP). Despite being revised to reflect a lower minimum height limit, the current language of Program 2.n still tracks with that from the State of California's Department of Housing and Community Development. As such, it does not yet reflect a locally developed solution created with input from community members, appointed and elected officials seeking to maximize compliance and minimize harm, a thoughtful, more nuanced approach that better aligns with the tradition and character of the city's built environment.

What might such an approach look like? For starters, it would restate the modest proposal made by the City's original general/specific plan consultant to consider raising the height limit along Fair Oaks Avenue frontage properties within the DTSP from 45 feet to 50 feet to facilitate well designed and proportioned four-story buildings on Fair Oaks Avenue.

Second, it would draw on the incredible depth of talent, expertise and experience of design and architectural professionals that call South Pasadena home, as well as interested laypeople, to fashion a strategy that de-emphasizes governing metrics such as minimum height in feet or number of stories and instead focuses on standards such as floor area ratio (FAR) and unit size to create a "building envelope" capable of accommodating the desired densities within the confines of the existing height limit or a modesty increased one. That such an approach can yield the densities contemplated in the DTSP or in overlay zones on arterial corridors has already been demonstrated by projects completed in cities across the region, in locations as diverse and different as Santa Monica and San Gabriel. The inclusion of some of these standards in the latest draft of Program 3.b is a good beginning but it is hoped they are just the starting points for further discussions rather than faits accomplis, as the real work will begin when drafting new zoning provisions to implement the adopted element. Creative approaches to density, such as the "layered zoning" approach on major corridors, as recently presented at a WISPPA forum on the housing element, should be given serious consideration and embraced, lest we become consigned to monolithic housing blocks with minimal setbacks and amenities. Density simply doesn't have to be done that way, as history both here and abroad should have taught us.

The second program of concern in the 5th draft is Program 3.m, Implement SB 9 and SB 10. Missing Middle Housing (MMH) is a key strategy in helping the City meet its housing goals but it should in no way be conflated with SB 10. MMH was being successfully implemented in California and other states long before SB 10 was even dreamed of. SB 10 is not a mandate to be blindly followed by cities under threat of penalty but is in fact legislation that requires that cities opt into it voluntarily. Our City Council wisely voted not to opt into SB 10 when presented with the opportunity to do so. MMH can

be implemented with greater flexibility without choosing to opt into SB 10. By placing the very valuable strategy of MMH under the aegis of SB 10, Program 3.m unnecessarily stokes fear in residents to the detriment of acceptance of the housing element as a whole.

The key policy question for the city as regards the implementation of MMH is whether to apply it only in selected areas of the city or allow it citywide as what planners refer to as a "floating" zone. Such a zone is not tied to a specific area, but rather would make MMH a possibility on any residential property that meets certain objective design and development standards. The latest draft of Program 3.m favors the former approach by establishing a nexus between the location of MMH housing types and proximity to high-quality transit corridors and/or transit stops. Such a nexus is logical, given the importance high-quality transit corridors and/or transit stops played in determining the City's RHNA allocation. Suffice it to say that perhaps preliminary criteria, such as minimum lot size, can be established to screen out areas where MMH might be infeasible, being mindful of the fact that some neighborhoods have a preponderance of lots less than 5,000 square feet in size.

In conclusion, the shortcomings of Programs 2.n and 3.m not withstanding, the latest update of the 5th draft of the Housing Element is appreciated and raises hopes that the conversation around implementation changes from one about terms like density, multi family and upzoning and instead begins to focus on form, scale and housing types. The first version of the 5th draft was representative of a philosophical approach which has dogged the preparation of the housing element from the beginning. That is, whether to craft a creative comprehensive and inclusive grassroots approach to housing policy that reflects and respects the will of the people or to place trust in the community's future with an all-knowing, all-powerful state government dictating and mandating from on high. With the element so close to completion now, it is sincerely hoped that the choice will be the former, rather than a community vision of the state, by the state and for the state.

- **How addressed:** The new height limit in Program 2.n is not a minimum height, it a revised maximum height limit to allow for the densities identified in the Housing Element. If the height limit is replaced, the new height limit shall be no less than 84 feet. Nothing in this would prevent a land owner or developer from proposing and constructing a building that is less than 84 feet. The Housing Element establishes a program for the voters to decide whether to establish a new height limit to achieve the densities required to meeting the RHNA housing goals. If the voters do not increase the height limit in certain areas, other zoning-based measures (such as conversion of current low density areas into higher density areas) will need to be analyzed and submitted to HCD for review.
- **How addressed:** The City is not opting into SB 10 but instead is using the framework of the law to create the Missing Middle Housing program. The program will have specific objective design standards to allow certain housing types that are consistent with existing residential character. The Housing Element is specific about which housing types the city is going to consider as part of its missing middle housing implementation, as well as the areas of the city where missing middle housing will be allowed.

Delaine W. Shane (March 8, 2023)

Dear Community Development Department Staff and Management:

Thank you so much to be willing to making last minute text edits on the proposed housing element. I will limit my response in this email to Program 1.b concerning the fate of the Caltrans housing. Some of your yellow highlighted text I get are meant to be a compromise, but they are so wishy washy that

"explore" means nothing. There is no real commitment. Here are my suggested revisions, based on the latest version online

Program 1.5 - Convert Caltrans Homes to Affordable Housing The City will leverage the Caltrans surplus properties that have resulted from the State's cancellation of a proposed route to extend the 710 freeway through South Pasadena to generate capital for the rehabilitation and creation of deed restricted, affordable housing units throughout the city by a development partner. The Caltrans and the City have initiated a property sales program for the 710 freeway surplus properties. The City worked with Senator Portantino to pass SB 381 and the emergency rulemaking regulations were released on March 28, 2022. The City will have priority to purchase unoccupied Caltrans surplus properties, as well as occupied Caltrans surplus properties if the existing tenants do not purchase the properties. The City has been working with Caltrans to obtain property files and to inspect the properties in order to evaluate the surplus properties. It is anticipated that the City will purchase all or some of the Caltrans surplus properties once Caltrans provides purchase and sale agreements to the City. To ensure the financial feasibility of acquiring the unoccupied properties and in turn leveraging them to expand housing opportunities in South Pasadena, staff will explore whether there might be any alternative solutions to those provided by SB381 that respond to the cost constraints of particular properties.	Acquire and convert unoccupied, Caltrans-owned properties, that are not sold at fair market value to deed-restricted affordable housing units to expand housing mobility opportunities for lower-income households and revitalize underused areas. Maximixe the surplus Caltrans property portfolio in service of the City's commitment to develop and expand housing mobility.	General Fund; HRE; public (federal, state, regional) grants, loans and equity sources (i.e. CalHome, LIHTC, SGVRHT, etc.)	Caltrans; Community Development Department/City Manager's Office	Conduct feasibility study in 2022 and early 2023; technical assistance and work with nonprofits at least annually throughout planning period. Initiate a six-month tenant land sales information dissemination and purchase option process within 90 days following completion of implementation of necessary components of land transfer by State; target determination for City purchase of remaining surplus properties within 6 months of completion of tenant priority purchase period. Units will be available to occupants by October 2024.

CITY OF SOUTH PASADENA MARCH 2023
2021-2029 PUBLIC REVIEW DRAFT GENERAL PLAN HOUSING ELEMENT UPDATE Page 5

If financially feasible and demonstrated as such in writing by a qualified financial expert, the City will leverage the Caltrans surplus properties that have resulted from the State's cancellation of a proposed route to extend the 710 freeway through South Pasadena to generate capital for the rehabilitation and creation of deed restricted, affordable housing units throughout the city by an experienced, qualified development partner in the affordable housing construction industry. The Caltrans and the City have initiated a property sales program for the 710 freeway surplus properties. The City worked with Senator Portantino to pass SB 381 and the emergency rulemaking regulations were released on March 28, 2022. The City will have priority to purchase unoccupied Caltrans surplus properties, as well as occupied Caltrans surplus properties if the existing tenants do not purchase the properties. The City has been working with Caltrans to obtain property files and to inspect the properties in order to evaluate the surplus properties. It is anticipated that the City may purchase some of the Caltrans surplus properties once Caltrans provides purchase and sale agreements to the City. To ensure the financial feasibility of acquiring the unoccupied properties and in turn leveraging them to expand housing opportunities in South Pasadena, staff will prioritize and pursue alternative solutions, including the side-by-side escrows or double escrows, outside of SB381 that respond to the cost constraints of particular properties.

Acquire, if financially feasible, and as a last measure, convert unoccupied, Caltrans-owned properties, that are not sold at fair market value to deed-restricted affordable housing units to expand housing mobility opportunities for lower-income households and revitalize underused areas, so long as the neighborhoods of the remaining Caltrans properties are not overly represented. Expanding housing mobility opportunities shall be shared equally and distributed throughout the City.

The statement in the right column at the bottom states: "Units will be available to occupants by October 2024." Seems to be overly optimistic. Recommend deleting it or saying X months after work has been completed that the units will be fit for occupation. You have no control over construction/rehab contractors, supply distribution systems, and actual materials. Delays are unfortunately part of our new normal post pandemic. Why box yourself in a corner with HCD by setting an unrealistic and really naïve date?

Thanks again for allowing input by the public in this manner.

Sincerely,

Delaine W. Shane
2003 Meridian Avenue

- **How addressed:** The City Council has made no determination regarding the purchase of the surplus Caltrans property or the specific use of the properties. The City is still analyzing the financial feasibility of purchasing the properties and the various options for converting them to affordable housing. The City cannot commit to a specific course of action for the surplus Caltrans properties until that analysis is complete. Furthermore, selling all of the surplus Caltrans homes at market rates to generate capital for the creation of deed-restricted affordable housing elsewhere in the city is not an allowable action under SB 381. Staff will explore possible solutions.

Ed Elsner (March 9, 2023)
Dear Director Frausto-Lupo,

Avoiding displacement of existing residential tenants should be a higher priority in the City's housing element.

The 5th draft housing element proposes to include Huntington Drive as part of the Downtown Specific Plan, change the zoning of medium and high density residential parcels to mixed-use, and increase density to 70 du/ac -- a higher increase than the 30 du/ac and 45 du/ac proposed for medium and high density residential zones elsewhere in the City.

This proposed rezoning of Huntington Drive would promote displacement of existing tenants residing in multi-unit apartment buildings along Huntington Drive, and while the housing element's proposed tenant protections may help mitigate the displacement, as a practical matter the displacement will be permanent.

Displacement most acutely affects families with children (who may have to be pulled out of school mid-year), the elderly, and the disabled, and the impacts can be devastating.

In my experience representing residential tenants in eviction cases off and on for 30 years, the "right of return" is illusory in most cases.

This is primarily because two moves are required. While the landlord would be required to pay relocation assistance to the tenant on the way out, the right of return typically does not include a requirement for the owner to pay moving expenses for the return move. The right of return depends on the landlord giving the displaced tenant a written offer, and the tenant typically has a limited period of time (typically, 30 days) to accept the offer. The mailed notice may or may not be received, whether because of problems with mail delivery, a property owner who is a bad actor who does not follow the notification rules, a tenant who has moved and neglected to provide a forwarding address, etc.

If the notice is received, it may come years after the tenant was evicted. The tenant may have moved out of the area and established roots in another community, the tenant may not be able to afford the return move, the tenant may be in the middle of a fixed term lease that the tenant cannot break, etc. A successful tenant must be vigilant in monitoring the construction process and may have to hire an attorney to enforce their rights. But most importantly, the tenant's personal situation must be flexible enough that the tenant can make a quick decision at some uncertain time in the future to make the return move, and the tenant must have the financial resources to do so.

A 2018 Los Angeles Times article illustrates the practical reality of the right of return in a City with a well-funded, fully staffed housing department.

The 5th draft housing element also appears to understate the number of existing units on Huntington Drive that would be affected by redevelopment.

To take a random example, parcel 5319037001 (1170 Huntington Drive) is identified in the draft housing element as high density residential parcel with 0 existing units. However, this is actually a 20-unit apartment building. There are many other examples of parcels identified in the draft as medium or high density residential parcels having 0 or 1 existing units when the parcels actually have multi-unit apartment buildings.

Rezoning of medium and high density residential parcels on Huntington Drive should be the same as for medium and high density residential parcels elsewhere in the City.

The "missing middle housing" program in the pre-March 7th draft had good potential to increase housing production while minimizing displacement of existing residential tenants. This is because eligible properties would be single-family parcels occupied in most cases by the property owner, who would be making a voluntary decision to participate or to sell the property to a developer and relocate.

However, the March 7th update may have effectively gutted the program. Before the March 7th update, the missing middle housing program would have applied citywide in all residential zones except high fire hazard areas, and there was a commitment to implement the provisions of SB 10. In the latest update, only parcels in "low-density residential zones along high quality transit corridors and/or transit stops" (and not in a high fire hazard area) would be eligible, and the scope of the program is yet to be determined "by the community, Planning Commission, and City Council."

It is unclear which low-density residential zones would be considered to be "along" the City's high quality transit corridors, identified in SCAG's Data/Map Book as Fair Oaks Avenue and Huntington Drive east of Fair Oaks, as there is no low-density residential zoning actually on either street, and the March 7th update does not identify parcels or zones that would potentially be eligible (subject to a future scope determination).

The housing element should include a more robust missing middle housing program.

Thank you for your consideration,

Ed Elsner
edelsner44@gmail.com

- **How addressed:** Goal 6 and the policies within that goal will be developed after further research to mitigate the potential for and impacts of displacement. The number of existing units was pulled from building permit data. The data was spot checked, but may be incomplete for some parcels.

Ed Elsner (March 9, 2023)

Dear Director Frausto-Lupo,

I'm writing to describe a possible alternative to program 2.n. in the 5th draft housing element (as updated on March 7, 2023), the Citywide Height Limit Ballot Initiative. The alternative would be a general plan amendment modifying the forty-five foot height limit established by local initiative in 1983.

This general plan amendment could be implemented on the same 120-day timeline as the housing element's other rezoning programs (which include other amendments to the land use element of the general plan), and with more certainty than the proposed 2024 ballot measure.

Recognizing that this alternative program may not be viable politically, I'm hoping this comment at least provides additional perspective that may be useful as the City works towards achieving its housing element goals.

The General Plan and the Land Use Hierarchy

The state Planning and Zoning Law establishes the authority of local governments to regulate the use of land. Gov't Code § 65000 et seq.; Neighborhood Action Group v. County of Calaveras (1984) 156 Cal.App.3d 1176, 1182. Each city must adopt a general plan for the physical development of the city. Gov't Code § 65300. The general plan takes precedence over other local zoning laws:

> The general plan is atop the hierarchy of local government law regulating land use. It has been aptly analogized to "a constitution for all future developments." [Citation omitted.]...Subordinate to the general plan are zoning laws, which regulate the geographic allocation and allowed uses of land. Zoning laws must conform to the adopted general plan. [Citations omitted.] These enactments provide the authority and the criteria for the regulation of land uses.

Neighborhood Action Group, 156 Cal.App.3d at 1183; Gov't Code § 65850 (authorizing cities to adopt zoning ordinances).

Local Initiatives and General Plans

Although a city's general plan may be amended by local initiative (DeVita v. County of Napa (1995) 9 Cal.4th 763), the electorate must have adequate notice of the purpose of the initiative:

> We cannot at once accept the function of a general plan as a "constitution," or perhaps more accurately a charter for future development, and the proposition that it can be amended without notice to the electorate that such amendment is the purpose of an initiative. Implied amendments or repeals are disfavored in any case [citation omitted], and the doctrine may not be applied here.

Lesher Communications, Inc. v. City of Walnut Creek (1990) 52 Cal.3d 531, 540-541. "Since we cannot presume the existence of such intent [to amend the general plan], it must be found, if it exists, in the ballot measure itself or the explanatory material in the ballot pamphlet." Id. at 542. Stated another way, in order to amend the general plan, the text of the local initiative or the explanatory ballot materials must provide notice that the measure is something "other than an ordinance in the nature of a zoning ordinance." Id. at 544.

The 1983 Height Limit Initiative

In a 1983 special election, South Pasadena residents voted to approve a local initiative establishing a citywide height limit of forty-five feet (Reso. 5642):

The initiative did not identify a provision of the general plan that it would amend, nor did it state that it was adding to the general plan; therefore, absent some other basis in the ballot materials to conclude that its purpose was to amend the general plan, the 1983 initiative has the status of a zoning law subordinate to the general plan in the land use hierarchy. Lesher Communications, 52 Cal.3d at 541.

Amending the General Plan to Modify the Height Limit

Section 9217 of the Election Code generally provides that local initiatives may not be amended or repealed except by a vote of the people, and program 2.n. assumes that the City's forty-five foot height limit cannot be modified without voter approval.

However, if the 1983 initiative is subordinate to the general plan, section 9217 would not restrict the City Council's authority to amend the general plan to modify the height limit, and once amended, the general plan would prevail over the inconsistent subordinate law:

> The Planning and Zoning Law itself precludes consideration of a zoning ordinance which conflicts with a general plan as a pro tanto repeal or implied amendment of the general plan. The general plan stands....The Planning and Zoning Law does not contemplate that general plans will be amended to conform to zoning ordinances. The tail does not wag the dog. The general plan is the charter to which the ordinance must conform.

Lesher Communications, 52 Cal.3d at 541.

For similar reasons, the 1983 initiative cannot be interpreted as superordinate to the general plan. The local electorate's right to initiative is co-extensive with the legislative power of the local governing body (DeVita, 9 Cal.4th at 775), so if the City Council cannot enact a land use law above the general plan in the land use hierarchy -- which it has no authority to do under the Planning and Zoning Law -- neither can the electorate via local initiative. Legislature v. Deukmejian (1983) 34 Cal.3d 658, 674-675 (initiative power is subject to the same limitations as legislative action).

The Housing Accountability Act provides additional support for the suggested general plan amendment. If a proposed housing development project is consistent with objective general plan standards and criteria, but the zoning for the project site is inconsistent with the general plan (for example, because a zoning ordinance includes a lower height limit), the project will be deemed "not inconsistent" with applicable zoning standards and criteria for purposes of approval of the project's land use application. Gov't Code § 65589.5(j)(4).

The 1983 initiative could have included clear language that it was amending the general plan, but as written, it left the door open for the City Council to modify the height limit through a superseding general plan amendment.

Noncompliance with the Housing Element Law

The City has been out of compliance with the housing element law since October 2021, and because it missed the October 2022 deadline to adopt a housing element and to obtain certification from HCD, the City will remain out of compliance until the City adopts a compliant housing element and completes the related rezoning programs.

Given recent media attention, there is more widespread awareness of the consequences of noncompliance with the housing element law, including the loss of authority to disapprove land use applications for housing projects that are inconsistent with the City's zoning laws, also known as the "builder's remedy." Gov't Code § 65589.5(d)(5). As a result, the electorate has a better understanding why South Pasadena needs to obtain housing element compliance sooner than later, and anyone following the progress of the City's housing element should understand how a modified height limit in designated higher-density zones is critical to achieving that goal while avoiding a radical upzoning of the the entire city.

Thank you for your consideration,

Ed Elsner

edelsner44@gmail.com

- **How addressed:** The Housing Element proposes a program to amend the zoning code height limit which was adopted by the voters. Any ordinance enacted by the voters may only be amended by the voters. The Housing Element establishes a program to put this question to the voters to decide whether to establish a new height limit to achieve the densities required to meeting the RHNA housing goals. If the voters do not increase the height limit in certain areas, other zoning-based measures (such as conversion of current low density areas into higher density areas) will need to be analyzed and submitted to HCD for review. Per a Court Judgement, the City must place a measure on the ballot to repeal or amend the current height limit.

Julie Pearson (March 9, 2023)
To our city staff,

As a resident of the city for 25 years, married to a resident of over 50 years, who is the child of a resident of nearly 60 years, we oppose the city's intention to remove all single-family zoning requirements, city wide. We also oppose the city's intention to allow structures in the city to rise more than 6 stories.
These proposed changes in our opinion would change the feel of our town as well as the neighborhoods, and be detrimental to the family friendly environment that is central to our city.

Thank you for considering my comments.

Sincerely,
Julie Pearson, Keith Pearson and Margie Pearson
1749 Via del Rey

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals.The policies in the Housing Element fulfill those requirements. The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023.

Bill Kelly (March 9, 2023)
Public Comment on Second Draft of Draft 5 (March 7, 2023) of South Pasadena's Housing Element
(Submitted March 9, 2023)

Greetings:

Thank you for the opportunity to comment on the second draft (March 7, 2023) of the fifth draft (March 2, 2023) of South Pasadena's proposed Housing Element 🤓 in my hopes that it will result in a third draft of the fifth draft.

The comments below first cover general concerns with the latest draft. The second part covers various concerns reflected in previously published and verbalized community comments regarding state housing requirements, as well as an email sent by a resident to unspecified individuals aimed at

prompting comments and complaints to City management and Councilmembers, which you have no doubt received.

Specifically, I urge you to:

- End R-1 zoning throughout the city (except in areas with wildfire and geologic hazards); and

- Get started with affordable housing by committing in the City's housing element to seeing that denser affordable housing is built on as many of the unoccupied Caltrans properties as possible. (The well documented need for affordable housing amid the widely discussed housing crisis need not be amplified here. It is a well-established feature of the landscape.)

In submitting the next draft of the Housing Element to the state, foremost please remember that zoning does not build housing, only investment does, and the vacant Caltrans properties at this point represent the only palpable prospect the City can increase its stock of desperately needed affordable housing in the next few years. Moreover, change will not come overnight with rezoning. Change will come only over a decade or more. Indeed, many of us who are debating housing will be dead and gone before any appreciable change.

General Concerns

First of all, South Pasadena is not alone among cities that to date have failed to see their housing elements approved. It is clear that cities are dealing with relatively recently passed laws and emotional divisiveness among their residents as change rarely is easily accepted. Nowhere, perhaps, is that more true than in South Pasadena, one of the few communities across the nation that stopped the extension of a freeway. That said, much of the traffic the freeway would have conveyed now travels on city streets, including Fair Oaks and Fremont that are regularly gridlocked. Meanwhile, polluting diesel trucks hauling containers from the region's ports don't pass through South Pasadena to reach logistical centers on the periphery of the region, but instead travel along the 60 and I-10 freeways through less affluent communities, many of which are predominantly of color. At the same time, the City has been essentially unable to agree and carry out any significant effort to use available funds for traffic calming, active transportation facilities, and surface street projects, as other cities move forward.

When it comes to housing, some City residents have fought any efforts or plans to allow for increased density, instead seeking to shoehorn density into narrowly prescribed strips along commercial streets and major arterials. In addition, the city's planning and permitting process is lengthy and tedious. As a result, there has been relatively little change in the landscape in the more than thirty years I've lived here. Indeed, residents—including freeway fighters, historical preservationists, and many prosperous owners of large single family homes on large parcels, aided by others prone to fear of change—have managed to keep South Pasadena more or less the way it has been since the post-World War II era, a quaint bedroom community that celebrates the days of Route 66, classic cars, good schools, and beautiful gardens, a community that many residents view as charitable and charming. And no doubt all these things contribute to South Pasadena's much locally celebrated and revered "neighborhood character."

Personally, I must admit that I was drawn to the community upon returning to Southern California in 1988 due to its neighborhood character. However, a lot has happened since then and as I've witnessed the changes—hollowing out of the middle class, offshoring of manufacturing, stagnation of wages, growing inequity, increasing social and racial tension, rampant drug addiction and social

dysfunction, growing homelessness, overcrowding, housing insecurity, a wave of mental illness, and the astronomical cost of housing, and rapidly accelerating climate instability—my view of what it means to live here in South Pasadena, in the region, and in the world has changed dramatically. Today, it's become increasingly apparent that the magnitude of change needed to address this complex of interrelated problems has become so great that over the next ten to 20 years just about everything around us must change, including here in South Pasadena. However, this view is assuredly not shared by apparently influential residents who say they support "thoughtful and conscious growth and expanded thinking" as long as it's not next door. They complain about any proposal to add much needed housing, grasping at any potential plausible objection, such as lack of water, lack of power, traffic, burdens on schools and services, lack of open space, ***and mostly the perception that growth will diminish their property values***. They dispose of anything that's seemingly proposed, yet never articulate on their own what a housing element, or general plan should include. And history has shown their tendency is to get the city to legally contest many state requirements aimed at solving these problems, and then slow roll any local actions developed to meet the requirements once legal actions play out. This pattern clearly is based on the view that South Pasadena is exceptional and should be left to manage its own affairs without regional and state oversight. Yet, this is despite that the source of the wealth here stems from proximity to the second largest metro area in the nation situated on the rim of trans-Pacific trade and in the heart of a state with one of the world's biggest economies. ***Indeed, the message seems to be: I'll enjoy the personal wealth the region offers, but don't ask me to contribute much toward solving the region's problems. Moreover, don't call us irresponsible, because we supported local tax measures and contribute to local charities that are "truly . . . sustaining our way of life here in SoPas." In this case sustaining is a substitute for "not changing."***

However, as city officials and Councilmembers it is incumbent on you to lead, rather than to cater to such provincialism. Just imagine that the story is much the same in small cities across the region and the state when it comes to the state's housing requirements. Note too that such attitudes have prevailed for decades, while problems have mounted and festered. Indeed, it's the lack of any local effort to address the housing crisis that led lawmakers in Sacramento to enact new state requirements. So now, it's reckoning time. Unless we look in the mirror as a community and make the change, the problems that everyone seems to acknowledge and agree must be solved, won't be solved by doing the same as we have done in the past.

Addressing Specific Contentions Voiced in the Community

City-wide R-4 zoning will diminish property values

Don't tread on me and my property value by continuing to maintain R-1 zoning. Numerous studies cited below show that increasing density, particularly everywhere, will result in rising property values and likely check rising rents and housing costs. In addition, the city's inclusionary housing ordinance will require more affordable units.

https://masslandlords.net/gentle-density-increases-nearby-property-values-evidence-shows-contrary-to-popular-belief/

https://www.strongtowns.org/journal/2022/1/18/what-would-mass-upzoning-actually-do-to-property-values

https://voiceofoc.org/2021/08/jamieson-increasing-densities-in-single-family-neighborhoods-would-increase-land-values-make-housing-more-expensive/

https://voiceofoc.org/2021/08/jamieson-increasing-densities-in-single-family-neighborhoods-would-increase-land-values-make-housing-more-expensive/

Also, increasing allowable density city-wide will open better housing opportunities to all and destigmatize affordable housing residents. It will address the baked in ongoing classism in the City and its racist legacy during the Sundown Town era.

We don't have the water or power to add additional housing units

Housing not lawns is the rejoinder. Indeed, half or more of the water is used outside to water lawns. If the lawns had housing on them, water use would not increase. Indeed, more than half the people dwelling in multi-unit housing in South Pasadena use only half the water used by the less than half that live in single family homes. That's because half the water use at the average-sized single family residence is used to water lawns.

In fact, one study shows that on R-1 lots in the area, as much as 70 percent of water use is for lawn irrigation.

https://deeply.thenewhumanitarian.org/water/community/2017/08/09/city-wide-study-shows-how-much-water-urban-landscaping-really-uses

Lack of Power

California utilities are in the midst of major distribution circuit upgrades to increase capacity to deliver power. The California Public Utilities Commission and California Independent System Operator require utilities to show they have enough power for each coming year by performing a "resource adequacy study." To pass the test, the utilities must show they have adequate power purchase contracts for a one-in-ten-year weather event. Utilities also are subject to long-term transmission planning requirements, as well as power procurement requirements.

Overwhelming Transportation Infrastructure

Look Ma, no traffic. A Montreal residential neighborhood at rush hour in fall of 2022.

Contrary and seemingly counterintuitively, density does not necessarily result in increased traffic. Instead, low density single-family development increases traffic. Montreal is a case in point. The four million who live within the city limits there get around by walking, biking, and riding the clean, well maintained, and extensive subway system. Retail, including supermarkets, drug stores, etc. are scattered throughout the city. This has enabled Montreal to minimize the space it allocates for the auto compared to the typical U.S. city, particularly in suburban areas. That has opened up public spaces, which are distributed throughout the city.

Indeed, a new study conducted at U.C. Davis recently showed that increased density will help meet greenhouse gas and other air pollution reduction goals by minimizing the need to drive, even in electric cars. This will help reduce dependence on foreign metal mining for batteries, magnets, etc. used in electric vehicles.

https://www.theguardian.com/us-news/2023/jan/24/us-electric-vehicles-lithium-consequences-research

https://www.climateandcommunity.org/_files/ugd/d6378b_3b79520a747948618034a2b19b9481a0.pdf

Impact on Schools & Open Space

Schools have the ability to expand by building up. Schools also can cooperate with the City to close streets to expand playgrounds and athletic fields. In fact, SPUSD did this when South Pasadena Middle School was rebuilt more than 15 years ago. Moreover, even South Pasadena freeway fighters who support maintaining R-1 zoning have touted closing the 1-710 stubs in Los Angeles and Pasadena, respectively, to expand the Cal State Los Angeles campus and to create new park space in Pasadena. Why not expand elementary school campuses by closing or narrowing adjacent streets where possible.

In addition, areas in Garfield Park under the SCE lines and also areas around the periphery of the fields in the Arroyo could be used to site local basketball courts, etc., or additional community gardens. They are not well maintained and are under-utilized. At one point the updated general plan, which still is pending years later, contemplated placing a walking trail under the SCE lines paralleling Fair Oaks in the Marengo District. It hasn't been done or pursued as the general plan remains in limbo after years of discussion.

Conclusion

To conclude, we are only limited due to our limited way of viewing the world, despite that those voicing opposition to density claim they back expansive thinking. By increasing allowable density citywide and by beginning with seeing that quads, triplexes, etc. are built on the vacant Caltrans lots where feasible, South Pasadena can begin to address the complex of interrelated problems that we all want to solve. However, if South Pasadena and hundreds of other cities continue to do what they have in the past, the problems will continue to grow and make life—with its traffic, pollution and climate change, homelessness, and social inequity—worse and worse. We can either be part of the solution or part of the problem. That's why we must look ourselves in the mirror and decide to truly bring about the change that is so clearly is needed and so long forestalled.

Bill Kelly
South Pasadena Resident

- **How addressed:** The City Council has made no determination regarding the purchase of the surplus Caltrans property or the specific use of the properties. The City is still analyzing the financial feasibility of purchasing the properties and the various options for converting them to affordable housing. The City cannot commit to a specific course of action for the surplus Caltrans properties until that analysis is complete. Staff will explore possible solutions. The remainder of the comment does not include any proposed changes to the Housing Element, but supports many of the policies already contained in the Element.

Jeremy D (March 6, 2023)
I would request the city change the following section of the housing element to limit the area that would allow up to a four-plex to parcels on major traffic corridors only, like Huntington, Fremont and Fair Oaks or near the Metro station. Also, since the city currently has a height limit, I would recommend removing the mention of buildings that are above the current limit until the time when the voters have had a chance to weigh in on this.

Page 26:

Additionally, the City will permit "Missing Middle" housing types in all residential zones citywide, except for in high fire hazard areas. Missing Middle housing types shall include duplexes, triplexes, four-plexes, courtyard buildings, and cottage courts. The City will adopt objective design standards for each housing type.

- **How addressed:** The Housing Element was revised to reduce the area where missing middle housing will be allowed from citywide to the high-quality transit areas within the city. This revision was released for public review on March 7, 2023. Program 2.n does not change the height limit, it commits the City Council to bring forth a voter initiative to consider repealing or replacing the height limit and provides a new height limit if it is replaced. The Housing Element establishes a program for the voters to decide whether to establish a new height limit to achieve the densities required to meeting

the RHNA housing goals. Pursuant to the Court order in the existing litigation regarding failure to adopt a compliant Housing Element by the statutory deadline, the City is required to place a measure on the ballot to revise the height limit for residential uses. If the voters do not increase the height limit in certain areas, other zoning-based measures (such as conversion of current low density areas into higher density areas) will need to be analyzed and submitted to HCD for review.

Josh Albrektson (March 11, 2023)
This e-mail is CCed to City Council. SoPas planning Staff, and HCD. This is meant mostly for HCD.

There are two major problems with the 4th draft South Pasadena Housing Element. At first I thought they were mistakes but after my conversation with SoPas staff on Wednesday I realized they were intentionally done.

South Pasadena's housing element should not be accepted without these being changed, and it is my hope that South Pasadena changes them before the Housing Element is submitted on Monday. I told them they needed to fix it at our Wednesday meeting and in a subsequent e-mail.

1. The city is using intentionally low FAR to ghost zone the 70 DU/Acre and 110 DU/Acre and make them not feasible.
The March 2nd draft had FARs of 7.0 and 10.0 respectively. They released a new draft on March 7th that changed it to 2.5 FAR. That 2.5 FAR makes 70 and 110 impossible to build and staff knows this.

815 Fremont Ave is a 50 unit density bonus project approved by South Pasadena in April 2022. It has a FAR of 3.3, a density of 61.7 DU/Acre, and a height of 56 feet.

This is a real world example of the FAR needed to build in South Pasadena. Based on this approved project, the FAR for 70 DU/acre should be at least 3.75 and for 6.0 FAR for 110 DU/Acre.

The 2.5 FAR makes both of these densities impossible and the Housing Element needs to be changed to at least the numbers I listed above.

I raised this issue with SoPas staff at my 3/9 meeting, and I found out this was intentionally done.

When I told Allison Becker (AB) that the 2.5 FAR made 70 and 110 infeasible, she told me that General plans, specific plans, and housing elements need to be internally consistent and they changed it to 2.5 FAR because that is what was in the 2020 proposed Downtown Specific Plan (DSP).

I told her that was BS, because the Housing Element was going to have densities of 70 and 110, and if you actually wanted the documents to be internally consistent than the FARS needed to be changed because the 70 and 110 are going to be in the Housing Element and the FAR should be changed to be consistent with the required density.

She then changed her response to say that the community didn't support over 2.5. AB stated 2.5 FAR is what the community agreed to in the DSP in 2020.

AB and Grant Henninger (GH) then stated that the 2.5 FAR is there because of the 45 foot height limit and when the community votes to raise the height limit there will then be a discussion at that time with the community as to what the appropriate FAR should be.

Of note, I have an e-mail from Woody Tescher of Placeworks who wrote our 2020 DSP. The reason he said 2.5 FAR was picked was because that is the biggest building that could be built with 50 DU/Acre and 45 ft height limit. If that is the biggest that can be built under those conditions, then 2.5 FAR is absolutely inadequate for 70 Du/acre and 110 DU/acre at 84 feet.

This kind of ghost zoning is just as bad as their repeated claims that 70 DU/Acre was feasible under the 45 foot height limit and the Housing Element should be changed so that the FAR allows the density stated in the Housing Element to be built. It should be 4.0 for 70 DU/Acre and 6.0 for 110 DU/Acre.

2. SoPas is intentionally setting the zoning for site 3, Pavilions, significantly under what the owner's representative stated was needed for financial viability.

At the Feb first City Council meeting SoPas asked the owner of Pavilions to give a public comment stating that they wanted to redevelop the property and was not concerned about parking during construction. Mr Anderson, the owners lawyer, went much further than that.

Here is the link to the video. Starting at 2:07:30 he gave a 3 minute public comment and then at 2:12:08 he was called back to answer a question from Council Member Braun until 2:14:00. I really encourage you to listen to everything he said.

http://www.spectrumstream.com/streaming/south_pasadena/2023_02_01.cfm

He said he was asked to sign a letter stating intent to redevelop and he did. He also said that he REPEATEDLY told SoPas staff that the zoning proposed in previous housing elements were not financially viable.

He said that the only way they would redevelop the property with housing is if they could replace the grocery store with a bigger grocery store and they were very interested in that.

He also stated that they needed 150-160 DU/acre for the zoning and 140 DU/acre was the absolute minimum needed for financial viability. He also said they could do it at 84 ft.

South Pasadena is zoning this lot for 110 DU/Acre and this is intentionally below what Mr. Anderson said was needed to be viable.

In the March 2nd draft the zoning was 10.0 FAR, 110 feet. and 110 DU/Acre. In the March 7th draft they changed it to 2.5 FAR, 84 feet, and 110 DU/acre.

In my meeting with SoPas Staff I told them that with the changes they were now zoned for less than the very specific requirements Mr. Anderson stated.

AB told me that they had removed Pavilions, like I asked them to. I said no you didn't. It is still there. AB said well they planned to. GH interrupted her and said that they should have this conversation offline.

It appears that there had been discussions in SoPas staff to remove site 3 with the zoning proposed.

AB then asked me "Well, don't you think that this was just an ambitious proposal from the owner used as a negotiating tactic??"

The goal of a Housing Element and SoPas staff should be to actually have the housing be built. It should not be a negotiation with the owner to make the feasibility of a project so low with the least amount of apartments so that the project may or may not be built. This site is one of the best sites to build housing in all of SoPas and SoPas should be doing whatever is possible to put the most possible units on this site.

Instead they are intentionally making sure the zoning would not allow redevelopment.

This Housing Element should be rejected unless South Pasadena zones this site for 160 DU/acre as Mr. Anderson specifically stated was required.

Josh Albrektson MD
Neuroradiologist by night
Crime fighter by day

- **How addressed:** There is no intent by the City to make sure zoning standards do not achieve stated Housing Element goals. The City is committed to taking such actions within the required 120 days post-adoption to amend zoning and other codes to address the goals of the Housing Element.
- **How addressed:** The stated FAR and other development standards outlined in Program 3.b of the Housing Element are consistent with the current height limit. When adopted, within 120 days after adoption of the Housing Element, the General Plan, Downtown Specific Plan, and other zoning amendments will need to be consistent with the current height limit. If the height limit is repealed or increased through voter initiative, development standards for affected zones with residential uses will be updated to be consistent with the new height limit within 120 days thereafter.
- **How addressed:** This draft of the Housing Element represents a significant increase in the density allowed on Site 15, from 70 to 110 du/ac. At the February 1st City Council meeting, the representative of this site indicated that they analyzed the site's feasibility using the existing inclusionary requirement of 20%, as well as a higher requirement of 30%, and under those requirements would need at least 140 du/ac to make redevelopment of the site be feasible. The City is reducing the inclusionary requirement to 15% and providing significantly more incentives and reduced development standard requirements to ensure that redevelopment of sites like this one are feasible. Furthermore, this site is not necessary for the City to meet its RHNA numbers, and instead the site only adds to the City's RHNA buffer.

Mike Thurman (March 12, 2023)
Hi Michael!

I wanted to reach out and share my thoughts on a win-win approach to meeting the State's housing element requirements. I looked over the City's draft proposal and was surprised at the low estimate for ADU conversions (50 over the next eight years) in meeting the 2,067 additional unit requirement.

I believe that our city has hundreds of unpermitted ADU units that are currently fully occupied by low-income residents that are not being counted because of their status. Issuing permits for these fully-occupied units would immediately:

1. Lift the City's count of the number of low-income residents that currently live in these units.
2. Increase homeowner property values by increasing the habitable square footage of their properties.
3. Allow homeowners to fully insure their properties for the full replacement value of their properties, including the ADU units.
4. Avoid any new construction and associated impacts for these additional units.
5. Avoid any new parking impacts for these existing units where residents are already housed.

City leadership may be under the impression that the City's previous efforts to encourage ADU conversions generated only limited results, and therefore this might not a viable option for generating significant additional low income units. However, that impression is incorrect.

Based on my own experience, although City staff prepared a brochure and encouraged residents to apply for ADU conversions, suggesting these would involve low-cost and low-documentation reviews, in fact once the Building Department became involved it immediately become apparent that the costs associated with the conversion, including completion of a complicated application and architectural and structural engineering plan requirements, would be prohibitive, and my hunch is that the City received very few applications from that effort.

However, it is important to appreciate the fact that all of these unpermitted units in South Pasadena are already occupied, meaning that this prohibitive ADU conversion process has simply prevented existing units from being permitted and has guaranteed that they remain uncounted.

Another unfortunate reality is it appears from the Report that the City has no accurate count of the number of these units in the City. I firmly believe there are at least a dozen of these units located in just my neighborhood, one street within the City. My sense is this could, and should, be a much more significant element in the City's plans for complying with the State requirements.

I believe our City could make a significant dent in meeting the State's additional housing requirements, and at the same time support many of our homeowners, by carefully examining the ADU conversion process, simplifying it and providing additional resident support in the process. I can foresee (and will volunteer to lead or be part of) a citizen-led promotion of such a program to encourage and maximize ADU conversion application submissions by South Pasadena residents who own these units.

Thank you for considering these thoughts and for your continued service to our City. Please feel free to contact me with any questions or feedback on this issue.

Best wishes to you and your family,

Mike Thurman

michael@thurmanlegal.com

- **How addressed:** The Housing Element includes a significant discussion of the City's existing ADUs, as well as projected ADUs accounting for a portion of the City's RHNA requirements. Additionally, the Housing Element includes programs to encourage and monitor the construction of ADUs to ensure that ADU production meets the projections throughout the planning cycle.

Re: South Pasadena Housing Element, Fifth Draft (March 7)

Dear Ms. Frausto-Lupo:

We are dismayed by the City of South Pasadena's unilateral revisions of the Fifth Housing Element draft between March 2 and March 7. These changes set back progress on the development of the 20 vacant Caltrans properties. The City is no longer committing to converting these properties to affordable housing on site and, instead, is returning to entertaining "alternative solutions" to Senate Bill 381.

The Caltrans properties are the only certain parcels of land for the development of 100% affordable housing in the foreseeable future in South Pasadena. Other programs and sites identified in the Housing Element are only ideas for potential developments. Similarly, zoning, building, and other code changes will not guarantee affordable housing development, functioning only to support and incentivize prospective projects.

The City's March 7 revisions to the Caltrans properties continue the City's decades-long history of racial and economic exclusion and do not affirmatively further fair housing.

It comes as no surprise that both the March 2 and March 7 drafts also fail to address our comments about the City's use of historic preservation policies. The City will continue to use these policies to impede affordable housing development and maintain much of its racial and economic exclusion in higher resource neighborhoods. And, the City has no plans to stop doing so.

Worse, not only is the City attempting to skirt existing laws on fair housing and Caltrans properties, but the City has also eluded the public participation process required for the Housing Element. Nothing in the March 7 version explains why the City made significant revisions from the March 2 version. Prior to March 2, the City held three public meetings on February 1, 9, and 15 to receive public comment and to direct City staff on how to revise the Housing Element. The March 2 version reflected these discussions. We can reasonably surmise that between March 2 and March 7, the City received comments from residents and Councilmembers and changed the draft accordingly, outside of the public process. The City must disclose in this draft, with opportunity for public comment, all communications it received pertaining to the fifth Housing Element draft.

Program 1.b. – Convert Caltrans Homes to Affordable Housing

Constructing affordable units on the Caltrans sites is critical to bringing in any new affordable units in the City because there are no other sites in the City that are already obligated to hold 100% affordable housing. While the City committed to converting Caltrans homes to affordable housing on site in the

March 2 version of the Housing Element draft, it completely changed course on March 7. **The City should adopt the March 2 version of this program.**

In the **March 2 version**, the City wrote:

> [T]he City *will* construct additional units, either as ADUs or Missing Middle housing, on *the parcels* to provide additional lower income units if feasible. These additional units are not accounted for in the City's RHNA calculation, and will provide an additional buffer if constructed.

Redline Version, p. 266 (emphasis added).

> In the **March 7 version**, the City added a new provision about alternatives to Senate Bill 381, and walked back its commitment to construct additional units on the sites of the Caltrans properties:
> To ensure the financial feasibility of acquiring the unoccupied properties and in turn leveraging them to expand housing opportunities in South Pasadena, staff will explore whether there might be any *alternative solutions to those provided by SB 381* that respond to the cost constraints of particular properties.
>
> . . .
>
> [T]he City *may consider* the construction of additional units, either as ADUs or Missing Middle housing, on *certain* parcels to provide additional lower income units if feasible. These additional units are not accounted for in the City's RHNA calculation, and will provide an additional buffer if constructed.

Redline Version, p. 267 (emphases added).

Senate Bill 381 is not just one option for the disposition of the Caltrans homes. It is the only option because it is the law that governs what the City must do upon acquiring the homes from Caltrans.

In a March 8 meeting with Care First, City staff shared it is the City's intention to comply with the spirit of Senate Bill 381—to convert the properties into affordable housing—but also it would like to explore "alternative solutions" for certain properties. These are contradictory goals. The City identified exempt properties to include ones that have the main subject of community debate: those located in the City's higher resource neighborhoods. When we asked for the City's inspection reports and other documents they are relying on to determine the feasibility of development, the City declined to share this information.[9] The City fails to provide any evidence in this Housing Element to support its conclusions that some properties are not financially feasible for development.

As explained in our December 8, 2022, comment, the City has not disclosed legally viable "alternative solutions" to the public. Mayor Jon Primuth, alongside Cultural Heritage Commission Chair Mark Gallatin (who simultaneously sits on the board of the private non-profit organization, the South Pasadena Preservation Foundation), has publicly advocated for these solutions, despite the City Attorney's opinion that these alternatives are unlawful.[10] One such alternative is selling the Caltrans

[9] The City has approved contracts for inspection services. See Agenda Items 22 and 23, City Council Meeting, July 20, 2022, https://www.southpasadenaca.gov/home/showpublisheddocument/30038/637934174414530000.

[10] On November 2, 2022, then-Mayor Pro Tem Jon Primuth, as one of the two members of the SB 381 implementation committee, stated at a city council meeting: "There's a proposal that we look at an alternative to SB 381. We are exploring

properties through a double escrow process and selecting preferred homebuyers vetted by the Cultural Heritage Commission. Again, Senate Bill 381 does not allow for this or other alternatives. Moreover, the Cultural Heritage Commission, which has a mandate to enforce the City's historic preservation laws rooted in racial and economic exclusion, must not be allowed to participate in any homebuyer selection process.

If the City insists on continuing to explore "alternative solutions" to Senate Bill 381 in the Housing Element, it must explain what these alternatives are and why they are legally viable. Otherwise, the Department of Housing and Community Development should not approve this Housing Element which contains policy decisions that violate the law.

Program 3.m. – Implement SB 9 and SB 10

In the **March 2 version**, the City proposed to permit Missing Middle housing types "in all residential zones citywide, except in high fire hazard areas." The City did not specify the types of Missing Middle housing types for each category of residential costs, only that they could include duplexes, triplexes, four-plexes, courtyard buildings, and cottage courts.

In the **March 7 version**, the City narrowed the Missing Middle zones to "low density residential zones along high-quality transit corridors and/or transit stops, except for in high fire hazard areas." At this time, our position is neutral on these changes. However, we note several areas for improvement and change:

- Specify Missing Middle housing types to include triplexes and fourplexes. Without concrete commitments on density, the City risks falling short of its promises to allow for greater density

---

that as one of our options as well." See http://www.spectrumstream.com/streaming/south_pasadena/2022_11_02.cfm# (starting at approximately 02:44:00).

Yet about two months prior, Primuth conceded in an email to local residents that these alternatives to SB 381 are not legally viable:

> The dilemma of what to do now under the requirements of SB381 is real. But there is a persistent talk that SB381 is optional. That's not my interpretation of the law. It's not our city attorney's interpretation of the law. It's the interpretation of the attorney designated by the SPPF [South Pasadena Preservation Foundation] proponents for the city to retain to obtain independent advise [sic]. All the public comment we will receive tonight is based on a false assumption, repeated against the overwhelming legal counsel they have received. I've spent hours exploring the option presented by SPPF in many public comments. I pointed out the problems and dead ends with their legal strategy. I've obtained a concession from a prominent SPPF member that their route requires bending the rules. There has been no concessions from the SPPF proponents. I am sorry to go on the record to criticize them, as they are fine, trustworthy friends and neighbors.

See Attachment 1 (November 2, 2022 email).

On December 7, 2022, Mark Gallatin made public comment at a city council meeting (starting at 1:04:00) sharing that the South Pasadena Preservation Foundation had "nominated the Caltrans homes in the historic 710 corridor . . . for inclusion on the 2023 list of America's 11 Most Endangered Places [maintained by the National Trust for Historic Preservation]." During the 710 freeway fight, designating South Pasadena as an endangered city was of "invaluable assistance" to keeping the freeway away. Gallatin continued in his comments: "We need nationwide attention again to return our historic neighborhoods to pre-Caltrans conditions and get the houses sold." Returning historic neighborhoods to pre-Caltrans conditions is code for maintaining their high income levels at the exclusion of lower income households and, as a result, disproportionately excluding Black and Latinx people. See http://www.spectrumstream.com/streaming/south_pasadena/2022_12_07.cfm.

in these targeted areas. For example, if the City only allows for duplexes, that will not be financially feasible for developers and will not result in greater density.

- Designate upzoning as the default policy (not an opt-in program). Staging this as an opt-in program creates another administrative hurdle in the development process rather than streamlining it; thus, this component of the program should be removed.
- Define "high fire hazard areas." The City leaves "high fire hazard areas" undefined in this draft. Based on the City Council and staff's public outreach discussions (e.g., Special Joint Meeting of the City Council and Planning Commission, February 15, 2023), the intent of this provision is to account for areas that have a high risk of fire. This provision should be narrowly interpreted and should not be used broadly to designate as many neighborhoods as possible as high fire hazard areas.

  The City currently defines the High Risk Fire Area as those properties located south of Monterey Road, extending to the city border, and west of Meridian Avenue, extending to the city border. This is broad and vague, with little empirical data to back these findings. The City lacks the specificity found in the surrounding municipalities (see https://egis.fire.ca.gov/FHSZ/) and should not use this means of determination. It would be more appropriate to examine these based on street width and availability of fire hydrants. Further, any measurable risk determination should shape the design methods used not prevent development. This blanket designation fails to acknowledge the many existing construction methods that can mitigate these risks.

- While the City is separated into zoned parcels (RE, AM, RS, RM, RH, MSSP), the City is not utilizing data that correlates household demographic information to these parcels. The City is using census tract data boundaries to define that demographic data. That is entirely inadequate, given that the city only intends to increase density along transit corridors.

  The parcels that currently contain the most demographic diversity will have their densities increased while the more homogenous regions will remain significantly lower – despite their proximity to available resources and their relatively flat topography. The largest, flattest, lots in the City are currently zoned RE – and the current draft of the Housing Element largely omits those lots from any future density development. Given the small area of the City, restricting density to transit corridors largely serves the purpose of keeping density contained where it currently exists.

- Allow lot subdivisions. Another inadequate method being proposed is the use of SB 9 lot splits to achieve greater density. To date there has not been a single SB 9 lot split approved in the City. Studies have shown that the legal requirements of SB9 splits make them prohibitive (see https://ternercenter.berkeley.edu/research-and-policy/sb-9-turns-one-applications/). South Pasadena relies on this inadequate method because there is not true intention to allow for more diverse development. The underlying principle in the city's programming is that current property owners can increase density via ADUs. But this does not provide equitable pathways to ownership and upwards mobility, it reinforces existing socioeconomic boundaries. A much more equitable means would be allowing lot subdivisions. The city's Housing Element has only allowed for lot consolidations along existing corridors.

Goal 6.0 – Expand and strengthen tenant protections for South Pasadena's existing renters
Program 6.a – Rent Registry

Program 6.b – Right to Return Policy
Program 6.c – Relocation Assistance
Program 6.d – Rent Stabilization

We are thrilled the City has included a comprehensive package of tenant protections in this draft of the Housing Element. The City's commitment to establish a rent registry sets itself up to monitor the rental market in South Pasadena and to effectively enforce these tenant protections. By establishing several new tenant rights—right to return, relocation assistance, and rent stabilization—the City will be actively preserving affordable housing and ensuring housing stability for thousands of South Pasadenans. While we applaud the City staff's efforts thus far to research, develop, and propose to City Council these policies, the draft should contain a firm date on implementation for each policy to ensure Councilmembers follow through with their commitments. The implementation date for all policies should be no later than the end of December 2023.

Thank you for considering our comments.

Sincerely,
Care First South Pasadena

- **How addressed:** The City Council has made no determination regarding the purchase of any of the surplus Caltrans properties or the specific use of the properties. The City is still analyzing the financial feasibility of purchasing the properties and the various options for converting them to affordable housing. The City cannot commit to a specific course of action for the surplus Caltrans properties until that analysis is complete. Staff will explore additional possible solutions.
- **How addressed:** The Housing Element does specify which types of missing middle housing will be allowed, including tri-plexes and four-plexes. As noted in the letter, the City does have a current definition of "high fire hazard areas."
- **How addressed:** The Housing Element includes significant areas of Very Low and Low Density Residential uses where missing middle housing will be allowed, all within ½ mile of high quality transit corridors along Fair Oaks Avenue and Huntington Drive.

Gail Maltun, et al (March 12, 2023)
Dear City Manager Chaparyan , Council Members and City Planning Staff,

We are writing to express our profound dissatisfaction with the 5th Draft of the Housing Element. While we understand that South Pasadena has been mandated by the State to provide more than 2,000 units of housing, we strongly believe that this can be achieved without the ill-conceived and draconian solutions proposed in this draft.

We are further distressed by the City's failure to present this Draft to the citizens of South Pasadena. The housing policies proposed in this document will drastically alter the architectural character of our City. Despite this, the Draft was released only to people who had previously signed up for updates on the Housing Element. That email went out on March 2, notifying us that comments on the more than 500-page document would be due in less than a week. The Neighborhood Pulse, distributed to the community by the City, included a cheery note about South Pasadena's 135th Birthday, but not a word about the Housing Element.

A few of our major objections are detailed below:

- The new height limit is dictated to be a minimum of 84 feet. We support a modest increase in height to allow for well-designed four and five story buildings, but 84-foot buildings—with 110 feet mentioned elsewhere--would drastically change the character of our town.
- In Program 3M, titled "Implement SB9 and SB10", you commit the City to participating in SB 10. This is a voluntary program that the City had previously vowed to opt-out of. SB 10, as you know, will allow massive upzoning (with CEQA exemptions) of much of the City—anything within ½ mile of the Gold Line Station and possibly within ½ mile of major bus stops as well.
- An "Affordable Housing Overlay"—otherwise known as rezoning—has been proposed in Program 2J/k. This overlay would allow "up to 30 units per acre" in "selected sites outside of the Downtown and Mixed-Use districts". Where this upzoning might land is completely unspecified: it might be on any street in town.
- The City commits to building "100% Low Income" units on several City-owned properties in the Downtown district. This is just terrible, outdated planning. Low-income units need to be incorporated into buildings that also include moderate and market rate units. To do otherwise is to stigmatize the residents of the low-income buildings and to create contemporary versions of the blighted "projects" of decades past.
- The "missing middle" units may sound great in concept, but what that means is eliminating single family zoning in a very large portion of the City. We believe most residents will find this objectionable.
- Perhaps our largest objection is the complete and intentional elimination of the more than 30 acres of City-owned land in the Arroyo from any consideration for development. The Arroyo Seco Golf Course and the Stables constitute, by far, the largest undeveloped land in the City. They could accommodate the development of many hundreds of housing units – and produce a huge financial windfall for the City in a potential joint venture with a developer. These properties are used by relatively few South Pasadena residents. Golf courses are water-guzzling facilities that are being redeveloped for housing throughout the State. The Stables are used primarily by upper-income horse owners, with stable prices ranging from $685-$785 per month, per horse. And the stables and golf course generate very little income for the city. Despite these properties being characterized in the report as open, natural space, neither are "natural space," and both are fenced off from the general public. Unlike the playing fields and park in the Arroyo, neither the Stables nor the Golf Course should be considered sacrosanct. The Arroyo, both in South Pasadena and in the City of Los Angeles, already contains both single-family and multifamily housing. In the course of public meetings, both the stables and the golf course were proposed for housing sites. If we have to choose between putting housing on these two sites and eliminating single-family residential zoning in most of our city and allowing □-10 story buildings, we believe the wiser choice is clearly to develop the stables and golf course properties. That the City excluded these two properties from our planning for housing at a time when the State is demanding more than 2,000 new units in our community demonstrates a level of ineptness and lack of imagination that borders on malpractice.
- We also object to the general tone of self-flagellation that permeates the document. The inclusion of the excerpt from "When South Pasadena was a Sundown Town", by Jerry Friedman (P. 104), and the heavy emphasis on our 70-year-old "Sundowner" past, in Section 6.4.6, "South Pasadena History," is a biased, one-dimensional view of our City. It ignores the fact that we long ago evolved into one of the most racially, ethnically and economically diverse

cities in the area. Moreover, it is irrelevant to the task that the State has asked us to execute: namely, locate sites for 2,000 housing units: nothing more, nothing less.

It will be difficult to incorporate more than 2,000 new housing units in South Pasadena in the next few years. No one thinks this task will be easy. But we believe that it is possible to do this without destroying the architectural character of South Pasadena. By adding the Golf Course and the Stables to the sites available for development; by concentrating larger multifamily complexes that combine lower/moderate/market units on major streets such as Huntington and Fair Oaks, the Ostrich Farm area, and the Gold Line Station area; and by a modest increase in height limits to allow well designed four and five story buildings in selected sites—we think that we can achieve a successful Housing Element that will spark a more vibrant downtown while preserving our peaceful streets and small town character.

- **How addressed:** The City held three public meetings to discuss the changes made in this draft of the Housing Element, and ensured the community had ten days to provide public comments. The City has a requirement to address issues related to Affirmatively Furthering Fair Housing and to accommodate the number of homes allocated to it through the Regional Housing Needs Allocation process. The policies in the Housing Element fulfill those requirements.

Julian Petrillo (March 13, 2023)
Hello there. Julian Petrillo here, going on 25-year resident of South Pasadena. Recently it came to my attention that there's a draft of a new SP housing element which would consider allowing multi-unit dwellings just about anywhere, and also that height limits of 7-10 stories are under consideration. These policies will change the way of life that all residents of 91030 prioritize and strive for when they pay their significant property taxes. I urge the city and staff to find another way to meet occupancy and density requirements, rather than taking on new regulations such as those.

Thank you for your consideration.

Julian Petrillo
800 Adelaine Avenue

- **How addressed:** The City is required by the State of California to address issues related to Affirmatively Furthering Fair Housing, and in addition to accommodate the number of affordable homes and total number of homes allocated through the Regional Housing Needs Allocation (RHNA) process. The City must then demonstrate plans which can accommodate these three housing goals.The policies in the Housing Element fulfill those requirements.

Mary Urquhart (March 13, 2023)
The 5th Draft on Housing Element is nearing its completion. However, I did want to make an additional comment before the final deadline.

We have City properties that should be considered when developing additional housing in order to provide affordable housing for City staff and the community at large. These properties could be considered alternatives to other options already identified by the City. We currently have an 18-hole golf course, which could be turned into a 9-hole golf course to allow for a girls' softball field and possibly another playground and outside tennis courts. That would allow the city to build additional housing and affordable housing on the City-owned site located at 1102 Oxley Street, which actually "fronts" the intersection of Mission Street and Orange Grove Avenue, adjacent to a softball field and playground. The mechanical repair and storage building at that location should be moved to a

location outside of the area so critical to transportation. The community building at that location needs significant repairs and has limited historical relevance. A conversion to housing, moving the recreation facilities to the golf course area, would be a great solution. Using a 'layering approach' we can be creative to redesign this area to respect the adjacent homes and helps solve our housing crisis. The proximity to the train station is key, and there is close access to the 110 Freeway.

Changing single-family residential neighborhoods to densify our city should change only after we have exhausted all available corridors on Fair Oaks, Huntington Drive, Mission Drive (west of The Gold Line), and the Arroyo.

Thank you for your consideration,

Mary Urquhart

- **How addressed:** The golf course was considered as a housing site during the February 1st City Council meeting. The City Council directed staff to find alternative to accommodate the city's housing needs that did not remove recreational open space from the city. However, the City is committed to continue to analyze additional sites, including potential sites in the Arroyo. As the Housing Element is part of the General Plan, it must be consistent with other General Plan elements, including the Open Space Element which requires sufficient recreational space for the residents of the City. However, the City is committed to continue to analyze additional sites, including potential sites in the Arroyo in the future.

South Pasadena Tenants Union (March 13, 2023)

Re: AMMENDED 5th Draft Housing Element – Public Comment

Dear Ms. Becker and Ms Frausto-Lupo:

After further contemplation, South Pasadena Tenants Union leadership is submitting this amended public comment on the March 7, 5th Draft Housing Element.

We are pleased to have reviewed the March 2nd, 5th Draft of the Housing Element. It was/is a bold and expansive housing element, one which might even be the best in the Southland. We applaud staff for the inclusions of the tenant protections and the acknowledgment that preserving affordable housing is a priority in this process. We look forward to working with the City, the residents of South Pasadena and the Council to ensure that these policies are the best that they can be and are enacted effectively and within a timeframe that is beneficial to those whom they are intended to protect: the 53.5%.

We are not happy to learn that the original draft of March 2nd was substantially revised and without any published responses/comments indicating public input. In reviewing the March 7th redline version, we oppose the proposed program addressing the fate of the CalTrans homes. In this draft, the proposed implementation of SB381 has changed drastically from the March 2nd version. It is our understanding that there are no legal alternatives to SB381 and therefore we are stymied by this latest

change and urge the City to revise the draft submitted to HCD to include the original text from March 2.

With regard to the revision indicated by the March 7 version for citywide fourplexes, also significantly different from the March 2nd draft, we find that we can remain wholly supportive of the current proposed change. In order to ensure that the City can maximize housing for lower wage earning residents and middle income residents, we support triplexes and fourplexes being limited to the high transit areas with a rent stabilization ordinance that is fully enacted no later than December 2023. Therefore, our one public comment regarding the most recent March 7 version of the 5th Draft Housing element is below:

For program 6.d, SPTU asks that you include within the 5th draft implementation of a rent stabilization ordinance by December 2023.

South Pasadena Tenants Union looks forward to seeing our input included with the expediency that other revisions have been made in the last few days so that we can comfortably and wholeheartedly commit our support of the 5th Draft to HCD. We are aware that at least one Councilperson had requested that her constituents oppose major components of the March 2 draft with letters to the City Manager. Within hours of that email being circulated, the March 7 redline version was published.

South Pasadena Tenants Union expects that the City act in good faith and weighs our input equally to that of other influencers in the community by including our abovementioned request.

If you have any questions or would like to discuss, I look forward to hearing from you. I can be reached Anne Bagasao at eabagasao@hotmail.com or by phone at 626-660-8837.

Sincerely,
Anne Bagasao, Co-Founder

- **How addressed:** The timeframe for Program 6.d requires that City Council consider a rent stabilization ordinance no later than December 2023.

Joanne Nuckols (March 13, 2023)
I am opposed to any unbundling or separating of parking from any housing development as on page 153 referencing Downtown Specific Plan. This would be a disaster with many unintended consequences. Any reference should be removed from the HE draft unless and until there is a thorough study of the negative impacts of doing so.

Joanne Nuckols
South Pasadena

- **How addressed:** The Housing Element incorporates existing California law with regards to parking in proximity to high-quality transit.

Ed Elsner (March 22, 23, and 24, 2023)
[**Note from City:** The City received three comments from this commentor over the course of three days all on the same subject. All three comments are shown below, and only one response is provided to these three comments since they deal with the same subject.]

March 22, 2023 comment letter
Dear Director Frausto-Lupo,

The draft housing element's rezoning capacity analysis (Table VI-51) is seriously flawed.

The table undercounts existing housing units. For example, every listed site whose current land use is High Density Residential is incorrectly shown as having "0" existing units. This error means that thousands of existing units have not been counted, and that the total Maximum Additional Development Capacity for the listed sites is therefore overstated by the same amount.

On the other side of the coin, the Table VI-51 miscalculates the total Development Capacity Adjustment for every listed site with a residential zoning capacity of 50 du/ac or more. Although these sites are ostensibly given a 400% development capacity adjustment, the 400% adjustment is not included in the calculation of the total adjustment for any site, resulting in the understatement of total Anticipated Development Capacity by hundreds of units, possibly more. Anticipated Development Capacity is perhaps the most critical metric in the housing element.

These errors have obvious and serious implications for policy making.

For example, as a last-minute addition to the draft housing element, the rezoning of Huntington Drive (to mixed-use with 70 du/ac density) will promote the displacement of many residential tenants. As a practical matter, the displacement will be permanent, for the reasons discussed in my previous comment published at page B1-234 of the draft. The human impacts of mass eviction and involuntary displacement can be devastating, and the decision to rezone Huntington Drive was a rushed decision that was not supported by reliable data.

Every listed Medium Density Residential site and High Density Residential site whose existing unit count is shown as "0" or "1" is suspect and should be checked by searching the APN on the County Assessor's online portal (https://portal.assessor.lacounty.gov/). The existing unit count for each site should be updated as necessary.

Also, the 400% density adjustment should be included in the total development capacity adjustment for every listed site with a residential zoning of 50 du/ac or more. There is likely a formula error in the spreadsheet that needs to be resolved.

Once these errors are fixed, a determination should be made whether it is really necessary to rezone Huntington Drive to mixed-use, 70 du/ac, in order to meet the city's RHNA obligations. If the city is able to rezone residential sites on Huntington Drive to 30 du/ac (medium density) or 45 du/ac (high density), as it is doing elsewhere in the city, this would minimize the displacement of existing tenants.

Thanks again for your continuing work on the housing element and for your consideration of these comments.

Ed Elsner
edelsner44@gmail.com

March 23, 2023 comment letter
A quick follow up to my comment submitted yesterday:

Once the 400% development capacity adjustment is correctly applied to listed sites with a density of 50 du/ac or more, the new total anticipated development capacity is 3,819 housing units according to my calculation.

To put this in perspective, this is 2641 more housing units than the 1,178 total anticipated development capacity stated in the draft housing element for the sites listed in the uncorrected Table VI-51.

It is also 574 more housing units than the city's entire RHNA allocation of 2,067.

With an accurate count of existing units, the total anticipated development capacity will decrease.

But the magnitude of the capacity adjustment error suggests that the city will be able to meet its RHNA obligations without needing to increase density on Huntington Drive to 70 du/ac.

In any event, I don't think the city should be committing to the rezoning programs included in the draft housing element until a corrected Table VI-51 is reviewed and analyzed, even if that means delaying the submission of the draft to HCD.

Thanks again,

Ed Elsner
edelsner44@gmail.com

March 24, 2023 comment letter
Dear Director Frausto-Lupo,

Thank you again for the opportunity to comment on the 5th draft housing element that will be submitted to HCD later today.

The draft indicates that the development standards for the Huntington Drive zone will mirror the standards for the Mission Street Zone of the Downtown Specific Plan.

One suggestion would be to clarify that with respect to residential parcels in the Huntington Drive zone whose current land use is Medium Density Residential or High Density Residential, a specific allowable density is yet to be determined through a zoning process subsequent to the adoption of the housing element, with input from the community and especially from residential tenants who live on Huntington Drive, who would be at risk of displacement from redevelopment.

Stated another way, the allowable 70 du/ac density for the Mission Street Zone in the Downtown Specific Plan should not be considered an objective general plan standard or criteria for the Medium Density Residential or High Residential Density parcels in the Huntington Drive Zone, but a possible allowable density along with 30 du/ac or 45 du/ac mentioned in my previous comments.

A 70 du/ac density in the Huntington Drive zone should be reserved for existing commercial parcels which would be more suitable for redevelopment as mixed-use projects, and I'm

confident that the city can still meet its RHNA obligations with lower densities for residential parcels on Huntington Drive.

One final suggestion, there should be protections against tenant harassment as part of the package of protections for residential tenants, with appropriate remedies to deter bad actors from improperly influencing tenants to vacate in order to avoid compliance with the other tenant protections the city is proposing.

Thanks again, and best of luck with the submission of the draft.

Ed Elsner
edelsner44@gmail.com

- **How addressed:** City staff met with commenter on 3/24/23, prior to his final comment, to discuss his concerns. Staff acknowledged the limitations of the dataset that is used for the capacity analysis (Table VI-51). Data was pulled from our vendor's site and was not closely screened before building the new table. Staff also acknowledged the possibility of a formula error in the table. Upon further review after the meeting with the commenter, the City's Housing Element consultant determined that there is not a formula error in the table.

  Staff clarified that the purpose of the table was to illustrate the breadth of the future rezoning areas and that the upcoming general plan update process would be used to refine the rezoning strategies. Staff clarified that our obligation with the housing element is to identify areas where development can be achieved and our commitment is to engage in a public process to rezone within the areas identified to accommodate our RHNA obligations with a reasonable buffer in order to produce a responsible long-range general plan.

  Staff addressed the potential impact of rezoning on existing multi-family residential buildings and underscored the City's commitment to developing a slate of tenant protection programs.

  Staff clarified that in the instance of Huntington Drive, the term "mixed-use zone" was used to reflect the existing corridor conditions with comingled multi-family and commercial zoning. New "mixed use" is contemplated for existing commercially zoned properties, and increased development capacity is contemplated for existing multi-family properties. The City is not considering converting residential to commercial land uses.

Steven Appleton (March 24, 2023)
Public Comments on the City of South Pasadena 5th Draft Housing Element, Clean Version.
Submitted on March 23, 2023.
Submitted on March 24, 2023 at 11:55 am

COMMENT 1:

In several locations in the 5th Draft Housing Element of the City of South Pasadena the subject of Rental Housing inspections is addressed, including direct mention of Assembly Bill 838. References can be found on pages 7, 67,68,255 and B1-47. The following statement summarizes the City's stated intent:

"To augment the City's already established code enforcement work, Community Development staff will develop and propose for City Council's approval a Rental Housing Inspection Program, which would entail systematic, proactive, and routine inspections of certain rental properties to ensure compliance with health and safety codes. This program will support the City's inspection of rental properties in response to a tenant's complaint of substandard conditions as required under AB 838 by not only providing the infrastructure and capacity for code enforcement but also preventing tenant habitability issues before they emerge. "page 7.

I am a tenant who complained about substandard conditions and requested Code Enforcement inspection of the unit my family rented in South Pasadena, but City refused to inspect even after July 1. 2022 when it was obligated to inspect per the provisions of AB 838. The City continues to state a policy of "no inspection" of rental housing. As such, I question the 8-year timetable for implementing a full inspection program stated on page 7. If the Housing Element is approved with such a liberal timeline for compliance with AB838, it would enable the continuation of practices that play a role in the displacement of tenants.

I offer the below as rational for my comment:

On three occasions after July 1, 2022, I requested Code Enforcement of the City of South Pasadena to inspect the premises because of improper egress (substandard stairs to unpermitted sleeping quarters), fire code violations, and lack of heating etc. In each case I was told that "City of South Pasadena does not have an occupancy inspection program and will not inspect the property." I was referred to a nonprofit tenant's rights group.

City of South Pasadena's refusal to inspect our rental premises is an unfulfilled obligation. The failure to inspect as required by law impacted our move-out. Future tenants are also impacted. Objective code and habitability inspection would reveal unsafe conditions, including structural deficiencies caused by unpermitted construction that continue to pose risk to any future tenants. Therefore, I have continued to request an inspection of the premises based on the fact that the failure to inspect when requested is an unfilled obligation of the City. The response of City staff was to quote the "no rental housing inspection policy of the City," as noted below:

Angelica Frausto-Lupo , Community Development Director, City of South Pasadena, January 17, 2023: "I had my building team look into the matter and there is insufficient reason for further investigation or to open a code enforcement case. Further, the City of South Pasadena currently does not have an occupancy inspection program and as such we will not pursue inspection of these properties."

Paul Riddle, Fire Chief, City of South Pasadena, March 13, 2023:

"I discussed with our Building Department had they advised that this matter has insufficient reason for further investigation or to open a code enforcement case. They also cited the fact, the City of South Pasadena does not have an occupancy inspection program and as such they will not pursue inspection of these properties. Tenants can reach out to a landlord/tenant rights organization such as the Housing Rights Center, https://www.housingrightscenter.org/ or the LA County Department of Public Health to file a complaint.

I suggest that the Housing Element is deficient unless the City of South Pasadena revises it to state that the City of South Pasadena will:

1) Immediately accept and process rental housing inspection requests made by tenants or tenant agents in line with the provisions of AB 838.
2) Immediately instruct all staff to change messaging to reflect that tenants have a right to request an inspection and be informed of the results of inspections.
3) Retroactively inspect any housing where a complaint was made by a tenant after July 1,2022 but City refused to inspect. (If a request was made after July 1, 2022, the City's refusal to inspect is an unfulfilled obligation. The unfulfilled obligation has continuing impacts on past and future tenants.)

COMMENT 2:

I guide you to page Page B1-135 under "How Addressed". In reference to Table VI-26, the document states, "It should be noted that these units are all single-family properties, and do not include multi-unit rental properties."

The Housing Element should clarify that the City will accept and process rental housing inspection requests of tenants of multi-family housing.

Steven Appleton

- **How addressed:** The City acknowledges that at the time of the events Mr. Appleton refers to, the City was unprepared to fulfill its responsibilities under AB 838. The City is currently aware of its responsibilities under AB 838 and we are attempting to comply with the law. Should a tenant contact the City to request an inspection, we will respond in compliance with AB 838. This obligation is being formalized into a program under the Housing Element by including a proposed occupancy inspection program which would entail systemic, proactive, and routine inspections of certain rental properties to ensure compliance with health and safety codes as noted in the Housing Element Program 1.c-"Housing Rehabilitation and Code Enforcement." As stated in Program 1.c., the proposed occupancy inspection program "will support the City's inspection of rental properties in response to tenant's complaints of substandard conditions as required under AB 838 by not only providing the infrastructure and capacity for code enforcement, but also preventing tenant habitability issues before they emerge."

Anonymous (March 24, 2023)

As a resident, small developer and commercial property owner on Huntington Drive, I think the city's future development needs require a more aggressive plan for the Huntington Corridor. Right now the Housing Element's main focus is developing the DTSP and expanding the DTSP development standards to other areas including the proposed mixed-use zones.(See Program 3.A and 3.B., Housing Element, 5th draft). But that seems flawed as the DTSP development standards are based on the limits of the downtown area. These include historical resources, the area's existing density, traffic congestion, the small two lane roads that make up Mission St.and Monterey St. and the many more smaller one lane roads that intersect them. However, none of these qualities exist in the same proportion on the Huntington Drive Corridor. Huntington Drive is about 110ft wide. It is a large 3 lane road with NO significant historical resource or comparable density and traffic. Consequently, Huntington Drive can support development standards that are DOUBLE that of the DTSP. With sufficient height and density allowance the majority of the City's RHNA obligations can be satisfied from this area alone. This would create less of a burden to develop the more historically sensitive neighborhoods that make up the DNA of the City's heritage and charms. However, as the area consists largely of income generating commercial and multi family properties, the DTSP development

standards as proposed (namely a 70/110 DU/AC and 2.5 F.A.R. is insufficient to motivate us to risk losing guaranteed existing income.

Consequently, creating a different development standard that provides for even more density and massing than the DTSP is warranted and should be supported. Additionally, developing the Huntington Corridor into a highly dense lively mixed use zone will create desperately needed housing and provide for the City's future growth whilst protecting the City's historic family neighborhood charm.

-Anonymous Resident, Owner and Small Developer

- **How addressed:** The Housing Element accommodates the City's RHNA requirements throughout the city, including within the downtown area and along Huntington Drive.

Josh Albrektson (May 4, 2023)

At the Feb first city council meeting, Mr. Anderson, the lawyer for the pavilions property, clearly stated that he needed 140 to 160 DU/acre in order for the project to be feasible.

In response, the City of South Pasadena set the density to 110 DU/Acre, 35% lower than what Mr. Anderson said was required for feasible. Alison Backer in her meeting with me told me that it was intentionally and they considered removing the site as a possible housing site.

South Pasadena is intentionally trying to make sure the pavilions cannot be redeveloped and they should be forced to rezone the Fair Oaks corridor to 140 DU/Acre.

If they do not do this, then there should be a hard deadline that if they do not have a project proposed on Fair Oaks, say by May 1st, 2026 then it would automatically go to 140 DU/Acre.

--
Josh Albrektson MD
Neuroradiologist by night
Crime fighter by day

- **How addressed:** As the City discussed with HCD during its April 24th meeting, Site 15 will be rezoned to allow for 110 du/ac, along with the entire Fair Oaks Avenue corridor. As HCD's research shows, this density is sufficient to ensure the site is viable for redevelopment to residential uses. Furthermore, the comments made by the property owner's representative during the February 1st City Council meeting mentioned a variety of viable densities. While they did state that 140 du/ac would be needed, that was with a higher inclusionary requirement than the city currently has, while the City has committed to reducing its inclusionary requirement, and to review and update the reduced requirement throughout the planning period to ensure that it does not create a constraint on development.

Re: 2021-2029 Housing Element Update

Dear Property Owner,

The City of South Pasadena (City) is in the process of updating its Housing Element of the General Plan as required by state law. The new Housing Element is intended to address the housing needs of current and future City residents. One of the requirements of the Housing Element is for the City to demonstrate that there is sufficient land to allow the development of a range housing types to include higher density multi-family units.

The City has identified the property at [PROPERTY ADDRESS], which our records indicate you own, as having the potential to be developed with higher density multi-family units. A development with up to 30 units per acre is already allowed in this location either under current zoning or would allowed by the draft General Plan and Downtown Specific Plan, currently undergoing community input and anticipated for adoption in mid-2021. One of the options the community will consider through ongoing outreach is whether to allow increasing the height or density on specific sites or in certain areas of the City to accommodate more affordable housing.

The City would like your input regarding the future of your property.

- ☐ **Are you interested in new residential development at [PROPERTY ADDRESS] within the next 3-8 years?**
  - o **If yes:**
    - ▪ **Have you already begun to explore this possibility?**
    - ▪ **Have you considered a particular type of project?**
    - ▪ **Have you considered developing the property with affordable units?**
    - ▪ **Would an increase in height or density change your perspective?**
- ☐ **Do you have any concerns about your property being identified for potential housing development in the Housing Element?**

We look forward to your input to ensure we develop the most accurate and feasible plan for our housing future. Please send us an email at HousingElement@SouthPasadenaCA.gov to provide us with your feedback by November 3, 2020, so that we can complete our Housing Element update effort. If you have any questions or comments please feel free to contact Margaret Lin, Manager of Long Range Planning and Economic Development at MLin@SouthPasadenaCA.gov or (626) 403-7236.

Sincerely,

Joanna Hankamer
Director of Planning and Community Development

Appendix E: Accessory Dwelling Unit Projection Methodology

Analysis for projecting accessory dwelling units as part of meeting South Pasadena's Regional Housing Needs Allocation (*Revised: September 2022*)

As part of the Housing Element Update for the City of South Pasadena (City) and to ensure that the City is able to meet the Regional Housing Needs Assessment (RHNA) assigned by the Southern California Association of Governments (SCAG), the City may project the number of Accessory Dwelling Units (ADUs) that is expected to be built over the course of the 6th Round Housing Element Cycle. The California Department of Housing and Community Development (HCD) recognizes that ADUs have become more popular in recent years and expects the trend to continue. ADUs are seen as an attractive option for developing housing given their affordability to lower-income renters, relatively low cost to construct, and their ability to provide income and alternative housing options to homeowners.

Assuming a certain number of ADUs will be developed over the course of housing element implementation has been acceptable to the State of California since ADU law was instituted in 2003. These projections are based on recent past ADU development trends in the jurisdiction and the current market rents for ADUs in the jurisdiction. State law regulating ADUs has changed significantly since 2016, requiring local jurisdictions to allow ADUs more broadly across a jurisdiction and with development standards and other regulations that reduce cost and other barriers to ADU development. This includes changes to require less on-site parking, allow fewer fees to be charged related to ADUs, and allow conversion of existing structures to ADUs.

HCD "Safe Harbor" Calculation

HCD's Housing Element Site Inventory Guidebook, finalized in June 2020, has clarified parameters for analyzing ADU past performance and using it to project the number of ADUs expected to be developed as part of meeting the City's RHNA. HCD has explained that the quantity of ADU building permits issued in previous years, particularly since 2018 as effects of the changes to the law began having more impact, may be used as a baseline for making the calculations. According to HCD, to project the number of ADUs expected, there are two methods that are acceptable to arrive at a 'safe harbor' number for projected ADUs. Both are based on past approvals of ADUs in a jurisdiction. Based on preliminary discussions with HCD for South Pasadena, the safe harbor number can be relied on in the 6th Round Housing Element in combination with programs to comply with state ADU regulations and monitor ADU production. The two options for 'safe harbor' analysis are described here:

- Use the number of ADU building permits in the jurisdiction since January 2018 to estimate new production. Take the average number of ADUs that have received building permits per year since the beginning of 2018. That average number can be assumed to be the average number of ADUs that will be permitted per year through the rest of the 6th Cycle RHNA projection period (through October 15, 2029). The 6th Cycle RHNA projection period begins June 30, 2021.
- Assume an average increase of five times the previous planning period ADU construction trends prior to 2018. Take the average number of ADUs with building permits issued per year between January 1, 2014, and December 31, 2017, which is the part of the 5th Housing Element RHNA projection period occurring before January 1, 2018, when many of the new ADU laws began to take effect. Multiply that average by five. That average number can be assumed to be the

average number of ADUs that will be permitted per year through the rest of the 6th Cycle RHNA projection period (through October 15, 2029).

A jurisdiction may choose to use one or the other of these approaches if better data is available for one of the timeframes. Before 2018, South Pasadena had only approved one ADU (during the 5th Cycle). During that time, the ADU regulations in the City were much more limiting and ADUs were only allowed on parcels larger than 12,000 square feet. Once the new state laws took effect, the ADU numbers began to increase. Between January 1, 2018, and the present (mid-2022), an average of 16 ADUs received planning permits per year with an increase every year.

Four ADUs received building permits in 2018, seven in 2019, eight in 2020, 19 in 2021 and 38 during the first two-thirds of 2022 (by August 31), for an average of over 16 ADUs per year receiving building permits during that timeframe.

When 16 ADUs per year on average are projected through the end of the projection period, the City estimates a safe harbor number of 148 ADUs between June 30, 2021, and October 15, 2029.

Projection Based on Data Reflecting South Pasadena's Specific Circumstances

If a jurisdiction expects a higher number of ADU approvals in the 6th Cycle than what is projected using one of the safe harbor options, additional data, analysis of trends, and supporting programs, including a monitoring program, must be included in the Housing Element. The City of South Pasadena does expect a higher number of ADUs will be permitted than the safe harbor number of 148 ADUs, because of the recent upward trajectory following updates to the City's ADU zoning regulations that went into effect in early June and December 2021, and based on the results of other ADU programs and initiatives that have been implemented or are planned at the City.

Over five years, ADU building permit activity has increased as follows:

- 2017 to 2018 – increase from 1 to 4 ADUs that received building permits
- 2018 to 2019 – increase from 4 to 7 ADUs that received building permits
- 2019 to 2020 – increase from 7 to 8 ADUs that received building permits
- 2020 to 2021 – increase from 8 to 19 ADUs that received building permits
- 2021 to June 30, 2022 – increase over 6 months to 29 ADUs (or 58 ADUs projected to an annualized number) that received building permits

The 19 permits issued in 2021 and 29 permits issued in the first half of 2022 far exceeded the City's earlier (Public Review Draft) projection of 12 ADU permits. The increase can be attributed to two important policy actions taken by the City Council:

Adoption in December 2021 of an urgency ordinance with standards for constructing ADUs on historic properties, along with comprehensive design guidelines that pave an administrative (by-right) path for owners of historic properties to build an ADU. Council adopted the same ordinance permanently into the Municipal Code on February 2, 2022. These changes to the code resolved issues that have delayed approval of ADUs and reduced application submittals. Staff immediately noticed an increase in interest and new applications with approval of the new standards. Additionally, the City streamlined the application process with new forms and electronic submittal. Accordingly, more complete applications have been received and approved more quickly.

Additionally, at the end of 2021, the City added four new Planning staff to increase permit processing

capacity, including ADU applications.

With increased staffing and clear, objective Code standards, the City has increased confidence in the projections provided in the first two public drafts. The City has already initiated several of the programs in this 2021-2029 Housing Element, including homeowner education and assistance and the ADU amnesty program for property owners with an existing unpermitted ADU on their property to legalize based on compliance with the Building Code. A list of the programs and initiatives the City is undertaking related to ADUs is included at the end of this memo.

The trend in ADU application submittals since the Code was amended, documented above, supports an assumption that the "safe harbor" is far below reasonably projected numbers, and given the City's RHNA, it is important to use a projection that is reflective of the permit activity experienced since conditions changed starting in June 2021. As the third Public Review Draft is released, data through August 2022 shows a sharp increase in applications and building permits, and the City expects to issue 58 ADU building permits in 2022. To maintain a conservative forecast, this sharp increase will be considered to 8 represent a "bubble" due to pent-up demand, with future years of the planning period remaining as forecast earlier (39 annually) as shown in Table 1. In order to remain consistent with the public's and HCD's understanding of the City's approach for the RHNA forecast and the housing program, the City will continue to use the figure of 297 units for those purposes, as projected in earlier public review drafts.

Table 1. Accessory Dwelling Unit Projection

Year	ADU Planning Permits	ADU Building Permits
2020 - Actual	17	8
2021 - Actual	62	19
Issued from June 30 through December 31 2021 (Actual)	28	9
Issued from January 1 through June 30 2022 (Actual)	50	29
Remainder of 2022	50	29
2023	55	39
2024	55	39
2025	55	39
2026	55	39
2027	55	39
2028	55	39
2029 (through October 15)	40	28
Total January 1, 2022-October 15, 2029	**470**	**320**

It is quite possible that the projection in Table 1 is too low, as market trends show growing popularity for ADU construction. Applications on historic properties in particular are just beginning to be submitted. For informational purposes, a second, more robust, scenario is included in Table 3 that assumes that 2022 was a bubble, but which projects a stronger growth trend throughout the planning period, with 75% of applications moving forward to building permit issuance.

ADU Affordability Analysis

SCAG prepared its Regional ADU Affordability Analysis for the entire SCAG region in 2020. The analysis was accepted by HCD in late 2020 and is the best proxy for estimating affordability levels for

South Pasadena. The analysis made findings for affordability of ADUs by subregion based on data gathered on current rents and occupancy of ADUs in addition to industry research about affordability levels of ADUs, including those that do not reach the rental market. ADU research conducted by the University of California, Berkeley's Center for Community Innovation[i] indicates that 40 percent of ADUs are typically rented to family members or friends at either no cost or below-market rental rates. SCAG conservatively estimated that 15 percent of the ADUs in their region would be in this category and thus rented to the extremely low-income category of households. Table 2 lists the projected 297 ADUs by income category based on the SCAG analysis for the Los Angeles II subregion that includes South Pasadena.

Table 2. Projected ADUs - Affordability

Percentage	Number of ADUs	Income Category Affordable To:
15%	45	Extremely Low Income
9%	27	Very Low Income
44%	131	Low Income
2%	6	Moderate Income
30%	89	Above Moderate Income
100%	**297**	**Total**

An Alternative Projection Based on the 2021-2022 ADU Permit Trend

As noted above, Table 3 presents a scenario that reflects the actual number of approved ADU Planning applications and building permits issued in 2021, accounts for 2022 ADU permits as a bubble, and assumes an increase in applications from 2021 to 2023 that continues for three years before leveling off. This scenario also assumes that 75 percent of approved Planning applications will receive building permits. Based on these assumptions, this more robust scenario projects a total of 403 ADUs between January 1, 2022, and October 15, 2029.

Table 3. Possible Higher Accessory Dwelling Unit Projection

Year	ADU Planning Applications	ADU Building Permits Issued	Notes
2020	30	8	Actual
2021	45	21	Actual 150% increase in Planning applications; 400% increase in building permits.
Issued after June 30, 2021	28	9	Actual
2022	100	58	Assumption of same level of applications for the remainder of 2022 (same as Table 1)
2023	55	41	Assumption of 2022 as a bubble, but increase in applications over 2021 and 75% moving forward to building permits
2024	60	45	Assumption of 10% increase in applications and 75% moving forward to building permits
2025	66	50	
2026	72	54	
2027	72	54	Assumption of steady application rate, no increase
2028	72	54	
2029 (through October 15)	63	47	Same assumption as previous year, through October 15, 2029
Total January 1, 2022-October 15, 2029	**560**	**403**	

Projections Relative to Existing Single-family Housing Stock

In 2019, South Pasadena's single-family housing stock consisted of 5,642 units. 30 ADU permits were issued in the previous housing element cycle, including the first half of 2021.

The projection of 297 units, which is used for RHNA and program purposes in this housing element and Table 3 both project many more ADUs, and for context, it is informative to consider the number of single-family properties within the city and whether those projections make sense within that context. Table 4 includes the 30 5th cycle ADUs, the 9 units permitted in the 2nd half of 2021, together with the actual and projected 2022-2029 ADUs for both projection scenarios and calculates them as a percentage of the 2019 housing stock. As shown, the more conservative projection would result in about 6 percent of single-family properties that have ADUs in 2029. The more aggressive scenario results in 7.8 percent. In either case, more than 92 percent of single-family properties remain unchanged.

Table 4: Percentage of ADUs Projected Relative to Housing Stock			
Housing Stock (5,642 units)	5,642	Additional ADUs as a % of housing stock	Total ADUs as a % of housing stock
297ADUs (+30+9)	336	5.4%	6.6%
Table 3 ADUs (+30+9)	442	7.3%	7.8%

Additionally, the estimate of ADUs as a percentage of single-family properties does not take into account that some ADUs will be constructed on multifamily properties. It is anticipated that these will become more popular as apartment building owners get savvier regarding ADU law. As of 2022, the City has already approved the first such applications. Furthermore, the City's program creating an amnesty process for illegal units, to recognize them as ADUs, will bring additional units into the housing stock, and are not contemplated in this scenario. Based on this information, it can be concluded that both of the ADU projection scenarios are realistic within the context of the overall existing housing stock in South Pasadena.

City of South Pasadena ADU Initiatives and Programs for 2021-2029

Program 3.f – Allow and Facilitate ADUs

Assumption of same level of applications and 75% moving forward to building permits

Program 3.i – ADU Amnesty Program

Program 3.j – Adjust ADU Permit, Utility Connection, and Impact Fees

Program 3.k – ADU Education and Promotion and Homeowner Outreach

Appendix F:
Realistic Capacity Analysis

Justification of the 95 percent Realistic Capacity Assumption Applied to Downtown and Mixed-Use Sites

Much of the City of South Pasadena's lower-income Regional Housing Needs Assessment (RHNA) is proposed to be accommodated in the Draft Downtown Specific Plan (DTSP) area and the mixed-use Neighborhood Centers proposed in the General Plan Update. These sites are included in the set of sites with detailed exhibits and descriptions in Appendix A. Where full redevelopment of a site or adding to existing structures is assumed for the Housing Element analysis, a realistic development capacity of 95 percent is assumed. The realistic capacity assumption of 95 percent is supported by past and current trends showing redevelopment at 97 percent or more of the base capacity and by new policies requiring inclusionary housing and providing design incentives, FAR bonuses, height concessions and other options to increase density (state density bonus) for projects on these sites. This appendix is included to provide the background and analysis to support that 95-percent assumption.

Multi-unit Housing: Trending Upward in South Pasadena and Regionally

The City of South Pasadena is nearly built out and has very little vacant land of a size suitable for multifamily development. However, the market in South Pasadena and the region has addressed this situation with infill and mixed-use redevelopment of sites that include a portion or all of the site with new residential units.

After a hiatus following construction of South Pasadena's first new mixed-use, transit-adjacent development in 2005, several multiple-unit residential or mixed-use projects containing higher density housing have recently been constructed or approved in South Pasadena (see Table 1), demonstrating an increasing interest to construct multi-family housing in the city. These are all on sites that were previously developed. The Mission Bell Project, approved in 2020, includes adaptive reuse of existing historic structures. The Senior Housing Project, with 13 affordable units, was approved in 2020 under the City's first state density bonus application. The Seven Patios Project, with 60 housing units, was approved in 2021. All three projects were able to achieve higher densities with a range from 22 to 50 dwelling units per acre (du/ac) without accounting for removal of the nonresidential portions of the project from the total parcel or site in the case of the mixed-use projects. All three projects achieved higher than 95 percent of allowed development capacity and two achieved higher than 100 percent. While the trend toward higher density, mixed-use development in South Pasadena is more recent, it is consistent with what is happening in the region, where projects containing multi-family housing of various densities, unit sizes, and architectural styles are being developed at 100 percent or higher percent of allowed capacity on previously developed sites (See Housing Element Tables VI-44 and 42). Most are receiving the entitlements with the inclusion of dedicated affordable units as a prerequisite to receiving significant density bonuses that are attractive to developers and make the project feasible.

Table 1. Representative Projects on Non-Vacant Sites in South Pasadena

Address/ Project Name	Assessor's Parcel Numbers	Acres	Entitled, Under Construction, or Completed?	Zone	Previously Developed With/ Existing Uses	Project Description	Total Number of Dwelling Units	Density	Percentage of Allowed Capacity	Similar Sites in Table VI-46 (and Site ID)

Overall density of 40 units/acre.	67	42	97% of allowed FAR (Allowed FAR was 1.5, project approved at 1.45)	Meridian site (Site 11)

Source: PlaceWorks and City of South Pasadena, 2021

Why this trend will continue and likely increase: Inclusionary Housing and Density Bonus

Chapter 6.5 (Housing Development Resources) provides a full narrative of the inclusionary housing ordinance (see *Zoning Provisions to Encourage Affordable Housing*), which Council adopted in May 2021. The projects in Table 1 were developed prior to the City's adoption of this ordinance. Only one of them voluntarily included affordable units and received bonus density and height, achieving 138% of the underlying density (allowed capacity), the highest of the five projects. Now that the inclusionary units are required, coupled with by-right density bonus, this has become a central component of the strategy to build affordable units and forms an important component of the basis for anticipating the 95-percent realistic capacity.

Because the properties identified in the Sites Inventory (Appendix A) with a 95-percent realistic capacity assumption are eligible for the design incentives in the adopted Inclusionary Housing Ordinance and because the Inclusionary Housing regulations apply to all residential projects of more than three units, the realistic capacity on these sites takes the Inclusionary Housing regulations into consideration.

The inclusionary housing regulations streamline use of the State Density Bonus to increase the amount of affordable housing approved in the City. This recent change will work together with proposed changes in the General Plan and Downtown Specific Plan, both currently being updated, to allow higher-density housing in more areas of the city through mixed-use zoning and an affordable housing overlay. These changes will be adopted at or near the same time as Housing Element adoption. Zoning updates to codify those changes will occur shortly after the General Plan and Downtown Specific Plan are adopted. The City has been conducting outreach and gathering input from the community and decision makers since early 2019 and support has been expressed for the proposed increased density.

State and Local Regulations encourage full development of allowed capacity for project feasibility

In the process of developing the inclusionary housing ordinance, the City reviewed analysis of jurisdictions throughout the state, including several with similar housing markets within the San Gabriel Valley and wider Los Angeles County region in order to choose a level that would result in the most affordable units while maintaining project feasibility. The recently increased State density bonus, which offers density bonuses up to 35% or 50% for providing very-low or lower income units, combined with the streamlined incentives, supports economic feasibility for projects with 20% affordable units as required by the ordinance. The City has not been made aware of any pending applications that were cancelled due to adoption of the inclusionary housing regulations. In fact, the effect thus far has been as anticipated; the City has received more inquiries from developers since adopting the inclusionary housing regulations.

In September 2021, the City received the first Design Review application subject to the inclusionary housing code, for 108 one- and two-bedroom condominium units in a mixed-use, 84,198 square-foot, 50-foot height project. The proposed project would include 20% of its base units as affordable. The applicant is requesting to comply with the streamlined density bonus provisions and receive Code-allowed concessions. However, staff understands that many developers need to wait for density increases in the forthcoming General Plan and Downtown Specific Plan before submitting applications.

Ongoing Analysis and Monitoring

In July 2021, the City contracted with EPS, an economics consultant firm, to prepare an Inclusionary Housing In-Lieu Fee Study and develop Affordable Housing Program Recommendations. This work will analyze the inclusionary housing regulations and make recommendations for the City's affordable

housing program or participation in a regional affordable housing production program. The analysis will also support the City's understanding of housing production trends and confirm the assumptions that it is realistic to anticipate that developments will be proposed at 95 percent of the zoning capacity. The City has committed in the programs section of this Housing Element to reviewing the effectiveness of the inclusionary regulations starting in 2022 and revising if needed at that point.

Conclusion

Based on the trends and regulations analyzed, the assumption of 95 percent of realistic development capacity on the DTSP and mixed-use sites is reasonable and potentially conservative based on the fact that the most recently approved and developed multifamily and mixed-use with multifamily projects are developing at a higher percentage of allowed capacity. Table 2 shows the number of units on these sites at 95, 100, and 110 percent of allowed capacity under the proposed DTSP and General Plan. Note that the figures include the small number of sites that have a lower-capacity assumption in the DTSP and mixed-use areas. The realistic capacity percentages are lower on those sites because of existing uses that are anticipated to remain on part of the sites.

While 95 percent is the assumption used for this housing element, the number of units potentially possible at 100 and 110 percent of capacity are included in Table 2 to demonstrate what could easily happen if the recent trends to take advantage of state density bonus law for multifamily projects in South Pasadena continue.

City Council Agenda Report

ITEM NO. 4

DATE: May 30, 2023

FROM: Arminé Chaparyan, City Manager AC

PREPARED BY: John Downs, Interim Finance Director
Hsiulee Tran, Deputy Finance Director

SUBJECT: **Review of the Draft Proposed Fiscal Year 2023-2024 Budget**

Recommendation
It is recommended that the City Council review the Draft Proposed Fiscal Year 2023-2024 Budget.

Background
The Finance Commission received a first draft of this document on May 16, 2023, staff implemented the recommended changes, as well as any remaining clean up measures in finessing the document. The Finance Commission will review a revised draft on June 1, 2023 for their consideration to recommend for approval, and the City Council will receive the final proposed budget for consideration and adoption on June 7, 2023.

The Finance Department has made considerable efforts in engaging the community in the budget process. An online survey, community outreach about engagement opportunities have been publicized, and two in-person and virtual budget input sessions were held on May 18, 2023. These are in addition to the draft budget discussions with each member of Council with Department Directors, two budget workshops for staff, as well as the opportunity to engage on this document at the Finance Commission meeting.

Discussion/Analysis
Enclosed is the updated draft Proposed Fiscal Year 2023-2024 Budget. The focus of this report will be the integrity of the document for final review from the Finance Commission and a subsequent review and approval from the City Council.

Fiscal Impact
This document is meant to ensure the city's finances for the upcoming fiscal year.

About South Pasadena

The City of South Pasadena is located approximately six miles northeast of downtown Los Angeles, between the cities of Pasadena, San Marino, Los Angeles and Alhambra. It has a population of 26,314. Founded in 1874 by the Indiana Colony, the City was incorporated as a General Law city of the State of California on March 2, 1888. South Pasadena is known for its tree-lined streets, historic California Craftsman-style homes, unique small businesses and its outstanding public schools. This small-town atmosphere makes South Pasadena one of California's most desirable locations. South Pasadena has quality education, a strong religious community, an extensive network of parks and a rich architectural heritage. Dynamic civic organizations, a population of ethnic and cultural diversity, and a vital seniors' group further enrich our small-town quality of life. Small, proud and independent, the City of South Pasadena has battled for a hundred years to preserve its status as a distinct—and distinctive—community. South Pasadena possesses a full-service City government that provides high-quality services in general administration, police, fire, library, public works, community development, and redevelopment projects.

City History

In early 1874, the area that is now South Pasadena was a part of the San Gabriel-Orange Grove Association. In 1875, the stockholders of the association voted to name their town Pasadena and just three years later, residents living in the southern portion of Pasadena considered themselves South Pasadenans.

In February of 1888, in order to control their own territory, South Pasadenans voted eighty-five to twenty-five for incorporation. A board of trustees was elected and Ammon B. Cobb was appointed as the first marshal, with Marshal B. Selmen as his deputy.

On March 2, 1888, South Pasadena officially incorporated with a population of slightly over 500.

The City's boundaries established in 1889 are essentially the same today. South Pasadena consists of 3.44 square miles of prime residential property. In 1876, unimproved land with water was selling from $75 to $150 an acre. Today a vacant lot in South Pasadena can be sold for more than $200,000.

Few cities in California are better recognized for the quality of its small-town atmosphere and rich legacy of intact late 19th and early 20th century neighborhoods and residences. South Pasadena also has a strong claim to having the oldest and most historic sites in the San Gabriel Valley. For many centuries, its adjacency to a natural fording place along the Arroyo Seco had served as a gateway to travel and commerce for aboriginal peoples here and along the coast. It was here that Hahamognas greeted Portola and the missionaries who later established the San Gabriel Mission a few miles to the west.

The initial buildings on the Rancho San Pascual, which subsequently gave birth to the Cities of Pasadena, South Pasadena and Altadena, were built here. The first of these adobe structures became headquarters for General Flores and his staff in 1847 where they agreed to surrender to American forces, ending Mexican Colonial rule in California.

In 1888, South Pasadena incorporated the southern portion of the Indiana Colony and land south and eastward to the Los Angeles border, becoming the sixth municipality in Los Angeles County. With the establishment of the Raymond Hotel and the Cawston Ostrich Farm, the small community was able to attract tourists and increasingly large waves of new residents to the Pasadena area in the late 19th and early 20th Centuries. With completion of the Pacific Electric Short Line, putting the entire city within easy walking distance of the "red car" stations, South Pasadena also became one of the first suburbs of Los Angeles. It is now certainly one of the best-preserved cities, maintaining a small-town quality and humanity in the scale of its buildings, its residential streetscapes and historic commercial core.

City Manager's Budget Message

Fiscal Year 2023-24

June 7, 2023

Honorable Mayor and City Council,

It is my pleasure to present to you the Fiscal Year (FY) 2023-2024 Annual Budget, which we embarked on under the theme of continued Transparency and Collaboration. As we close out this year, we reflect on the progress and improvements made during Fiscal Year 2022-23 across all our City departments, in professionalizing the agency and delivering it to new standards, and in the level of service we provide our community.

This year, we continued our efforts in completing organizational assessments, including the Finance and Community Services departments, and embarking on the Police assessment. These assessments provide the agency an opportunity to review staffing and resources, work flows and outputs, research and incorporate industry best practices, review and improve upon policy, and deliver each department, and the agency, to the next level. The Library has also completed a Strategic Plan and held a Joint study session with the City Council and Library Board of Trustees to discuss the future of the site. On the topic of site assessments, we have completed a facility assessment of the Library site, and will be beginning the City Hall site assessment shortly.

Hand in hand with the assessments, the City has remained committed to hiring the best and the brightest in our industry, and have facilitated over 50 recruitments and hirings in the last year, and also experienced the transitioning of a number of staff during this unprecedented recruiting season. New hires including the hiring of a new Deputy Finance Director/Controller for operational oversight, and a Senior Management Analyst in creating the City's Housing Division, in late 2022. This budget resources our departments to transition from temporary to permanent staffing, and allows us to focus the year ahead. **GWD:** Get Work Done.

The City continues implementing the 2021-2026 Strategic Plan, which highlights and resources the priorities of the City Council and community. With the City's Strategic Plan over 50% completed, and the onboarding of a new Councilwoman and City Treasurer in early 2023, staff will facilitate a Strategic Plan revisit, including community engagement and input, in Fall 2023, to revisit our priorities and ensure we are on track to meet the needs of the community.

We have engaged with our community more than before, and continue that commitment. Our launch of the City's mobile app, SouthPas Mobile, provided resources, information and customer requests at community member fingertips, and also provided another engagement tool with our constituents. We have released a Request for Proposal for a new City website, anticipated to launch end of year, which will be a user-friendly, welcoming resource to community members, visitors and staff. Community engagements and surveys gleaned information on communications preferences, input on the proposed budget, the housing element, and more. In working with the City Council, we have better utilized the tremendous brain power and servitude of our City commissions in providing actionable recommendations for consideration in policymaking, as well as come together on a number of study sessions focused on streets, housing, and the future of the library site, for brainstorming and priority setting efforts.

This year saw the return of our City's events and programming, including the Commissioner Congress as well as a City Hall Open House event to introduce the new staff to the community

DRAFT

and welcome everyone back post-COVID. In this budget we have included a wish list of items we have heard back on from the City Council and the community, with the first phase costs listed below:

- Vision 2050- $100,000
- Library Master Plan- $150,000
- Multi-Cultural City Celebration- $50,000

As we close out our pandemic years, we look to the future and to transitioning to the new normal, which includes a further commitment to resident and business support, resources and service. Our Economic Development Team continues building upon their programming and service to the City, working to put our business community on the map, in championing and strengthening the local economy, and in welcoming new investment to the community. Another significant transition includes the award of a new contract for City Attorney Services. The City Council directed staff to work with a Council sub-committee in developing and released a Request for Proposal for City Attorney Services, and staff from the City Manager's Office worked diligently on the process—City Council will consider the award of contract in June 2023.

We have established a Housing Division in the Community Development Department, and they have hit the ground running on key priorities and programs, including the Housing Element and various programs, the Caltrans surplus properties and the policy decisions that City Council will soon begin to make on the opportunity to exercise first right of refusal on those properties, research on the no-fault eviction moratorium as it related to our 52% of renter residents. The budget proposes almost $1M in Housing Element implementation and programmatic efforts, including:

- Tenant protection- $400,000
- Racially Restrictive Covenants- $100,000
- Cultural Heritage Ordinance Update- $200,000
- Inclusionary Housing Ordinance (IHO) In-Lieu Fee Study- $23,000
- Ballot Measure on Height Limit Study- $100,000
- General Plan/ Downtown Specific Plan consultant (Rangwalla)- $150,000

We have also furthered our commitment to the social services, veterans, elder adults and various partner agencies. While not a direct service provider, the City recognizes that a number of service providers touch and serve our community, and we have identified the opportunity to establish a Social Services Task Force, which leverages resources available to our community, identify gaps in service to pursue further partnerships. The team has launched a Social Services Resource Guide and a Elder Adults Resource Guide, and will continue looking for opportunities here.

The year ahead holds many priorities and goals: implement the City Hall Electrification Project, which includes infrastructure investments at City Hall and the transition of the Police fleet vehicles to electric, street repaving and infrastructure improvements, the programmatic efforts in our Housing Element and transitioning to compliance and implementation including the finalizing of the General Plan and Downtown Specific Plan, the implementation of the Slow Streets Program. Staff will actively look for opportunities to solicit grant funding for City programming. We look forward to the progress we will make with our City Council, Commissions and Boards, community members and staff.

Finances

Specifically, on the City's financials, we have made great strides. The City has adopted citywide policies and protocols, delivered a timely Mid-Year Budget Report to Council, has made notable improvements on the City audit, and is delivering a timely budget and 5-year Capital Improvement Program (CIP). We delivered on our commitment for transparency and information sharing, having delivered quarterly budget updates that have now shifted to monthly updates, delivering monthly operational status updates during a height of transition, and intentionally sharing pertinent information with the Finance Commission along with the City Council. We continue the commitment to share information and bring the community along with our efforts as good stewards of our finances.

The agency is financially healthy, and great efforts are being made to implement best practices, policies and protocols to best serve our agency and community. The City received $6.1 million in State and Local Fiscal Recovery Funds for the fiscal year 2022-2023. City Council prioritized partial use of the funds toward significant resource replacements and citywide technological advances to support improved service and oversight, as well as improving the user experience.

For the FY 2023-2024 Budget, the Finance Department embarked on establishing a zero-base budget, and worked with all City Departments in utilizing this process to provide a collaborative product that provides a clean start to the budget document in justifying all appropriations. The FY 2023-2024 proposed Budget includes a minimal increase in expenditures verses the revenue received, and also addresses two large issues that staff became aware of in March 2023: an outstanding invoice of $1.6M due to CJPIA, and about a $1M structural issue in Workers Compensation Insurance Fund. These items have been accounted for and addressed in this budget, and staff will prioritize a review and improvements of the City's insurance procedures, carriers and process in the year ahead.

Financial Policies and Procedures

On September 7, 2022, the City Council adopted the 2022 Finance Policies and Procedures in order to, among other things, establish rules and regulations to establish efficient procedures for the purchase of supplies, services and equipment at the lowest possible cost commensurate with quality needed, to exercise positive financial control over purchases, to clearly define authority for the purchases function, and to assure the quality of purchases. On December 7, 2022, City Council adopted the Second Reading and Adoption of an ordinance of the City of South Pasadena, California, Amending Section 2.99-29 of Article XI Relating to "Purchasing Procedures", and Sections 2.99-35 and 2.99-37 of Article XIII "Awarding Public Works Contracts" of Chapter 2 of the South Pasadena Municipal Code.

On March 15, 2023, the Finance Department presented the Fiscal Year 2022-23 City Council Budget Policies at the Joint meeting of the City Council with Finance Commission, for review and direction. After deliberation, the City Council voted on the document with some edits to be made in working with the Finance Commission, and that document was approved at the May 16, 2023 Finance Commission and May 17, 2023 City Council meetings, respectively. The Finance Department will continue working with the Finance Commission on establishing a bi-annual review of the City Council's adherence to these policies, at the mid-year mark and at the end of each fiscal year. Together, these documents and efforts will continue to contribute to our commitment of good financial stewardship of our agency and community, coupled with working on a five-year projection of forecasting into the new fiscal year.

DRAFT

Budget Input

The FY 2023-24 Budget document includes the detailed Proposed Fiscal Year 2023-24 Budget document, Capital Improvement Plan and Miscellaneous Fee Schedule. Staff conducted Community input opportunities by hosting an online survey for Budget input, which gleaned 165 comments. The two major items determined from the online survey were continued Public Safety support, and improvements to infrastructure. The City also hosted two in person and virtual Community Budget Forums on May 18, 2023, and a review of the final proposed document to Finance Commission on June 1, 2023.

The budget process has focused on a zero-based budget that included a major clean up of the budget document as well as the Capital Improvement Program (CIP) five-year document. The process was collaborative across all City departments, and resources requested are to provide for workload catch up as well as adding capacity to meet the needs of the years ahead.

Thanks to the City Council, our Finance Commission, and all City Departments and staff for their diligence, hard work and efforts in producing this guiding document. I appreciate the continued support of the South Pasadena residents of the City and our efforts in serving our community. We look forward to a positive and fruitful 2023-24 fiscal year.

Respectfully submitted,

Arminé Chaparyan
City Manager

DRAFT

General Fund Operating Revenue History

The chart below summarizes the General Fund Operating revenues from FY 2019/20 to the Adopted FY 2022/23. The Budgeted FY 2022-2023 Revenues were estimated to be $42,849,230, and the estimate for June 30, 2023 is $36,588,626. The difference in estimated revenues for FY 2022-2023 is due to recording the State and Local Fiscal Recover Funds (SLRF) of $6,059,235 from the General Fund into it's own fund, but the City is anticipating an increase to $39,523,631 for FY 2023-2024 due to increases of $1,162,715 in Property Taxes, $166,712 in Sales Taxes, $289,359 in Utility Users Taxes, $54,477 in Franchise Fees, $450,906 in Uses of Money and Property, $239,866 in Fire Interagency Support, $517,257 in Current Services and $53,838 of other revenues.

Revenue Category	Actual 2019/20	Actual 2020/21	Actual 2021/22	Budgeted 2022/23	Estimated 2022/23	Proposed 2023/24

General Fund FY 2022-2023 Projected Summary

The General Fund Balance starting July 1, 2022 was $18,931,422. Revenues are $36,588,626 and expenditures are expected to total $35,681,208. Transfers out of $2,210,847 and reserve adjustments of $1,834,998 leave a projected end balance for June 30, 2023 of $19,462,991. The increase of expenditures and transfers out is due to unanticipated vendor payments for prior years services, additional positions, higher utility costs and incurring an unanticipated CJPIA invoice related prior years general liability and worker's compensation claims of $1,654,761.

General Fund	
Beginning Balance 07/01/22	$18,931,422
Revenues	36,588,626
Expenditures	(35,681,208)
Transfers Out	(2,210,847)
Reserves Adjustment	1,834,998
Projected End Balance 6/30/23	$19,462,991

Fund Balances reflect spendable (unassigned) balances and excludes reserves.

General Fund FY 2022-2023 Projected Reserves

The projected General Fund Reserves end balance for June 30, 2023 totals $4,464,943, with deletions totaling $1,834.998 from the Storm Water Reserve, Library Park Drainage Reserve, Slater Reimbursement Reserve, SR-110 Interchange Project (Rogan Fund Match), and the Stables CIP Reserve.

	Beginning Balance FY 22-23	Additions	Deletions	Ending Balance FY 22-23

DRAFT

General Fund FY 2023-2024 Projected Reserves

The projected General Fund Reserves end balance for June 30, 2024 totals $3,964,943, with deletions totaling $500,000 from the Storm Water Reserve as well as the re-programming of the Mental Health Reserve toward staffing costs, in consideration of the significant funding that has been allocated by Senator Portantino and Congresswoman Chu toward the San Gabriel Valley Care (SGV CARE), previously known as the Mental Health Mobile Co-Response Team.

	Beginning Balance FY 23-24	Additions	Deletions	Ending Balance FY 23-24
Arroyo Golf Course / Bike Trail	600,000			600,000
CalTrans Vacant Lot Purchases	392,000			392,000
Legal Reserve	500,000			500,000
Library Expansion	200,000			200,000
Maint. Yard / Comm. Ctr	267,067			267,067
Renewable Energy Sources Reserve	700,000			700,000
Storm Water	300,000		300,000	-
Financial Sustainability Reserve	900,000			900,000
Slater Reimbursement Reserve	305,876			305,876
Vehicle Replacement Reserve	100,000			100,000
Mental Health Reserve	200,000		200,000	-
	4,464,943	**-**	**500,000**	**3,964,943**

General Fund Revenues

A majority of General Fund Revenues continue to come from Property and Sales Tax:

- $20,075,533 (51%) comes from property taxes and special taxes
- $6,478,033 (16%) from sales tax
- $4,352,462 (11%) from utility users tax
- $4,141,520 (11%) from current city services
- Remainder 11% from use of money & property, and other revenue sources

General Fund Expenditures

The goal for the Fiscal Year 2023-24 budget season was to build a status-quo budget based on a zero-based budget, which allowed each Department to go through the exercise of starting from zero to build their respective budgets from the ground up, and to justify every line item. This exercise led to the leaning out of the budget to provide for the funding to make some priority and necessary staffing growth. Employee Wages and Benefits, and City Operations and Maintenance make up more 97% of Expenditures. Increases are due to Employee Labor negotiations and salary adjustments to bring staff that were significantly behind (10-30%) up to more comparative salaries. In this budget we also ask for funding for a complete Comprehensive Classification and Compensation Study to further delve into our staff positions, pay and wages.

As signified in the Midyear Budget report to City Council and Finance Commission, the City continues to feel the impact of inflation, with rising costs to doing business, purchasing goods and materials, across the board.

- $27,102,511 (68%) wages & benefits
- $12,270,055 (31%) operations & maintenance
- $258,000 (1%) capital projects

Positional Changes

- Add one new full-time Accounting Technician I in Finance
- Upgrade two part-time Management Aide positions to one full-time Management Aide position in Community Services
- Upgrade one part-time Community Services Coordinator to one full-time Community Services Coordinator in Community Services
- Upgrade one part-time Management Aide to one full-time Management Assistant in Fire
- Add one new full-time Human Resources Specialist position in Management Services
- Upgrade one part-time Community Improvement Coordinator to one full-time Community Improvement Coordinator in Community Development
- Add one new full-time Management Assistant in Community Development
- Add one new full0time Principal Engineer in Public Works
- Add one new full-time Water Operations Supervisor in Public Works
- Add one new full-time Management Analyst (Water/Sustainability) in Public Works
- Add one new full-time Sergeant (Office of Professional Standards) in Police
- Add one new full-time Police Clerk I in Police
- Add one new full-time Police Administrative Assistant in Police

General Fund Operating Expenditures by Type

The chart below summarizes the General Fund Operating expenditures by types from FY 2019/20 to the Proposed FY 2023/24.

General Fund Operating Expenditures by Type

Fd	Category/Fund	Actual 2019/20	Actual 2020/21	Actual 2021/22	Budgeted 2022/23	Estimated 2022/23	Proposed 2023/24

General Fund Operating Expenditures By Department

The chart below summarizes the General Fund Operating expenditures by department from FY 2019/20 to the Proposed FY 2023/24. Of note for this fiscal year:

- Public Safety, composed of the Fire and Police Departments, accounts for 48% of the General Fund budget.
- While the Public Works General Fund portion is only 10%, it is important to note that other functions of the department are accounted for in other funds such as the Water, Sewer and other special funds.

General Fund Operating Expenditures by Department

Department/Program Exp	Actual 2019/20	Actual 2020/21	Actual 2021/22	Budgeted 2022/23	Estimated 2022/23	Proposed 2023/24

FY 2023/2024 Budget Policies Draft

PURPOSE STATEMENT

To enhance fiscal transparency and maintain and improve fiscal sustainability, the City of South Pasadena annually adopts fiscal policies to establish a framework to ensure a balanced budget, maintain healthy reserves, appropriately fund the City's infrastructure needs, establish fees and charges, and ensure compliance with City Council directives. This policy is adopted annually as part of the Budget adoption process and may be revised by City Council action.

1. ANNUAL BUDGET

The City adopts an annual budget. The City's fiscal year starts on July 1st and concludes on June 30th. The annual budget for the new fiscal year will be adopted before June 30th.

The following are key elements of the City's budget and budget process:

- Budgetary appropriations are made by the City Council, through formal budget adoption.
- The City Manager submits the Proposed Budget to the City Council no later than the final City Council meeting in May.
- The budget is adopted by the City Council before June 30th, following a public meeting where constituents are given an opportunity to comment on the Proposed Budget.
- Prior to consideration by the City Council, the Proposed Budget will be reviewed by the Finance Commission.

2. BALANCED BUDGET

The City strives to maintain a balanced operating budget for all governmental funds (all funds except the enterprise funds), with total on-going revenues equal to or greater than total on-going expenditure, so that at year end all these funds have a positive fund balance and the General Fund balance is maintained.

- The budget is balanced at the individual fund level. The estimated revenue sources must be sufficient to cover proposed uses.
- Ongoing operations are funded by recurring revenues.
- City policies on reserve requirements for specific funds are adhered to in the budget.
- If shortfalls are projected after the budget adoption, during quarterly financial reviews, the City Manager will present a plan to address such shortfalls with sustainable measures in order to achieve a balanced budget by fiscal year-end.
- Non-recurring revenues or one-time funding may be used to balance the budget during economic downturns, or as a result of unforeseen events.

3. APPROPRIATIONS AND BUDGETARY CONTROL

DRAFT

The City Council holds public hearings and adopts the City's annual budget and may modify appropriations with majority approval. During the fiscal year, any budget adjustments (increases in appropriations at the fund level) that cannot wait for the Mid-Year review or that exceed the City Manager's budget authority described below, must be submitted by the City's departments for City Council review and approval. The review and approval may occur at any City Council meeting, at the request of staff or the City Council. The City Council approves any revisions that increase the total budgeted expenditures or revenues at the fund level, and any changes to permanent and full-time positions.

The legal level of expenditures is controlled at the fund level, and appropriations lapse at the end of each fiscal year. Re-appropriation by the City Council only occurs for multi-year infrastructure and capital projects.

Department Heads may, without Council approval, amend individual line items within any fund in the maintenance and operations portions of the budget without increasing total appropriations for that division. The City Manager may, without Council approval, amend individual line items within any fund, and between divisions and programs, in the personnel costs, maintenance and operations, capital outlay and capital projects portions of the budget without increasing total appropriations for that fund.

4. GENERAL FUND RESERVES

General Fund Reserves are described as:

- Unassigned Fund Balance - These reserves are in spendable form and may become either restricted, committed, or assigned. The City strives to attain a General Fund undesignated fund balance equal to a minimum 30% of General Fund revenues at year end.
- Assigned Fund Balance – These reserves are set aside or earmarked for particular purposes, and the authority to designate these reserves can be delegated, and may take less formal action to limit how the reserves are used.
- Restricted Fund Balance – These reserves are subject to restrictions that are legally enforceable by outside parties, such as bondholders.
- Committed Fund Balance – These reserves are designated by the City Council, and are designated for specific purposes, through formal action. Committed balances can be modified by the City Council taking formal action.

Committed (Designated) Reserves shall be reviewed and designated annually by the City Council prior to Budget adoption. Upon designation of a reserve for a specific purpose, the Council will ensure the following:

- The purpose of the reserve will be specified at the time of designation.
- The City Council will also identify whether the designation is a one-time designation or whether an amount specified by the City Council will be added to the designated reserve on an annual basis.

DRAFT

- Nothing limits the City Council's authority to un-designate, or re-designate any General Fund Designated Reserve for another governmental purpose, pursuant to formal City Council action.

5. ENTERPRISE FUND

The City requires the water, sewer, and golf course enterprise funds be self-supporting. The City recognizes that enterprise funds function with accounting practices that are different from those used by governmental funds. Therefore, for enterprise funds, the City will strive to maintain operating budgets that produce annual net revenues that meet or exceed the compliance requirements of debt coverage rations generally.

The sewer fund was recognized as an enterprise fund starting in FY 2009/10, with the requirement of self-supporting funding. Water and sewer rate increases will assure that revenues exceed operating expenditures, including debt service. Budgeted water capital projects will be paid from a $37.8 million 2016 Water Bond issuance. Bond debt service will be paid out of water revenues. Sewer revenues along with a revolving loan from the State will pay for sewer capital improvements.

The Water Fund will maintain a reserve equal to 30% of revenues. The Sewer fund will maintain a reserve equal to 30% of revenues.

6. INFRASTRUCTURE

The City maintains a long-range fiscal perspective through the use of a Capital Improvement Program to maintain the quality of City infrastructure, including streets, sidewalks, sewers, drains, lighting, buildings, parks, and trees. The City Council adopts capital projects budgets and may modify appropriations with majority approval. All changes in appropriations at the fund level during the year must be submitted to the City Council for approval.

Beginning in FY 2013/14, the City's goal has been to commit a minimum of $2,000,000 per year towards street improvements. This amount has fluctuated based upon available resources

7. ACCOUNTING AND REPORTING STANDARDS

The City will comply with all requirements of generally accepted accounting principles, and will publish an Annual Comprehensive Financial Report (ACFR) in compliance with generally accepted accounting principles, prepared in coordination with our independent auditors, no later than the first quarter of each calendar year. The ACFR, along with the Auditor's report on internal controls and compliance, will be presented to the City Council at a public meeting, after first being presented to the Finance Commission. The City shall endeavor to achieve audits with minimal auditor findings in the form of significant deficiencies. The City shall swiftly and thoroughly respond, to auditor findings of material weakness.

DRAFT

8. MIDYEAR AND INTERIM FINANCIAL REPORTING

The City will publish a midyear budget update in March of each year. The midyear budget update shall present estimated outcomes and the implications for the budget year. The report shall give attention to the financial issues and policy matters anticipated to have the most significant short and long-term financial planning importance to the City Council. Pursuant to the content of the midyear report, the City Council shall provide specific and general direction to staff for short- and long-term budgetary planning.

To comply with the policy, the City Manager will ensure the following:

- The midyear budget update will be presented to the City Council in February or March of each year.
- At the midyear budget update, staff will present to the City Council any necessary adjustments to the budget. The adjustments are based on additional funding, or major changes in revenues or expenditures, or previously approved budget adjustments.
- Monthly budget updates will be provided to the City Council starting in the Spring of 2023.

9. RISK MANAGEMENT

The City will identify and quantify all areas of financial and operating risk, and prepare contingencies for those risks, including legal liabilities, infrastructure maintenance, emergency response, and contract and employee obligations. The City will work with the City's insurance providers to seek full coverage of actuarially projected needs.

Liability and Workers Compensation liability is reported in accordance with GASB 10, and further explained below.

- The City manages risk through a combination of purchased insurance and self-insurance.
- The City self-insured workers' compensation claims with a self-insured retention of $125,000 and general/auto liability claims, with a self-insured retention of $100,000 per covered claim. Excess workers' compensation and general/auto liability insurance coverage shall be purchased.
- An annual actuarial study shall be conducted to provide an estimate of the self-insured liability to be recorded by the City in accordance with Governmental Accounting Standards Board Statement No. 10. This statement requires the City to accrue a liability on its financial statements for a reasonable estimate of the cost of claims and expenses associated with all reported and unreported claims.
- The City's goal is to maintain reserves to fund its outstanding self-insured liabilities at the minimum level of 70 percent.
- The City shall maintain a Self-Insurance Fund to both fund the liability reserve and workers compensation, and recover all associated risk management costs, including claim payments, insurance premiums and any deductibles, and claim

DRAFT

administration (internal and external). The fund's revenues shall be generated through assessments to City funds based on their claim experience and outstanding liabilities. These departmental assessments shall be evaluated annually and adjusted as needed.

- Staff shall report to the Finance Commission and City Council at least annually on the claims processed, amounts paid, and steps taken to manage and reduce the City's risk and liability.

10. DEBT AND INVESTMENTS

The City will consider the use of debt for long-term capital assets when the cost of debt is lower than the City's investment return, and when operating revenues are available to pay the debt. We will maximize the investment return on City Cash balances within the higher concerns of safety and liquidity. An investment policy will be submitted annually to the City Council for review and adoption in September or October of each year. The City shall at all times maintain compliance with the California Government Code with respect to the content and function of its Investment Policy.

Annually, the Investment Policy is reviewed by the City's Finance Commission, prior to being approved by the City Council. Additionally, the City Treasurer shall provide monthly reports to the City Council which shall include all reportable elements specified in the City's Investment Policy.

11. CONTROL OF FINANCIAL ASSETS

All financial assets will be under the direct authority of the City Treasurer and Finance Director. Regarding Capital Assets, the City will capitalize assets and equipment with individual minimum value of $5,000 for non-infrastructure assets, and $25,000 for infrastructure assets.

12. SCHEDULE OF FEES FOR SERVICES

The City will publish, and the Finance Department will update, the schedule of fees for services as a component of the annual budget. The Fee Schedule will be reviewed by the Finance Commission prior to implementation each July 1st.

.

13. LONG-TERM LIABILITIES

The City shall evaluate long-term liabilities (debt borrowing, compensated absences, claims and judgements, pensions, post-employment benefits (OPEB), on a case by case basis. The City will work with the California Public Employee Retirement System and the City's insurance providers to seek full coverage of actuarially projected needs.

Funding is budgeted on a pay-as-you-go basis for leave liabilities, and retiree health insurance costs. In accordance with GASB 45, a third-party actuarial valuation of the City's liability for annual retiree medical costs has been completed every two years since FY 2008/09.

DRAFT

14. GANN APPROPRIATIONS LIMIT

The City will annually adopt a Resolution establishing the City's appropriation limit (the Gann Limit) calculated in accordance with Article x111-B of the constitution of the State of California Government code and any other voter approved amendments or state legislation that affects the City's appropriations limit. The Gann Limit will be adopted by Resolution.

The City is restricted to an amount of annual appropriations from proceeds of taxes, and if proceeds of taxes exceed allowed appropriations, the excess must either be refunded to the State Controller or returned to the taxpayers through revised tax rates or revised fee schedules. Alternatively, an excess of one year, may by offset against a deficit in the following year.

City Council

Fiscal Year 2023-24 Budget Snapshot

Overview

The City Council is the elected legislative body of the City. The City Council consists of a Mayor and four Councilmembers, each elected at large for four overlapping terms. The City Council represents the City's citizens, analyzes and approves all laws and policies, authorizes all expenditures through the budget, and directs the administration of the City government through the City Manager.

Notable Changes – Wages and Benefits

No significant changes to Wages and Benefits.

Notable Changes – Operations and Maintenance

Additional postage funding for District Mailings, Carry-Over of Discretionary Funds from prior Fiscal Years, and Funding for State of the City, Community Budget Sessions, and Strategic Planning Sessions.

Capital Outlay

No items budgeted for Capital Outlay.

DRAFT

City Council / 101-1010-1011

Provides funds for Strategic Planning Sessions: logistics, refreshments, supplies, recording. Provides funds for purchase of meeting-related presentation materials, accessories, and supplies for tablets and related devices ($8,000).

DRAFT

City Manager

Fiscal Year 2023-24 Budget Snapshot

Overview

The City Manager is appointed by the City Council and serves as the Chief Administrative Officer, ensuring that the policies of the Mayor and City Council are executed effectively and efficiently. Specific areas of responsibility include oversight of seven operating departments, public information and public engagement, legislative tracking, following up on citizen concerns, providing recommendations to promote organizational efficiency and overseeing the development and presentation of the annual budget.

The City's Economic Development Division is housed under the City Manager's Office, and is the liaison to the business community, focused on efforts to strengthen and grow the local economy, and serves as a liaison to business affairs at City Hall. The Division oversees the communications and engagement efforts of the City, including marketing, branding social media and the City's website.

Notable Changes – Wages and Benefits

Due to organizational restructuring, City Manager has become its own department and is now separated from Management services. City Manager has 5 FTEs for Fiscal Year 2022-23. One part-time management intern has been added.

Notable Changes – Operations and Maintenance

Funding included for Annual Social Services and Social Justice Forum, Social Services Resource Guide, Executive Team Engagement, Veteran Events, mailings of State, Regional, and Legislative correspondence in line with the adopted Legislative Platform, GoGov Citywide Mobile App, Holiday Lighting Décor, and Guide to Doing Business brochure.

Capital Outlay

No items budgeted for Capital Outlay.

Public events promotion (Total $5,000).

Key Performance Indicators

The City Manager's Team is focused on improving the quality of life for residents, businesses and employees. With the move of Economic Development to the City Manager's Office, the City Manager's team is redefining community outreach and engagement, business support and service. A commitment to Strategic Plan goals and active legislative efforts ensure furthering the community's priorities while protecting and preserving quality of life in South Pasadena.

Public Engagement/ Community Outreach

Continue to establish and explore best practices in conducting community outreach, including:

- 150-300 new photos of the City, Departments and staff for marketing and documents for FY2023.
- 1,000 new followers across social media by the end of FY2023.
- Develop and launch new City website to the community.
- Work with Departments and Divisions to ensure community engagement is prioritized including use of surveys, workshops, input sessions and other engagement and engagement tools.

Economic Development

Continue to establish and explore best practices in Economic Development:

- Visit 100 businesses in the community.
- Explore enhanced branding plan for City's Downtown District.
- Continue hosting quarterly business networking events.
- Establish City Council sub-committee on Economic Development.
- Establish program to welcome new businesses to the City.

Establish and Prioritize Healthy Workplace Culture

- Establish City-wide internship and professional shadowing programs.
- Host quarterly Mid Manager's Meetings.
- Lead and bolster Employee Engagement Team (EET) and citywide efforts.
- Review and implement the USC Capstone Team Diversity, Equity and Inclusion Implementation Plan.

Social Services

Continue to prioritize providing Social Services outreach and resources to the community:

- Establish Veterans Census to plan for Veteran specific outreach.
- Host a Veteran's Appreciation Day by FY2023.

Legislation

- Establish Legislative Tracking program by FY2023.
- Continue to participate in and network with legislative partners

Management Services

Fiscal Year 2023-24 Budget Snapshot

Overview

Mission

The Management Services Department is committed to being a collaborative and innovative partner in delivering essential services to our internal and external customers in a way that is helpful, caring, and responsive. We accomplish this through the innovative use of skills, knowledge, technology, and an investment in human capital.

Core Values

- Teamwork
- Inclusivity
- Integrity
- Pride
- Transparency
- Stewardship
- Innovation
- Respect
- Wellness
- Attitude

Core Services

- **Management Services:** Innovation and Technology (IT), Grants Management, and Special Projects
- **Human Resources and Risk Management:** Human Resources Management, Recruitment, Employee Training, Labor Relations, Safety, and Risk Management
- **City Clerk:** Records Management, Elections, Boards, Commissions, and City Council Support

Notable Changes—Wages and Benefits

There is an increase in wages and benefits, as the Department is adding three full time positions (Senior Human Resources Analyst, Human Resources Analyst and Human Resources Specialist). It should be noted that the Senior Human Resources Analyst and Human Resources Analyst positions are reclassifications of two management analyst positions in the Human Resources Division.

Notable Change—Operations and Maintenance

For Fiscal Year 2023-2024, the City Clerk Division will be accounting for advertisement costs for all departments, and all innovation and technology items have also been moved to the Innovation and Technology funds.

Capital Outlay

Funds are included to begin to phase out end of life technology equipment citywide, and begin a replacement cycle to create and maintain effective operations.

Ongoing Initiatives, Goals, and Objectives

Innovation and Technology (IT)

- Modernize and maximize the business value and resiliency of technology services.
- Work with departments to identify ways technology can improve efficiency.
- Advance IT-managed service delivery by improving oversight and focusing on operational excellence.
- Secure the City's data and technology and improve our cyber security posture.
- Educate and train staff regarding possible cybersecurity threats by implementing a program to comprehensively train city technology users, provide baseline testing, and mitigate potential risks associated with phishing attacks.

Human Resources

- Continue to attract, develop, and retain a well-qualified and diverse workforce, and fill vacancies in a timely manner.
- Continue to seek and implement efficiencies that will improve the way we deliver services to employees and customer departments.
- Continue to offer citywide training and development opportunities and take full advantage of our new learning management system to link training to core competencies better.
- Continue employee engagement efforts, and develop a plan aimed at reducing employee turnover and increasing job satisfaction.

City Clerk

- Provide customers with accurate and thorough information and access to city council meetings and election resources.
- Embrace cutting-edge technology and industry best practices to increase efficiency, transparency, and accessibility.
  Adhere to state and local mandates and deadlines related to city government.
- Streamline public records act requests processing and implement a public records request management program.
- Improve the City's record retention practices and implement a comprehensive records management program.
- Work to provide all Commission and elected officials relevant training, including Brown Act and ethics training (AB 1234 and AB1661).

DRAFT

Key Performance Indicators

The Management Services Department oversees the Human Resources and Risk Management Division, the City Clerk's Division, and Information Services. The department is focused on effectively centralizing management of citywide grants and contracts, establishing and implementing the Grants Manual and Policy Document, hosting monthly grant meetings with all Departments to ensure compliance and provide training, providing secure and reliable technological infrastructure for the City by completing and implementing initiatives in the Technology Master Plan, and updating administrative policies.

FY 2023 Accomplishments

Human Resources Division:

- Implemented an Employee Recognition Program – Employee Excellence Awards
- Hosted a Benefit & Wellness Fair
- Completed a Benefits and Compensation Study
- Implemented an automated recruitment tracker to share with Departments as recruitments progress.
- Implemented a Personnel Requests component to budget development process.

City Clerk Division:

- Collaborated with the County of Los Angeles to successfully conduct the November 8, 2022, General Municipal Election
- Completed Advisory Body Appointments and Reappointments
- Implemented efficiencies by working to digitize and preserve vital City records.
- Began the process of upgrading the City's electronic record management system

Information Technology Division:

- Began the process of replacing aging technology equipment by creating and implementing an asset management system to track IT inventory and replacement cycles
- Implemented a mobile device management program to track and inventory city-issued cellular devices
- Worked with IT Consultant to develop a five-year budget/ program for the replacement of the City's aging technology and to plan for upcoming IT projects.
- Audited technology citywide in order to develop a replacement cycle
- Implemented a project to consolidate mobile phone lines
- Began the process of upgrading the City's aged analog phone system
- Migrated all City staff to the City's new collaboration tool Microsoft Office 365
- Consolidated the leasing of multifunction printers across all City Departments

DRAFT

FY 2023 Key Performance Indicators Update

During the development of the Fiscal Year (FY) 2023 budget, the Management Services Department committed to working towards Key Performance Indicators (KPI). As reflected in the FY 23 accomplishments above, staff has done a commendable job at working towards meeting those KPIs.

City Clerk's Office

In FY 23, the City Clerk's Office made significant strides in enhancing customer service through innovation. The Division also experienced significant turnover and staffing challenges, which were addressed with the assistance of temporary staffing services. The turnover in staffing did cause delays in implementing projects, but it also allowed staff to analyze the path forward and create a plan. The City Clerk's Office is working closely with the City Manager's Office in procuring services for a new user-friendly website. A Request for Proposals (RFP) was issued by the CMO, and this project is expected to be completed in the next fiscal year. Along with the joint effort of procuring a new website, the Division began the selection process for the procurement of an agenda management program to streamline the agenda process and will be implementing the selected program in FY 2024. Core operations of the City Clerk Division, such as agenda processing, clerking city council meetings, and assisting commissions, continued without interruption this fiscal year. The Division worked closely with all commissions and the City Manager's Office to implement a Commissioner's/ Elected Official's Handbook to welcome and provide incoming elected officials with the tools and background information for their roles. The City Clerk's Office hosted AB1234 training for all elected officials and staff liaisons. The second annual Commissioners' Congress was also held this fiscal year. The Division successfully coordinated with Los Angeles County to hold the General Municipal Election in November 2022 and then held a reorganization ceremony for the outgoing and incoming elected officials. This fiscal year, the Division is in the process of completing the backlog of minutes for city council meetings, which consisted of over years' worth of meetings. To date, for FY 23, the City has received an unprecedented amount of public records requests. Since July 1, 2022, the city has received 469 requests, with less than 3 months remaining in FY 23. All but seven of those requests have been responded to and closed out.

Human Resources and Risk Management

In FY 23, the Human Resources and Risk Management Division experienced significant turnover and staffing challenges but has continued strong momentum in improving the organizational culture and building a strong employer brand to attract and retain top-caliber candidates. This fiscal year, the Human Resources Division made investments in employee development by purchasing a new learning management system (LMS) through NEOGOV. The implementation is well underway and is expected to be completed by the end of FY 23. Additionally, in efforts to enhance the employee experience, Human Resources will be revamping the employee onboarding process through the implementation of NEOGOV Onboard. The Human Resources Division kicked off the first Health and Wellness Fair and, through the Employee Engagement Team (E.E.T), had a successful summer BBQ, Halloween celebration, and holiday luncheon that also served as an opportunity to recognize staff and honor years of service to the City. The Division has proactively offered several training opportunities citywide through our partnership with LCW. On the Risk Management side, the Division is undergoing an internal review of our processes and procedures and working with our third-party administrators (TPAs) to improve communication flow and assess ways to increase efficiency in the claims process. On the Risk Management side, the Division worked closely with our Police Department partners to roll out

DRAFT

Active Shooter training citywide Division has compiled a full accounting of our claim's history for the last two years and has begun efforts to identify high-risk areas for mitigation. For the FY 24 budget development process, HR developed Budget Instructions and forms for departments to request changes to their personnel structure and positions formally and have worked closely with the Finance Department during budget development.

Innovation and Technology (IT)

In FY 23, the Management Services Department (MSD) made great strides in internally assessing our Information Technology infrastructure and needs. In FY 23, the department invested significant funds in updating computers and workstations citywide and will continue this effort into FY 24. In collaboration with our managed service provider, the City's Technology Master Plan was updated to reflect better the needs of the City, and important new tools were implemented to improve transparency and understanding of the City's infrastructure. As part of the hybrid work program, MSD has increased the deployment of laptops and started to phase out older PCs. A significant effort was made to consolidate many mobile phone carrier accounts, which has led to cost savings and more accurate billing. A major investment in technology was made to transition the City to the cloud-based Office 365 system, and the implementation of that system is underway and is expected to be fully implemented by the end of FY 23. MSD also replaced our aging multi-function devices (MFDs) with new leased machines, which also resulted in cost savings for the City. By the end of FY 23, MSD hopes to wrap up demonstrations and review initial proposals for a new Voice Over IP system (VoIP), to replace our legacy landline phone system that is out of date and in serious need of upgrading. On the cybersecurity front, MSD hopes to implement a new training and mitigation tool citywide to educate and train staff on potential cybersecurity threats to our organization's security.

Grants and Contracts

The Department has worked to centralize the tracking and execution of contracts. The City Clerk's Office has been delegated the responsibility of continuing to build on initial efforts. The Department has a centralized contracts tracker and is in the process of issuing official city contract numbers to make tracking easier. Our Senior Management Analyst has also worked with different departments regarding grant reporting and compliance obligations.

DRAFT

FY 2024 Key Performance Indicators

As the Department has developed, staff has had the opportunity to review the existing performance measures. New KPIs are listed below for FY 24 that better reflect organizational goals and priorities.

City Clerk

Records Management
Establish and implement a records Management program to account for and maintain citywide records by:
(Strategic Plan - 6d)

- Conducting a comprehensive inventory on all physical citywide records currently in storage.
- Implement and upgrade Laserfiche software and public portal to increase transparency, manage records, and increase public accessibility to City records.
- Seek imaging/scanning vendor to conduct a bulk scan of all documents into our Laserfiche program.
- Host staff training on records retention policy. *(Strategic Plan – 6h)*
- Host a "Records Clean Up Day" for city staff, to include review of physical and electronic records for destruction and storage.

Agenda Management
Establish and implement an Agenda Management Software and program to increase efficiency and productivity. *(Strategic Plan - 6d)*

- Acquire Agenda Management Software to decrease staff turnaround time due to the current process/workload.
- Host staff training on Agenda Management Software and new process. *(Strategic Plan – 6h)*
- Implement an Agenda portal on the City Website to increase public transparency in the agenda process and city business.
- Conduct an online survey via the city mobile app and city website for the public and staff to provide feedback on the new software. *(Strategic Plan – 6h and 6e)*

Public Records Request Management Software
Implement Public Records Request Software that manages requests and reduces review periods by automating workflows. *(Strategic Plan - 6d)*

- Acquire a Public Records Request Management Software to increase accountability, ensuring public transparency.
- Host staff training on PRR Management Software to assist in quick response times and easy navigating of the new program. *(Strategic Plan – 6h)*
- Implement a PRR portal on City Website to allow access to city records by the community.
- Conduct an online survey via the city mobile app and city website for the public and staff to provide feedback on the new software. *(Strategic Plan – 6h and 6e)*

DRAFT

Human Resources and Risk Management:

Establish and Support Organizational Effectiveness (Strategic Plan – 6C) by:

- Development of comprehensive administrative policy manual. Review existing City Rules and Regulations to determine revisions needed. Will require consulting with attorney and labor groups.
- Auditing FT Employee Files within Springbrook on a quarterly basis for benefit accuracy.
- Hiring a consulting firm to conduct a functional job analysis to identify the essential functions of a job. Will need to create an RFP for consultative services.

Continue to support and promote the Employee Experience (EX) and City Workplace Culture (Strategic Plan – 6H) by:

- Increasing employee retention and reducing employee turnover by 15% by continuing efforts for employee engagement such as sending out an annual employee survey to gather feedback, sponsoring at least four employee engagement events, and highlighting employee contributions through awards and recognitions during one of those events.
- Revamping the performance evaluation process to include an update to our performance appraisal form and tracking mechanism in NEOGOV, with the goal of 100% of evaluations being issued timely to staff.

Risk Management (No strategic alignment available)

- Conduct a cost/coverage analysis of existing city insurance plans by comparing them with other insurance options available, such as increasing/decreasing self-insurance retention (SIR), pooling and/or excess coverage in time for insurance renewals.
- Provide quarterly loss data reports to Departments to strengthen partnership in mitigation efforts.
- Update City's Injury Illness and Prevention Plan (IIPP) to confirm with current OSHA requirements.

Recruitment (Strategic Plan – 6I)

- Implement NEOGOV Onboard to streamline the pre-employment phase, goal of reducing time to hire by 25%.
- Upgrade recruitment tracker to Infinity platform to automate tracking process and provide in real time reporting for Directors, identifying bottlenecks in the process.
- Implement new training opportunities through LEARN.
- Update recruitment advertisement materials to highlight our benefits better. Consult with neighboring cities for best practices & update our recruitment flyers.
- Attend (2) local career fairs to establish a City presence as an employer of choice.

DRAFT

Information Technology
Continue to improve technology across Departments (Strategic Plan-6d) by:

- Implementing the first year of a three-year replacement cycle for technology hardware
- Completing the implementation and migration to Microsoft Office 365
- Implementing cybersecurity software/ program to assist in monitoring threats and educate staff on best practices to minimize risk.
- Upgrading the City's analog phone system to a modern digital phone system.
- Upgrade the City's end of life servers by October 2023.
- Upgrade the City's end of life networking equipment by December 2023.

Summary of Changes

Human Resources and Risk Management

- HR Division is adding a Human Resources Specialist to provide administrative and clerical support so that the Human Resources Analysts can focus on higher-level work and projects.
- Includes the reclassification of the two management analyst positions in the HR Division to Senior HR Analyst and HR Analyst
- Includes an increase in funds for employee engagement, retention, and recognition activities to support employee retention and wellness.
- Includes funds for employee onboarding packets
- Includes the completion of a Classification and Compensation study that was budgeted in FY 23 but not completed due to staff turnover

City Clerk Division

- Agenda Management Software to streamline agenda process
- Inclusion of advertising costs for Departments that do not budget for such costs

Information Technology

- IT Consultant costs budget increased in order to properly reflect the actual expenditures incurred through the firm for IT support
- Includes funds for the first year of a three-year plan of technology replacements
- Includes funds for membership to MiCTA, for access to IT contracts for City's use for piggy-backing in an effort to lessen the impact of costs for aging technology
- Includes annual subscription costs for Microsoft Office 365

DRAFT

Finance

Fiscal Year 2022-23 Budget Snapshot

Overview

The Finance Department accounts for all City and Successor Agency expenditures, administers business licensing and water billing through third-party vendors, accounts for revenue collection, performs city wide accounting functions, including grant accounting, processes the biweekly payroll through a third-party vendor, prepares payment of all obligations for review and approval by the City Council, and sends out approved check warrants. In conjunction with, and subject to the independent certification of the City/Agency independent audit firm, the Department prepares the City's Annual Comprehensive Financial Report (ACFR). The Department also prepares annual reports for the State Controller and other State and Federal agencies. Under the direction of the City Manager, the Department prepares the City's annual budget.

The Finance Department oversees the utility billing function by utilizing a third-party vendor for the City's approximately 7,000 accounts for all water, refuse and sewer fees. The Department works with the City Treasurer, Finance Commission, and committees with respect to the various financial issues. As required by the Government Code, monthly investment reports are provided to the City Council summarizing investment holdings and rates of return on investments.

Notable Changes – Wages and Benefits

Overall, the full-time permanent salaries show an increase as the budget includes funds for a permanent full time Finance Director as well as a full year's cost of a full time Management Assistant position authorized by the City Council in FY 2022-23. Compared with FY 2022-23, part-time, temporary staff salaries show a decrease, due to the hiring of a full time Management Assistant and Accounting Technician I, versus the previous use of part-time interim and temporary staff.

Notable Changes – Operations and Maintenance

The Finance Department expects an increase in special departmental expenses and professional services. The Department will work with an outside vendor to conduct a Master Fee Study and Cost Allocation Study to update our fee schedules.

Capital Outlay

No items budgeted for Capital Outlay.

Provides ($338,100) toward contractual support service with Munibilling, the company that provides the Finance Department's utility billing processing. Also provides portion of annual city audit services, ($23,400), a share of the GASB 34 infrastructure assets valuation with Community Economic Solutions ($1,200) and investment management fees to Morgan Stanley and Western Asset ($54,000). (Total $416,700)

8200 Training
Provides funds for training seminars for Finance Department staff ($2,504).

8400 Overhead Allocation
Charges for administrative services provided by the General Fund ($91,980).

DRAFT

Key Performance Indicators

The Finance Department is responsible for accounting, revenue, treasury, debt administration, payroll, budget, and purchasing functions. We strive to work efficiently and effectively. We are dedicated to providing our City Council, City Commissions, City Manager, City departments, employees, and diverse community with efficient and courteous service.

Accounting Management

The Finance Department completed their audit and financial report by February 2023 and filed the following reports in a timely manner: Annual Comprehensive Financial Report with an unmodified “clean” audit opinion, State Controller’s Report, State and Street Report, and Metro Audit. The Finance Department also produced 12 Treasurer’s Reports for City Council, issued 3,569 warrants in FY 21-22, issued 115 1099s for Calendar Year 2022, and approved 825 journal entries in FY 21-22.

Payroll

The Finance department has successfully moved the payroll task in house for FY 22-23. In FY 22-23, we distributed 269 w-2s and 162 1095-Cs to employees. Finance has 207 direct deposit participants and 63 deferred compensation participants. Our goal for FY 23-24 is to implement the Springbrook Employee Self Service portal. This will provide an additional level of transparency for employees as they can view their w-2s and bi-weekly paychecks online.

Revenue

The Finance Department is responsible for ensuring revenue is recorded in a timely manner. In FY 22-23, Finance issued 1,500 business licenses, reviewed over 2,400 bank deposits, and secured 162 filming/special events permits.

Enterprise Resource Planning Upgrade

Finance currently utilizes a software called Springbrook for its accounting needs and resources. We have placed a hold on moving this platform into the cloud as we navigate our options.

DRAFT

City Treasurer

Fiscal Year 2023-24 Budget Snapshot

Overview

The City Treasurer is an elected position and is responsible for the management and oversight of the City's idle cash and its investments upon order of the City Council. The Treasurer receives and safely keeps City funds, provides overall investment management and strategy, administers the City's banking relationships, reports periodically to the City Council and the City's Finance Commission, and submits an annual investment policy to the City Council.

Notable Changes – Wages and Benefits

No significant changes to Wages and Benefits.

Notable Changes – Operations and Maintenance

No items budgeted for Operations and Maintenance.

Capital Outlay

No items budgeted for Capital Outlay.

7010 Salaries – Temp / Part

Funds monthly stipend of elected City Treasurer. The Treasurer's stipend is authorized by Government Code and City resolutions.

DRAFT

Police

Fiscal Year 2022-23 Budget Snapshot

Overview

The Police Department provides a full range of law enforcement and crime deterrence services. Services include street patrol, traffic patrol, crime investigation and analysis, parking enforcement, and a community crime prevention program. Support services for sworn officers include training, records, property evidence, dispatch center, and administrative support. As a reflection of the community, the Police Department has enhanced its diversity by increasing the number of female police officers to three.

The South Pasadena Police Department is comprised of 34 sworn officers including Lieutenants, Sergeants, Corporals, Deputy Chief of Police and Chief of Police, 18 full-time non-sworn personnel and additional part-time non-sworn personnel including Police Cadets. The department is augmented with an additional four Reserve Officers and a volunteer Chaplain.

Notable Changes – Wages and Benefits

The Police Department intends to fill all vacancies and bring the level of staffing up to authorized strengths. The overtime exceeded expectations is due to unfilled vacancies, increased patrol for special assignments and COVID-19 related absences. In Fiscal Year 2022-23, the Police Department had an increase in overtime due to unfilled vacancies, and COVID-19 related absences.

Notable Changes – Operations and Maintenance

To become more sustainable and support the City's Green Action Plan, the Police Department is moving towards the electrification of its fleet of vehicles. The contract for crossing guards with All City Management was increased to reflect the return to in-person learning and a traditional school calendar.

Capital Outlay

The COPS Grant is funding the new Computer Aided Dispatch and Records Management System.

Budget Detail

PERSONNEL SERVICES

7000 Salaries – Regular Employees
Funds for all full-time, permanent sworn and civilian employees' salaries.

7010 Salaries – Temporary/Seasonal/Part-Time
Funds seasonal, temporary and other non-salaried part-time employees, including Police Cadets, compensation.

7020 Overtime
Covers the cost of overtime for non-management personnel. Overtime is used for duties that cause an employee to work beyond their scheduled end-of-shift, court appearances and court on-call status during off-duty hours, and overtime required to fill minimal staffing requirements. Overtime has increased due to COVID-19 related absences. Efforts will be made through negotiated agreements with the police officers' association to reduce nonessential overtime costs, however, overtime due to burglary suppression efforts will continue. The use of reserve officers whenever possible has kept these costs down. Total ($885,071).

7040 Holiday
Funds overtime compensation for employees required to work on Holidays. Total ($226,708).

7045 Overtime – Filming Detail
Funds the cost of overtime for providing security at filming locations. The City is reimbursed fully by the film companies for this overtime.

7050 Overtime – DUI Checkpoint
Funds overtime compensation for DUI checkpoint staffing.

7060 IOD – Safety
Funds Injury on Duty (IOD) overtime.

7070 Leave Buyback
Funds employees who opt to sell back hours of their leave balances ($13,683).

OPERATIONS & MAINTENANCE

8000 Office Supplies
Funds the purchase of Police report forms; Detective and Records case file folders, office stationery, miscellaneous office, kitchen and COVID-19 supplies. Total ($29,000).

8010 Postage
Provides funds for Police Department postal expenses. Vendors Pitney Bowes and

DRAFT

FedEx. Total ($5,250).

8020 Special Department Expense

DRAFT

Key Performance Indicators

The South Pasadena Police Department meets the needs of the community by providing professional services to safeguard the city in crime prevention. Community outreach is accomplished by active patrols, educational programs, and social media through the City's website. The Key Performance Indicators (KPI) for the department demonstrate the need to quantify its information in a concise and articulate manner.

Computer Aided Dispatch and Record Management System (CAD/RMS)

- On March 22, 2022, the Motorola Flex System went into effect, bringing the South Pasadena Police Department into the 21st century of law enforcement.
- The Motorola Flex System has established a detailed base of statistics for 2022 and year-to-date for 2023. In January 2022, the FBI modified reporting standards for Part 1 Crimes to include specific identifiers within each category.
- The table below shows the forecasted Part 1 Crime numbers for 2023. It is predicted that crimes such as burglary and larceny will increase, though could be reduced with an increased law enforcement presence through hiring practices.

	2022	2023 (Through 03/30/23)	2023 (Forecasted)
Homicide	2	0	0
Rape	2	1	3
Robbery	9	2	6
Assault	126	22	66
Burglary	92	53	159
Larceny Theft	343	118	354
Grand Theft Auto	75	16	48
Arson	2	0	0

Recruit and Fill Vacant Police Department Sworn and Non Sworn Positions

- The Police Department has 55 authorized full-time positions, along with six (6) part-time employees, one (1) Reserve Police Officer, and two (2) volunteers.
- The Department currently has 13 unfilled positions, and due to nationwide challenges in law enforcement hiring, is planning to fill eight (8) of these vacant positions in FY 23-24.

	Authorized	Vacant	Filled	KPI Status
Sworn Officer	37	7	30	3
Police Assistant	9	1	8	1
Records Clerk	5	2	3	1
Management Analyst	1	0	1	0
Parking Control	3	1	2	1
Cadets	6	2	4	2

Increased Community Engagement

- Due to the covid-19 pandemic, many community events have been canceled or on hold since 2020.
- The Police Department is ramping up community engagement efforts to reach pre-pandemic levels for events and communication with stakeholder groups.
- For the FY 22-23, the Department took part in or held the following events: Open House, Coffee with the Chief, Neighborhood Watch Meetings, Eggstravaganza, Catalytic Converter Etching Events, and the Women's Self-Defense Class.

DRAFT

Fire

Fiscal Year 2022-23 Budget Snapshot

Overview

The Fire Department provides for the protection of life, property, and the environment from the adverse effects of fires, medical emergencies, and hazardous conditions through progressive resource deployment. The Department offers Fire prevention programs and community education activities. The Fire Department provides emergency fire and life safety response services around the clock every day of the year.

Notable Changes – Wages and Benefits

Increases in wages and benefits are associated with increased retirement costs and health benefit costs.

Notable Changes – Operations and Maintenance

While there are no significant increases in Operations and Maintenance, some Operations and Maintenance costs have increased due to increases in the Consumer Price Index.

Capital Outlay

There are no proposed Capital Expenses for Fiscal Year 2023-24 Budget.

DRAFT

Budget Detail

PERSONNEL SERVICES

7000 Regular Salaries
Funds fire administration, command/suppression personnel, and support staff.

7020 Overtime
Funds the cost of overtime for non-management personnel. Overtime is used for duties that cause an employee to work beyond their scheduled end-of-shift, and overtime required to fill minimal staffing requirements.

7035 Overtime-Fire Strike
Funds the cost of overtime for non-management personnel for out-of-area strike team responses.

7040 Holiday
Funds overtime compensation for employees required to work on Holidays.

7045 Overtime – Filming Detail
Funds the cost of overtime for providing security at filming locations. The City is reimbursed fully by the film companies for this overtime.

7070 Leave Buyback
Funds employees who opt to sell back hours of their leave balances.

OPERATIONS & MAINTENANCE

8000 Office Supplies
Provides funds for the purchase of departmental office supplies; stationary, file dividers, boxes, clipboards, filing cabinets, workstation supplies, printer supplies, copy paper, (Staples Business Advantage $2,500); letterhead, envelopes, printing, (Cantu Graphics Inc. $500); other general office supplies, (Amazon Capital Services, Inc. $700). (Total $3,700).

8010 Postage
Provides funds for department Fire and Life Safety bulk mailings; inspection forms, paramedic subscription program correspondences, Federal and State Government mailings and postal expenses. (Total $1,100).

8020 Special Department Supplies
Provides funds for extraordinary department supplies and services including: unanticipated damaged of firefighting equipment, EMS Personal Protective Equipment, uniforms not identified in Safety Clothing and Equipment ($13,000); non-firefighting orientated equipment and station supplies, ($4,000); station and apparatus cleaning supplies ($4,500); linen services (CA Linen Services $6,500); department identification cards ($500); unanticipated repairs to front-line and

DRAFT

reserve firefighting apparatus ($13,500). (Total $44,000).

8024 Fire Strike Team Expense
Funds the cost of out-of-area Strike Team responses including, but not limited to, fuel, hotel expenses, food, and other supplies (Total $15,000).

8025 Paramedic and Emergency Medical Services and Supplies
Provides funds for purchasing expendable medical supplies and equipment utilized during the delivery of paramedic and emergency medical services (Life Assist Inc. $20,000); expendable medical supplies including oxygen, (Airgas USA $4,000); intravenous fluids, and non-reusable medical devices, (Stericycle Inc. $500); defibrillator pads, and required pharmaceuticals, and other medical supplies, (Zoll Medical Corp. $12,000). (Total $36,500).

8026 Hazardous Materials
Provides funding for the purchase of hazardous materials inspection and compliance materials and disposal of non-medical hazardous waste, (Stericycle Inc. $500). (Total $500).

8027 Ground Emergency Medical Transport
Provides funds for participation in the State's Ground Emergency Medical Transport Program that enables the City to recover costs associated with the transportation of Medi-Cal patients. (Total $10,000).

8034 Accelerant Detection Canine
Provides funds for the purchase of supplies to support the department's accelerant detection canine ($1,000); veterinarian bills ($500); and annual recertification costs ($2,000). (Total $3,500).

8050 Printing and Duplicating
Provides for printing and duplication of fire prevention and brush abatement literature, public education materials, and disaster preparedness documentation, printing Inspection Notices, Brush Violation Notices (Cantu Graphics $250); fire prevention materials, (Alert-All Corp $250). (Total $500).

8060 Dues and Membership
Provides funds for membership in the Los Angeles Area Fire Chiefs Associations, ($700), Foothill Fire Chiefs and Training Officers Association, ($500); Regional Arson Strike Team, L.A. Area Fire Marshall's Association, National Fire Protection Association, ($300). (Total $1,500).

8080 Books and Training Materials
Provides funds to purchase fire codes, training manuals, educational videos/software, and professional development literature. (Total $2,000).

8090 Meeting and Conference Expense
Provides funds for conference attendance, meeting expenses, and transportation

DRAFT

to two annual conferences hosted by the Los Angeles Area Fire Chiefs Association. (Total $3,000).

8100 Vehicle Maintenance
Provides funding to cover the operating expenses, repairs, and preventive maintenance of all department vehicles. Repairs include emergency/unscheduled repairs to front line apparatus, (Valley Power Systems $20,000, Emergency Vehicle Group $5,000); replace and service fire apparatus tires, (Parkhouse Tires $3,500); service and repair of Air Utility air compressor, (Air Compressed Specialist $4,000); replacement and service of apparatus batteries, (Interstate Batteries $2,000); repairs and service to utility truck and staff vehicles, (Jack's Auto Repair $3,000). (Total $37,500).

8105 Fuel
Provides fuel for fire apparatus ($20,000 Diesel fuel) and ($10,000 unleaded gasoline). Total ($30,000).

8110 Equipment Maintenance
Provides funds for the maintenance, repair, or replacement of department rescue saws, hydraulic extrication equipment, lighting equipment, technical rescue tools, and related emergency response equipment (LN Curtis $5,000, All-Star Fire Equipment $4,000 and Extreme Safety $2,000). (Total $11,000).

8120 Building Maintenance
Provides funds for cleaning supplies, maintenance, and minor repair of the fire station facility (Westlake Hardware $5,000 and Home Depot $3,000); routine repair and maintenance costs related to gasoline and diesel fuel distribution system ($2,000). (Total $10,000).

8134 Safety Clothing and Equipment
Provides funds to purchase and maintain Cal OSHA mandated personal protective equipment, structural firefighting gear, brush firefighting gear, self-contained breathing apparatus, and chemical protective suits (All-Star Fire Equipment $20,000, LN Curtis $10,000, Gall's $2,500 and Tom's Uniforms $2,500). (Total $35,000).

8170 Professional Services
Provides funds for contract services that provide mandated medical continuing education for paramedics and firefighters, emergency medical services program quality assurance (UCLA Regents/Medical Center $35,000); critical incident stress counseling and mental health services (Premier First Responders CISD $10,000); employee medical monitoring including bi-annual physicals, new employee physicals, communicable disease prevention training (St. George Occupational Health $3,500); Cal OSHA mandated respiratory protection annual testing ($3,500); comprehensive assessment of the Fire Department ($100,000). (Total $152,000).

DRAFT

8180 Contract Services

Provides funds for comprehensive fire dispatching and emergency radio communications services from the Verdugo Dispatch Center ($165,000); third party paramedic services billing through Wittman Enterprises LLC ($50,000); software to support electronic paramedic patient forms from Digital EMS Solutions ($7,500); Software to support dispatch mobile computer terminals in fire apparatus (ESO Solutions $2,900); and software to support the electronic fuel pumps for fire apparatus from EJ Ward ($500). (Total $225,900).

8183 Contract Services – San Marino

Provides funds for comprehensive shared Fire Command Staff of one (1) shared Division Chief and associated equipment with the City of San Marino, ($130,000); training platform to support the shared agreement, (Target Solutions $2,500). (Total $132,500).

8200 Training Expense

Provides funds for mandated and specialized training necessary for the maintenance of technical firefighting, rescue skills, and paramedic recertification. Includes training for Department managers and supervisors in leadership and safety compliance issues. ($7,000); use of multi-agency Training Tower ($5,000). (Total $12,000).

8020 Special Department Expense

Provides funds for operational items such as EOC supplies and operations and disaster preparedness supplies (Direct TV $1,500, Satellite phones $2,000), EOC training for Department Directors and supplies to support EOC functionality ($3,500); Black Board Connect Mass Communication System (Blackboard Connect $17,500); supplies and equipment to support the City's Community Emergency Response Team ($5,000). (Total $29,500).

CAPITAL OUTLAY

8180 Contract Services

Provides funds for the updating of the City's Emergency Operations Plan and Local Hazard Mitigation Plan ($15,000); funds for managing hazardous vegetation on City owned vacant properties ($10,500). (Total $25,500).

DRAFT

Key Performance Indicators

UNITS OF MEASURE

This is the most basic unit of measurement. Includes raw sources of data that measure productivity. Includes both inputs (number of requests, cases, applications, complaints, referrals received); and outputs (number of requests, cases, applications, complaints, referrals closed).

Total Response Time
- Fires
- EMS

Turnout Times
- Fires
- EMS

Number of Emergency Calls
- Fires
- EMS
- Service

Number of EMS Transports

Number of Mutual/Automatic Aid Responses
- Given
- Received

Number of Fire Prevention Inspections
- Company Field
- Mandated Occupancy Inspections
- Certificate of Occupancy (COO)/ New Business
- Brush Clearance

Number of Plan Checks
- Fire Sprinkler
- Fire Alarm
- Building

Training Hours

Leave Usage
- Sick
- Comp
- Worker's Comp/ IOD hours

DRAFT

KEY PERFORMANCE INDICATORS

Measures that would indicate success in achieving your department's core missions. Measures of volume and efficiency. Targets successfully delivered.

- Reduction and Maintenance of Response Times consistent with NFPA 1710
- Reduction and Maintenance of Turnout Times consistent with NFPA 1710
- Compliance with DHS and Departmental EMS QA and QI Indicators and Standards
- Complete 100% of Company Field Inspections annually
- Complete 100% of Brush Clearance Inspections annually
- Complete Mandated Occupancy Inspections
- Complete COO / New Business Inspections within 5 days of request
- Complete Plan Checks
- Complete all required Training Hours annually
- Adequately manage sick leave usage
- Adequately manage worker's comp / IOD hours
- Conduct an appropriate number of Public Education events annually (measure through attendance, candy canes, pancakes, ticket sales, etc…)
- Increase attendance at events and education opportunities

OUTCOMES MEASUREMENT

Measures of success as seen from the perspective of the end user (a customer): reduced processing times, easier access, quicker response, successful resolution of problems. Indicators might include measures of health and happiness, economic improvements, etc.

- Response Time Reductions
- Reduction in plan check turn-around time
- Annual visit by Fire Company to businesses and apartments
- Fast processing of COO / New Business inspections
- Superbly trained and effective personnel
- Crew consistency, camaraderie, morale, enthusiasm
- Happy and large attendance at events and education opportunities

MEASURES OF CUSTOMER SATISFACTION

Identify three means by which you would propose to measure customer satisfaction.

- Community Surveys / Public Forums / Town Hall
- City Website
- Online Questionnaires / Surveys
- Community Events / Feedback
- Public Education Events / Feedback
- Social Media
- Comment Cards

DRAFT

Public Works

Fiscal Year 2022-23 Budget Snapshot

Overview

The Public Works department is pleased to submit the Fiscal Year 23-24 budget proposal. The Public Works Department is comprised of four divisions: the Engineering Division, Operations & Maintenance Division, Environmental Services & Sustainability Division, and the Water Division.

The Engineering Division is responsible for:

- Interagency Coordination (METRO, Arroyo Verdugo Communities Joint Powers Authority, San Gabriel Valley Council of Governments, Federal Highway Administration, Caltrans, CalRecyle, LA County, and neighboring jurisdictions).
- Capital Improvement Projects, including design, plan review, construction management, and inspections.
- Grants administration, and contracts award and management.
- Transportation Programs and Traffic Operations, including Active Transportation and Intelligent Transportation Systems.
- Private Developments, plan reviews, right of way improvements' inspections, traffic, and environmental impact studies.
- Issuance of right of way encroachment permits.
- Supporting Public Works & Mobility and Transportation Infrastructure Commissions.

The Maintenance Division is responsible for:

- Parks and Urban Forest Management.
- Traffic Signals, Street Lights, and Facilities.
- Street and sidewalk maintenance, and traffic control setup for special events.
- Storm Drain and sewer system maintenance.
- Utility Coordination.

The Environmental Services & Sustainability Division is responsible for:

- Compliance of state mandates involving waste (including, but not limited to, AB1594, SB1383, AB1826, AB2048, AB827, AB939, etc.), water conservation (implementation of drought restrictions), emissions reductions (AB32, etc.), etc.
- Management of City's waste hauling and recycling contracts and services.
- Development, implementation, and management of water conservation programs including, but not limited to, rebates, assessments, workshops, education, and outreach.
- Coordination of sustainability events including, but not limited to, Earth Day events, Compost and Mulch Giveaways, Community Workshops/Meetings, etc.
- Working with City non-profit organizations to promote sustainability in the community and provide sustainability education.

DRAFT

- Working with regional and state organizations such as San Gabriel Valley Council of Governments, San Gabriel Valley Mosquito and Vector Control District, Upper San Gabriel Valley Municipal Water District, Metropolitan Water District, California Department of Resources Recycling and Recovery (CalRecycle), Clean Power Alliance, on others.
- Implementation of the City's Green Action Plan (Green Plan) and Climate Action Plan (CAP) including, but not limited to, building electrification, plastics reduction, energy efficiency, leaf blower restriction, and carbon sequestration measures.
- National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) stormwater compliance.
- Supporting the Natural Resources & Environmental Commission.

The Water Division is responsible for:

- Water production, treatment, and distribution, delivering of safe, clean water to over 6,200 connections.
- Water infrastructure maintenance consists of eight water storage tanks, six pump stations, and approximately 80 miles of pipelines.
- Water resources planning and coordination for short and long-term reliable water supplies.

Notable Changes – Wages and Benefits

- Increases in Wages and Benefits due to cost-of-living increases and increases in retirement and health insurance. Through the last fiscal year, several positions were consolidated or created, including the Transportation Program Manager.
- Reorganization of the Public Works department divisions and positions.

Notable Changes – Operations and Maintenance

- Increases in professional and contract services to accommodate expected workload and cost increases.
- Increases in building maintenance budgets to accommodate necessary parks and facilities repairs, including HVAC systems.
- Increasing the allocation of expenditures to revenue accounts, including gas tax, Measure M, Measure R, and Measure W Safe Clean Water Program.

Capital Outlay

- Traffic Signals – Cabinet replacement or upgrades
- Street Maintenance – Operations & Maintenance Division Truck
- Water Distribution – Water Division Vehicle, forklift, and backhoe concrete breaker attachment
- Water Production – Valve Truck for preventative maintenance valve exercise program
- Water Efficiency – Vehicle refurbishment for environmental conservation promotion

DRAFT

Budget Detail

PERSONNEL SERVICES

7000 Salaries – Regular Employees
Provides the partial compensation for Engineering Division & Administrative Staff. Refer to the Appendix for a detailed allocation list.

7010 Salaries – Part-Time
Funds partial compensation for seasonal, Public Works Intern, and other non-salaried part-time employees.

7020 Overtime
Funds the cost of overtime for non-management staff attending commission meetings and, as authorized, official City events outside of regular office hours.

7070 Leave Buyback
Funds employees who opt to sell back hours of their leave balances.

OPERATIONS & MAINTENANCE

8000 Office Supplies
Funds department office supplies ($3,000).

8010 Postage
Funds City mailings and overnight deliveries ($2,000).

8020 Department Expense
Provides funds for Public Works Engineering supplies and services including county assessor maps, and data updates ($4,000), expenditures related to promotional materials, event supplies, or other materials ($1,000), annual software subscriptions ($15,000), County Recorder recording fees ($1,000), State Water Resources Control Board Waste Discharge Fee ($4,000), San Gabriel Valley Council of Gov. program participation ($5,000), Annual AQMD Generator permit fee ($1,000). (Total $31,000)

8040 Advertising
Provides funds for advertising of legal notices, recruitment postings, and notices of various City activities. (Total $2,000)

8050 Printing and Duplication
Provides funds for the printing and duplication of materials, utility bill inserts, business cards, reprographic costs for oversized maps and plans, and costs for duplications of plans and specifications for bidding purposes. (Total $7,500)

8060 Dues, Memberships, Subscriptions, and Books
Provides funds for membership fees, dues, subscriptions, and publications of

DRAFT

professional organizations such as the American Society of Civil Engineers (ASCE) ($2100) and the American Public Works Association (APWA) ($1,600), International City/County Management Association (ICMA) Membership ($200) as well as other professional organizations, and license certification renewal fees, books, and seminars ($500). (Total $4,400)

8090 Conference and Meeting Expense
Provides funds for conference registration and meeting expenses. (Total $3,700)

8100 Vehicle Maintenance and Operations
Provides funds for operating vehicles including routine maintenance services, smog certifications, and repairs. (Total $2,000)

8105 Fuel
Provides funds for operational fuel expenses. (Total $3,000)

8134 Safety Clothing/Equipment
Provides for the purchase of safety equipment including but not limited to safety boots ($750), and first-aid supplies ($750). (Total $1,500)

8170 Professional Services
Professional on-call engineering services ($181,000), Pavement & Concrete Management Program ($64,000), Geographic Information System (GIS) maintenance services ($5,000), Slow Streets Program Implementation ($150,000). (Total $400,000)

8180 Contract Services
Contract Services for Slow Streets Program Implementation ($50,000)

8200 Training Expense
Provides funds for training seminars, materials, and job-related training sessions for engineers, inspectors, and administrative staff, as well as books and manuals. (Total $2,200)

Budget Detail

PERSONNEL SERVICES

7000 Salaries – Regular Employees
Funds partial compensation for Public Works Director, Deputy Public Works Director, Public Works Operations Manager, Streets Supervisor, Senior Civil Engineer, Associate Civil Engineer, two Public Works Inspectors, Senior Maintenance Worker, five Maintenance Worker I/II positions, Public Works Assistant, two Management Analysts, and several positions in the City Manager, Management Services and Finance departments. Refer to the Appendix for a detailed allocation list. Additional 5% incentive for obtaining California Water Environment Association certification.

7010 Salaries – Part-Time
Funds partial compensation for seasonal, Public Works Intern, and other non-salaried part-time employees.

7020 Overtime
Funds overtime pay for after-hours emergency response to sewer main stoppages and repairs.

7070 Leave Buyback
Funds employees who opt to sell back hours of their leave balances.

OPERATIONS & MAINTENANCE

8000 Office Supplies
Funds department office supplies ($1,000).

8020 Special Department Expense
Provides for special department supplies including fittings, jetting nozzles, manhole covers, sewer reel hoses, and other materials ($28,300), State Water Quality Control Board Sanitary Sewer Overflow Program fee ($3,500), and sewer related supplies and division expenses ($2,500). (Total $34,300)

8050 Printing/Duplicating
To provide funds for the printing and duplication of sewer related materials. (Total $500)

8060 Dues/Memberships/Subscriptions
Provides for membership to the California Water Environmental Association for division staff members. (Total $1,800)

8070 Mileage/Auto Allowance
Provides reimbursement funds for street maintenance related call outs. (Total $1,000)

DRAFT

8090 Conference & Meeting Expense
Provides funds for conference registration and meeting expenses related to sewer related matters. (Total $800)

8100 Vehicle Maintenance
Provides funds for operational costs for oil, tires, batteries, parts, repairs, and routine maintenance and repairs of Sewer Division vehicles. (Total $26,000)

8105 Fuel
Funds operational fuel expenses ($15,000).

8110 Equipment Maintenance
Provides for repairs and maintenance of sewer related equipment including sewer main cleaning equipment, the vactor truck, line video equipment, and compressor trailer. (Total $27,000)

8120 Building Maintenance
Provides for maintenance of sewer division garage at the Service Facility. (Total $5,000).

8130 Small Tools
Funds replacement of worn or damaged hand and power tools ($21,500).

8132 Uniform Expenses
Provides for the purchase of Uniforms, all functional City apparel and cleaning services. (Total $3,500)

8134 Safety Equipment & Supplies
Provides for the purchase of safety equipment and supplies, including safety vests, goggles, gloves, and other miscellaneous items ($1,350), steel-toed boots ($750), and First Aid equipment ($1,400). (Total $3,500)

8140 Utilities
Provides for the purchase of CNG gas for CNG fleet vehicles (Total $2,000)

8170 Professional Services
Fats, Oils and Grease (FOG) Inspection and Compliance Program ($20,000). GIS system retainer services ($10,000), wastewater rate study ($40,000), and shared cost for Acorn Technology IT Services ($30,000). (Total $100,000)

8180 Contract Services
Sewer main video, cleaning, spill containment services ($100,000), Sewer Maintenance and repairs ($15,000), and supplemental contracted labor ($25,000). (Total $140,000)

8191 Liability Insurance & Surety Bonds and Property

DRAFT

This account pays a 10% share of the City's self-insured costs, which goes to the Insurance Fund 105. The remaining portions are paid out of the General Fund (60%), Water Fund (25%), and LLMD (5%). (Total $200,000)

8200 Employee Training
Provides for training seminars and workshops related to sewer maintenance, including third party training. (Total $2,000)

8400 Overhead Allocation
Funds for administrative services provided by the General Fund ($69,022).

Budget Detail

PERSONNEL SERVICES

7000 Salaries – Regular Employees
Funds partial compensation for Public Works Director, Deputy Public Works Director, Street Supervisor, Senior Maintenance Worker, Public Works Operations Manager, Senior Civil Engineer, Associate Civil Engineer, two Public Works Inspectors, Management Analyst, and five Maintenance Worker I/II positions. Refer to the Appendix for a detailed allocation list.

7010 Salaries Part-time
Funds partial compensation for seasonal, Public Works Intern, and other non-salaried part-time employees.

7020 Overtime
Funds overtime pay for after-hours emergency response.

7070 Leave Buyback
Funds employees who opt to sell back hours of their leave balances.

OPERATIONS & MAINTENANCE

8000 Office Supplies
Funds department office supplies ($500) and miscellaneous expense ($500). (Total $1,000)

8020 Special Department Expense
This account provides for Street maintenance equipment, street signage and products ($50,000), materials such as asphalt, sand, base, rushed aggregate, emulsion, and concrete, and backfill soil ($70,000), breakroom supplies ($300). (Total $120,300)

8060 Dues, Memberships, Subscriptions, and Books
This account provides funding for construction handbooks and standard drawings/specifications. (Total $500)

8070 Mileage/Auto Allowance
Provides reimbursement funds for street maintenance related call outs. (Total $1,500)

8100 Vehicle Maintenance
Provides funds for operational costs for tires, tune-ups, preventative maintenance, smog certification, and miscellaneous repairs and parts for Street Maintenance Division vehicles. (Total $28,400)

DRAFT

8105 Fuel
Funds operational fuel expenses ($10,000).

8110 Equipment Maintenance
Provides funds for repair and maintenance of City owned equipment used by the Streets Division including loader tires, compressor, vibrating plates, forklift, message & arrow boards, and other machinery/equipment. (Total $35,000)

8130 Small Tools
Provides for replacement or purchase of worn or damaged hand and power tools including weed whackers, chain saws, gas powered trawler and demo hammer. (Total $6,000)

8132 Uniforms and Equipment
Provides for the purchase of Uniforms, all functional City apparel and cleaning services. (Total $3,500)

8134 Safety Equipment & Supplies
Provides for the purchase of safety equipment and supplies, including safety boots ($2,000), First Aid equipment ($1,400), and other safety supplies including vests, goggles, gloves, and other miscellaneous items ($2,100). (Total $5,500)

8140 Utilities
Provides for the purchase of CNG gas for CNG fleet vehicles (Total $2,000)

8170 Professional Services
Funds professional services for street and roadway related topics ($3,000).

8180 Contract Services
Provides for services rendered for street maintenance activities such as curb & gutter, sidewalk, and catch basin repair, striping and markings maintenance ($100,000), additional labor for supplementary maintenance services ($17,000), State Controller-Annual Street Reports ($3,000), Los Angeles County Public Works-Catch Basin Clean Out ($20,000). (Total $140,000)

8200 Training
Funds seminars and workshops related to street maintenance, signage and traffic control devices and methods ($2,000).

CAPITAL OUTLAY

8540 Vehicles and Equipment
Purchase an Operations & Maintenance Division Electric pickup truck (Total $65,000).

Provides funds for operational expenses such as oil, tires, batteries, parts, repairs, preventive and routine maintenance of division vehicles and smog certifications. (Total $14,000)

8105 Fuel
Provides funds for operational fuel expenses. (Total $20,000)

8110 Equipment Maintenance
Provides funds for repair and maintenance of City owned equipment including air hose supplies ($2,000) generator, ditch pumps, tapping machine, trench shoring systems, backhoe, compressor and miscellaneous electrical and pneumatic equipment ($8,000) and upgrade water line locator, leak detection devices, and pressure logger ($5,000). (Total $15,000)

8120 Building Maintenance
Provides for repairs to the facilities used by the Water Distribution Division and building supplies ($6,000) including automatic gate & garage door maintenance ($6,500), elevator maintenance at Garfield Reservoir ($4,500). (Total $17,000)

8130 Small Tools
Provides for replacement or purchase of worn or damaged hand and power tools, including purchase of electrical partner saw, generator ($5,000), pneumatic pumps ($3,000), and electrical pumps ($2,000). (Total $10,000)

8132 Uniforms and Equipment
Provides for purchase of Uniforms, all functional City apparel and cleaning services. (Total $3,500)

8134 Safety Equipment & Supplies
Provides for the purchase of personal protective equipment, including, safety vests, hard hats, ear plugs, gloves ($3,000), safety boots ($1,900), First Aid equipment ($500) and traffic control equipment including work zone signs, cones, and delineators ($4,000). (Total $9,400)

8140 Utilities
Provides funds for electrical service to Garfield Water Distribution Facility and all water sites by Southern California Edison ($80,000), CNG fuel ($3,000). (Total $83,000)

DRAFT

8150 Telephone
Provides funds for telephone service to Garfield Water Distribution Facility and all water sites, including meter reading network service. (Total $10,500).

8170 Professional Services
Provides professional services to update the water GIS to include water services and meters ($20,000), Water Rate Study ($80,000) and hydraulic model analysis for development projects including fire flow ($30,000), and other professional services ($54,500). (Total $184,500)

8180 Contract Services
Provides contract services to repair and replace water mains, valves, fire hydrants, and water services ($100,000) Meter reading system and support services ($10,000), water meter bee removal services ($3,000), landscaping contract services for water facilities ($24,000), Janitorial Services ($11,000), and Citywide Cross Connection Program management ($10,000). (Total $158,000)

8191 Liability Insurance & Surety Bonds and Property
This account pays a 25% share of the City's self-insured costs which goes to the Insurance Fund 105. The remaining portions are paid out of the General Fund (60%), Sewer Fund (5%), and LLMD (10%). (Total $490,000)

8200 Training Expense
Provides training seminars and workshops related to water system distribution certification, such as American Water Works Association ($1,200), SCUWA staff training ($400), California Rural Water and State Water Resources Control Board operator certifications ($400). (Total $2,000)

8229 Taxes
Property taxes paid to Los Angeles County for Water facilities located outside of South Pasadena City boundaries (Total $5,000).

8400 Overhead Allocation
Charges for administrative services provided by the General Fund (Total $117,114).

CAPITAL OUTLAY

8540 Vehicles and Equipment
Purchase a replacement Water Division Vehicle and forklift (Total $410,000).

Budget Detail

PERSONNEL SERVICES

7000 Salaries – Regular Employees
Funds compensation for three full time employees, including Senior Water Production/Treatment Operator, and two Water Production/Treatment Operators, and partial compensation for Public Works Director, Deputy Public Works Director, Water Operations Manager, Senior Civil Engineer, Civil Engineering Assistant, Public Works Assistant, Electrician, two Management Analysts, and Management Assistant. Refer to the Appendix for a detailed allocation list.

7010 Salaries – Part-Time
Funds partial compensation for seasonal, Public Works Intern, and other non-salaried part-time employees.

7020 Overtime
Funds overtime pay for afterhours emergency response to water production problems and for coverage during vacations, sick leave and other extended employee absences.

7040 Holiday
Funds employees whose work rotation falls on holidays.

7070 Leave Buyback
Funds employees who opt to sell back hours of their leave balances.

OPERATIONS & MAINTENANCE

8000 Office Supplies
Provides funds for office supplies and miscellaneous expenses. (Total $1,500)

8010 Postage
Provides funds for postal expenses for City mailings. (Total $400)

8020 Special Department Expense
Provides for special and miscellaneous department supplies and services including: salt for sodium hypochlorite generation at Wilson, Garfield, and Graves Reservoir ($23,400), chlorine analyzer solution and other water quality chemistry supplies($19,000), turbine oil ($1,000), backwash tank rentals ($3,000), chemical pipe supplies ($2,500), and parts and supplies ($2,500), SCADA DSL line at Wilson and Garfield Reservoir ($3,000), State Water Resources Control Board administration fees ($45,000), San Gabriel Basin Water Quality Authority administrative fee ($47,000), and staff physical exams and Class B driver license renewals ($200). (Total $146,600)

8050 Printing and Duplication
Provides funds for the printing and duplication of materials such as the annual

DRAFT

Consumer Confidence Report and water system maps. (Total $2,000)

8060 Dues, Memberships, Subscriptions
Provides funds for City membership fees and dues for the American Water Works Association. (Total $5,600)

8070 Mileage/Auto Allowance
To provide reimbursement for water related call outs. (Total $600)

8080 Books, Videos, Magazines, and Recordings
Provides funds for the purchase of reference books and manuals from AWWA. (Total $500)

8100 Vehicle Maintenance and Operations
Provides funds for operational expenses such as gas, oil, tires, batteries, parts, repairs, preventive and routine maintenance of division vehicles and smog certifications. (Total $6,000)

8110 Equipment Maintenance
Provides funds for pump maintenance and emergency services ($149,000), water softener ($3,000), generator services ($3,000), chlorine equipment maintenance ($25,000), valve & pump maintenance ($10,000), compressor maintenance ($5,000), Nitrate Analyzer Maintenance ($36,000). (Total $231,000)

8120 Building Maintenance
Provides funds to repair HVAC, painting, electrical maintenance, and gate maintenance at water facilities. (Total $10,500)

8130 Small Tools
Provides for replacement or purchase of worn or damaged hand and power tools. (Total $1,000)

8132 Uniforms and Equipment
Provides for the purchase of Uniforms, all functional City apparel and cleaning services. (Total $2,500)

8134 Safety Equipment & Supplies
Provides for the purchase of personal protective equipment, safety equipment and supplies including safety boots ($750), First Aid equipment ($1,500), gloves, hard hats, vest, ear plugs ($200), chemical resistant PPE ($500). (Total $2,950).

8140 Utilities
Provides for electric service to water system facilities used by the Water Production Division other than power for pumping (Total $7,000).

8150 Telephone
Provides telephone service to water system facilities (Total $1,200).

8152 Pumping Power
This account provides funds for electrical and energy charges associated with

DRAFT

operating wells and booster pumps. (Total $935,000)

8170 Professional Services
Provides for professional services such as water quality testing including water quality monitoring city wide and at the Wilson & Graves Wellhead treatment systems ($65,000), security services at elevated tanks and reservoirs ($3,000), consultant services for preparation of the annual Consumer Confidence Report and Water Audit, and as needed consulting services for water production ($60,000), SCADA system maintenance ($12,000), and water quality and treatment cost reduction study ($70,000). (Total $210,000)

8180 Contract Services
Granular activated carbon media replacement for Wilson Wellhead Treatment system and Graves Treatment system ($950,000), Graves Reservoir Ion exchange generation salt ($75,000), weed abatement and reservoir tree maintenance ($15,000), and waste brine treatment & disposal ($110,000). (Total $1,150,000)

8200 Training Expense
Provides for AWWA training seminars and workshops related to water supply and production to maintain required state certification of operators (Total $1,500).

8231 Water Purchases – Resale
This account provides funds to purchase water from the City of Pasadena ($45,000), Cal American Water ($5,000), and MWD purchase through Upper San Gabriel Valley Water District supplement the City's well production ($260,000). (Total $310,000).

8233 Watermaster Charges
This account provides the funds to pay for extraction of groundwater from the Main San Gabriel Basin within the City's water rights, excess extraction premiums beyond the adjudicated rights, and for fees for the cleanup of the ground water basin. (Total $1,350,000)

8400 Overhead Allocation
Charges for administrative services provided by the General Fund. (Total $205,267)

CAPITAL OUTLAY

8530 Computer Equipment
Provide replacement computer equipment for the Water Division Supervisory Control and Data Acquisition (SCADA) system. (Total $20,000)

8540 Vehicles and Equipment
Purchase a Water Division Valve Truck to implement a preventative maintenance valve exercise program. (Total $290,000)

Budget Detail

PERSONNEL SERVICES

7000 Salaries – Regular Employees
Funds partial compensation of Environmental & Sustainability Manager. Refer to the Appendix for a detailed allocation list.

7020 Overtime
Funds the cost of overtime for non-management staff attending City Council and commission meetings and, as authorized, official City events outside of regular office hours.

7010 Salaries – Part-Time
Funds compensation for a part time intern to assist in processing water conservation program permits.

OPERATIONS & MAINTENANCE

8000 Office Supplies
Provides funds for department office supplies ($2,000).

8010 Postage
Provides funds for postal related expenses for environmental newsletters and documents. (Total $2,500)

8020 Special Department Expense
Provides funds water conservation and sustainability supplies and services including, but not limited to, computer supplies, annual software subscriptions ($350), expenditures related to promotional materials, event supplies, or other materials ($2,650), Expenditures related to printing, document production, flyers, bill inserts, door hangers, custom items, and other media, marketing, or materials used for events, meetings, programs, outreach, and community classes related to water conservation education ($22,000). (Total $25,000)

8032 Water Efficiency Fee Projects
Provides funds for water conservation and efficiency programs such as residential and commercial water audits, contributing matching funds towards Metropolitan Water District rebate programs and establishing City water rebate programs and services. (Total $125,000)

8060 Dues, Memberships, Subscriptions, and Books
Water Conservation related memberships, including American Water Works Association (AWWA) and California Water Efficiency Partnership (CalWEP) (Total $2,500).

8070 Mileage Reimbursement
Provides funds for mileage reimbursement to water conservation, environmental and sustainability events (Total $200).

DRAFT

8090 Conference and Meeting Expense
Provides funds for attending conferences and meetings related to water conservation, environmental and sustainability (Total $2,000).

CAPITAL OUTLAY

8540 Automotive Equipment
Refurbishment of vehicle for promoting environmental conservation ($40,000)

DRAFT

Key Performance Indicators

The Public Works Department is committed to improving public engagement and community access to project and program information in Fiscal Year 2023-2024. In addition to completing a department reorganization and recruitment of critical positions, Public Works will implement quarterly newsletters and website project updates to communicate its many endeavors to City stakeholders.

Public Works Administration & Engineering

- Fulfillment of up to 2,000 service requests annually.
- Process 500 permits for encroachment, excavation, tree replacement, etc.

Water & Sewer Infrastructure

- Produce sufficient water for South Pasadena, approximately 4,000 acre-feet annually.
- Replace 50-100 meters, 10-12 fire hydrants, and 5-8 water service lines annually.
- Remove and replace up to 1,000 linear feet (LF) of water main pipelines.
- Collect 6,200 meter readings monthly.
- Perform at least 10 area leak detection inspections to identify and repair leaks
- Monthly sewer inspection and maintenance program.

Street & Sidewalk Maintenance

- Track repair and replacement of City sidewalks, curbs, and gutters.
- Track repair of street potholes.
- Track replacement of damaged asphalt.

Street/Median Trees & Parks Maintenance

- Plant 80-100 trees annually.
- Increase outreach and education programs regarding landscape & trees maintenance to quarterly.

Facilities & Street Lights

- LED light conversion for up to 50 street, park, and field lights annually.

Environmental Programs & Sustainability

- Increase water conservation rebate programs utilization by 25%.
- Provide 3 demonstrations and 2 citywide utility bill inserts/mailings promoting electric leaf blowers.

DRAFT

Customer Service and Response

- Provide responses to customers within 1 business days, and status updates on service requests with 10 business days.
- Respond to emergencies, including water service/main break leaks within 1 hour.
- Quarterly Updates on programs and projects.

DRAFT

Community Development

Fiscal Year 2022-23 Budget Snapshot

Overview

The Community Development Department is comprised of five divisions: Planning, Building and Safety, Community Improvement, Housing, and Film and Art. Staff in Community Development supports the Planning Commission, Cultural Heritage Commission, Design Review Board and Public Art Commission. The Planning staff administers the City's Zoning Code including land use and development regulations, processes land use permits, and undertakes long range land use planning. The Building staff enforces construction standards to safeguard life, health, and property by reviewing building plans for code compliance, issuing building permits, and performing construction inspections. The Community Improvement (code enforcement) staff works with property owners to secure compliance with the municipal code regarding property maintenance and operations. The Housing Division focuses on developing affordable housing policies and implementing strategies to improve housing opportunities for all income levels. Additionally, the Housing staff helps to monitor and implement the Housing Element programs. The department is also home to the South Pasadena Film Office which coordinates all filming activity in the City.

Notable Changes – Wages and Benefits

There is an increase in overall wages and benefits due to additional staffing needed in the department. A full-time Management Assistant position is being requested to help manage the department's four commissions and provide additional administrative assistance to the Housing Division. Additionally, this budget proposes to convert the part-time Community Improvement position to full-time to help with the code cases and to respond to various new City codes and State laws such as the ban on gas powered leaf blowers, and AB 838 tenant health and safety complaints.

Notable Changes – Operations and Maintenance

There is a significant increase in professional services to contract planning firms and consultants to assist with the implementation of the housing programs in the State mandated 6th Cycle Housing Element Update 2021-2029. During this fiscal year the department will be making significant zoning code amendments and finalize the General Plan and Downtown Specific Plan updates, among other department priorities. In addition, the budget for Professional Services includes an extensive work plan including:

- Zoning Code amendments;
- Tenant Protection Programs;
- Cultural Heritage Ordinance update; and
- Department organizational and operational assessment.

Capital Outlay

Improvements to the Housing Authority owned property (308 San Pasqual) are needed within the fiscal year including reroof, septic tank inspection and potential pumping, and kitchen rehabilitation.

DRAFT

Funds minor building maintenance of Arroyo House ($5,000).

8121 Utility Credit – Arroyo House
Funds credit of $100 per month for the Arroyo House per the lease agreement ($1,200).

8180 Contract Services
Funds to contract with for landlord/tenant assistance and fair housing ($10,000).

DRAFT

Key Performance Indicators

The Community Development Department strives to provide excellent customer service by efficiently managing workload and thereby reducing processing times, building plan check approvals, and permit issuance.

Administration
Encourage interdepartmental collaboration to improve entitlement applications and public information regarding development projects; continue to improve department processes; and finalize objective development standards to streamline development application process.

- Assist City Manager's Office with regular updates for the citywide newsletter
- Conduct interdepartmental development coordination meetings: 6
- Conduct a department organizational and operational assessment
- Conduct community outreach efforts including informational workshops or study sessions related to housing programs, Downtown Specific Plan, and General Plan Update: 4

Planning & Building
Reduce processing time for discretionary applications and building plan check by implementing the electronic permitting system.

- Process discretionary applications (PC, CHC, DRB): 35
- Process administrative (by-right) applications (DRB/CHC Chair Review, Staff Review): 90
- Process ADU applications: 55

Community Improvement
Respond to code complaints by investigating, opening cases when appropriate, and driving cases toward a successful resolution.

- Prioritize all incoming cases as Level 1 (imminent health and safety hazards such as dangerous and unstable structures), Level 2 (significant code violations including substandard housing conditions), or Level 3 (other code violations such as overgrown vegetation and blight):
  - Investigate all Level 1 cases by the end of the next business day
  - Investigate all Level 2 cases within five business days
  - Investigate all Level 3 cases within ten business days
- Work with the Housing Division to respond to tenant habitability complaints
- Provide quarterly reports to City Council on community improvement activities

Film & Art
Process film applications efficiently while eliminating impacts to residents and neighborhoods. Work closely with the Public Art Commission to promote public art projects and programs.

- Minimum film permits: 175

DRAFT

- Provide quarterly reports to City Council on film activity

Housing

The Housing Division will be responsible for tracking the implementation of the 6th Cycle Housing Element housing programs, track affordable units, and conduct community outreach efforts related to housing programs.

- Develop and propose new tenant protection programs
- Develop affordable housing opportunities including Caltrans vacant properties and Housing Authority owned site at 1503-1507 El Centro Street

DRAFT

Library

Fiscal Year 2022-23 Budget Snapshot

Overview

The Library Department is a community anchor and a resource and learning hub. It is a welcoming place for people of all ages, walks of life and socioeconomic backgrounds. People visit the Library to study, work, relax, and recharge. It is a place where people learn about their community, connect with their neighbors, and expand their horizons. The Library provides resources in a variety of formats to meet the information and learning needs of a diverse population. It supports reading readiness, literacy, lifelong learning, recreation, and professional development with its collections, programs, and services. The Library is open 7 days a week, for a total of 58 hours. In the first three-quarters of Fiscal Year 2022-23 the Library issued more than 2,000 new library cards, and an average of 14,285 patrons came through the doors every month. Borrowing is close to pre-pandemic levels, averaging 28,600 checkouts a month. Librarians at our reference desks helped around 80 patrons each day and presented programs attended by more than 7,700 people.

Fiscal Year 2022-2023 was a banner year at the Library. We saw library operations return to normal as the impacts of COVID-19 receded, and the Library Special Tax, which provides approximately 20% of the Library's budget, was renewed by 86.65% of the voters, and will continue until terminated by a majority vote of the electorate. A robust strategic planning process engaged the community and staff and resulted in a plan that will guide library programs and services for the next five years, as well as inform decisions about the allocation of human and fiscal resources. The plan outlines many exciting goals related to operations, the facility, technology, and services.

The Library's goals for Fiscal Year 2023-2024 are tied to the strategic plan and include implementing a Radio Frequency Identification (RFID) system that will improve customer self-service options and collection management, implementing a module for the Integrated Library System (ILS) that will streamline the acquisition of library materials, and securing funding from the California State Library for critical infrastructure and life-safety improvements to the facility.

Notable Changes – Wages and Benefits

The Library is not requesting any new positions or changes to positions for Fiscal Year 2023-24.

Notable Changes – Operations and Maintenance

The budget includes funding to enable librarians to attend The American Library Association's annual conference, which will be held in San Diego.

Capital Outlay

Funds have been designated to paint, re-carpet and replace the furniture in the teen area, as well as to replace the curbside book drops on Oxley Street.

Budget Detail

PERSONNEL SERVICES

7000 Regular Salaries
Provides compensation for a full-time staff of ten positions. These include 1 Library Director; 1 Public Services Manager, 1 Support Services Manager, 2 Adult Services Librarians, 1 Support Services Librarian, 1 Children's Librarian, 1 Administrative Secretary, 1 Library Technical Assistant, and 1 Library Clerk II.

7010 Wages - Seasonal and Part-Time Employees
Covers the compensation of part-time library staff members who are paid hourly rates, including passport services clerk and Community Room rental staffing, which are offset by fee income.

7020 Overtime
Provides compensation for any overtime use throughout the year, at one and one-half times the regular salary or wage. Overtime is very sparingly used to compensate non-exempt professional staff when program preparations, meetings, etc. require them to work beyond a regular 8-hour work day.

OPERATIONS & MAINTENANCE

8000 Office Supplies
Provides funds for the purchase of paper, stationery, rolls for receipt printers, folders, notepads, cash register and mailing supplies, toner, business cards, name badges, and general office supplies. (Total $7,500)

8010 Postage
Covers postage fees for correspondence, grant applications, invitations, overdue material notifications, and inter-library loan items lent or returned to their owning institutions. (Total $2,200)

8020 Special Department Expense
Funds the purchase of barcodes, security strips, CD and DVD cases and sleeves, supplies for children's programs, book trucks, archival supplies, book jackets, mending tape, display racks, and other miscellaneous provisions. Also provides funds for collection development resources for staff, performers' fees, special event insurance for Library programs, and software that supports the provision of services and resources to the public. (Total $22,500)

8030 Periodicals
Provides funds for hard copy magazine and English and foreign language newspaper subscriptions, including the *South Pasadena Review, South Pasadenan, Pasadena Star-News*, *Los Angeles Times,* and many others. (Total $7,100)

8031 Digital Resources
Provides funds for the purchase or licensing of digital resources, which are

DRAFT

remotely available 24/7. Resources include encyclopedias, streaming films, resources for readers, and interactive and foreign language e-books for kids. (Total $20,000)

8050 Printing and Duplication
Provides funds for the printing and duplication of brochures, promotional bookmarks, magnets, posters, library card applications, and a variety of other printed materials for the public. (Total $4,500)

8060 Dues and Memberships
Supports membership to the California Library Association, the Califa libraries consortium, Southern California Library Cooperative, American Library Association, and other professional organizations. Memberships provide discounted pricing on selected resources, continuing education, professional development, and networking opportunities. (Total $5,400)

8070 Mileage Reimbursement
Addresses mileage reimbursement when a staff member's private vehicle is used to conduct City business. Used mostly to compensate staff for attending required meetings and to support the training and continuing education of staff members at off-site workshops, meetings, and training sessions. (Total $100)

8080 Books/DVDs/CDs
Provides funds for the purchase and outsourced physical processing of books, music and audiobook CDs, and DVDs and Blu-rays. Annual circulation of materials exceeds 250,000. (Total $110,000)

8083 E-Books
Provides funds for the purchase of circulating digital books and digital audiobooks for children, teens, and adults. Annual circulation of digital books and audiobooks exceeds 28,000. (Total $36,000)

8090 Conference and Meeting Expense
Provides funds for conference and meeting travel expenses and registration fees for staff. The American Library Association annual conference will be held in San Diego in Fiscal Year 2023-2024. ($6,845)

8110 Equipment Maintenance
Includes funds for maintenance of automated external defibrillator units, maintenance of miscellaneous library equipment, and repairs to library security gates. (Total $3,000)

8120 Building Maintenance
Provides funds for elevator permit, miscellaneous emergency janitorial, plumbing, electrical, and other service and repairs, supplies related to building maintenance, funds for exterior steam cleaning and interior furniture cleaning, and for automated ADA door repairs. (Total $6,250)

8151 CENIC Wi-Fi Expenses
Provides funding for the out-of-pocket cost of high capacity, high speed

DRAFT

broadband connectivity for public and staff Wi-Fi. The Library receives California Teleconnect Fund (CTF) and Federal Communications Commission Schools and Libraries Program E-Rate reimbursements for a portion of this amount. Also includes $700 for SonicWall security for Wi-Fi router. (Total $11,500)

8155 Rental/Lease
Funds for postage meter lease. (Total $450)

8170 Professional Services
Includes $8,000 administering the Library Special Tax, including preparing and submitting the tax roll, and $2,000 for graphic design services. (Total $10,000)

8180 Contract Services
Provides $450 for security alarm maintenance, $1,100 for fire alarm system maintenance, $1,725 for emergency lighting system maintenance, and $3,500 for theft detection system and self-check kiosk maintenance. Includes $24,250 for cataloging records subscription, $2,400 for library asset recovery service, $2,325 for a book/CD/DVD ordering platform, $2,000 for a public computer reservation and printing system, and $46,800 for Integrated Library System product licensing, off-site hosting, and services. (Total $84,050)

8200 Training Expense
Provides funds for training materials, seminars, webinars, and job-related training sessions for library staff. (Total $2,500)

8257 Boards/Commissions
Funds for Library Board of Trustees' attendance at the annual California public library advocates workshop and the California Library Association annual conference, as well as design, printing, honoraria, and other expenses of the Trustees' Annual Volunteer Recognition event. (Total $1,500)

CAPITAL OUTLAY

8500 Building Improvements
Funds for installation of new Library patio tables and for Teen Room improvements. ($10,000)

8520 Machinery & Equipment
New ADA accessible exterior book drops and funds for Teen Room furniture. ($49,000)

DRAFT

Key Performance Indicators

The Library's main focus in the new fiscal year is to begin to meet the goals laid out in the Library's new Strategic Plan for the years 2023-2027.

Having filled the new full-time position in the Support Services Division late in fiscal year 2022-2023, we will be continuing to refine roles and responsibilities in the Division, and to document and revise the division's policies, procedures and workflows.

Special projects for 2023-2024 include converting the Library to a Radio Frequency Identification (RFID) collection management and security system, and pursuing grant funding from the California State Library for critical infrastructure improvements.

Outreach

- Add 700 people to the Library's e-newsletter recipient list
- Conduct 10 SPUSD and private school class visits at the start of the school year
- Give 4 off-site presentations about Library programs and services to community groups

Operations

- Review and revise 4 administrative policies
- Add 7,000 new items to the collection
- Rent the Community Room 20 times

Programs & Services

- Exceed 14,000 visitors per month on average
- Lend 25,000 items per month on average
- Present at least 8 programs for adults, such as book discussions, author talks, hands-on crafting, concerts, and films
- Exceed program attendance of 8,000 individuals annually

Community Services

Fiscal Year 2022-23 Budget Snapshot

Overview

The Community Services Department is pleased to submit the Fiscal Year 2023-24 budget proposal. The Community Services Department provides services within four divisions: Senior Division, Recreation Youth Division, Community Transit, and Community Services Division.

The following is a synopsis of the fiscal year for the Community Services Department.

The Senior Citizens Center, a multi-purpose facility, provides older adults with educational, social, physical, nutritional, and emotional services and city special events such as the Memorial Day Celebration. On-site meals, classes, and programs have resumed in person. Home-delivered meals continue to serve seniors residing within city limits.

The Recreation and Youth Division operates out of the Orange Grove Recreation Center and coordinates recreational classes for children and adults, after-school and summer child care, Facility and Park reservation, and city events such as Concerts in the Park, Eggstravaganza, Spooktacular, and Breakfast with Santa.

The Community Transit operates the Dial a Ride Program, which offers essential services for seniors, including rides to medical appointments, grocery stores, financial institutions, and social gatherings provided by the City. The Division has experienced an increase in ridership since the pandemic. A full-time Management Analyst and Management Assistant were hired to fill vacant positions. A new All-Electric 14 Passenger Van was purchased and is in operation. The Division will undergo an analysis of the Dial-A-Ride program.

The Community Services Division provides general department oversight plus budget and grant administration, park improvements, community liaison activities, and contract management of the Arroyo Seco Golf Course (Golf Course), Arroyo Seco Racquet Club, San Pascual Stables, South Pasadena Batting Cages, Ironworks Museum, and Tower Venture Cellular. All agreements have been fully executed with new contract terms except for the Golf Course which the agreement is on a month-to-month. The Golf Course completed a Market Support and Financial Analysis which is under review by City Council. An assessment of the Department was conducted by a consultant and recommendations will be implemented in FY 2023-2024. The Department implemented a new registration software called CivicPlus which will enhance the registration and reservation processes.

The staff supports the Community Services Commission, Festival of Balloons, South Pasadena Tournament of Roses Committee, and Recreation Leased Facilities Ad Hoc Committee.

Notable Changes – Wages and Benefits

The Community Services Department is requesting two position changes for Fiscal Year 2023-2024 as follows:

1. Upgrade a part-time Community Services Coordinator to one full-time Community Services Coordinator
2. Combine two part-time Management Aides to one full-time Management Aide
3. Complete a Compensation Compaction Study on the two Community Services Supervisor positions

DRAFT

Notable Changes – Operations and Maintenance

Senior Center:

- Upgrade the lobby, library, and staffing furniture
- Quarterly outreach mailers for senior programs

Administration:

- Installment of a new park sign at the Nature Park
- Install new alarm system at Ironworks Museum
- Annual maintenance fee for CivicPlus Software

Recreation:

- Replacement of all park signage such as park rules sign and gazebo area signage
- Painting of Camp Med room
- Purchase new kid size furniture for Camp Med

Dial-A-Ride

- Hire consultant to complete an Assessment of the Division

Capital Outlay

Construction of Berkshire and Grevelia Pocket Parks - see CIP (Park Impact Fees).

Key Performance Indicators

The Community Services Department is responsible for providing the community with recreational, cultural, and social programs for people of all ages in a safe and well-maintained facility. The department has three divisions comprising Senior, Recreation, and Transit Divisions. We facilitate special events, leisure classes, and senior services including lifelong learning, Dial-A-Ride and Nutrition Program, facility and gazebo reservations, after school and summer camps, and more. The Community Services Department builds a strong sense of community to improve the quality of life for all residents.

Administration

- Construction of Berkshire and Grevelia pocket parks
- Plan and implement the entire Festival of Balloons / Fourth of July event
- Establish a Memo of Understanding with the American Youth Soccer Association (AYSO)
  and South Pasadena Little League (SPLL)
- Collaborate with the South Pasadena Unified School District to update the Joint Use Agreement
- Continually seek innovative and creative ways to connect with the public while applying a strategic approach to all communication efforts
  - Identify and utilize technologies to directly communicate with participants in programming (*will be completed through CivicRec*)

Recreation

- Improve outreach of special events by partnering with additional local organizations
- Increase summer Camp Med enrollment by 15% from Summer 2022
- Increase online registration participation by 10% with the implementation of CivicRec
- Establish a Quarterly customer satisfaction survey at the conclusion of each program
- Re-establish the Volunteen Program for teens 13 -16 years of age

Senior Services

- Increase followers on the Senior Center Facebook page by 5% by the end of FY 2023-2024
- Improve Senior Center outreach by establishing a quarterly flyer to distribute through City billing
- Increase Senior Center Membership by 5%
- Host *What to do About Mom and Dad* seminar by partnering with local older adult advocates to increase awareness of aging matters and services
- Host three culturally diverse events at the Senior Center by the end of FY2023-2024
- Re-introduce volunteer program following the pandemic shutdown

Transit Division

- Assessment of Transit Division
- Establish a referral program to increase ridership
- Increase marketing strategies for the Dial-A-Ride service

DRAFT

Successor Agency – CRA Debt Service / 227-7200-7211

What is CRA?

Community Redevelopment Agency (CRA) has been Los Angeles' public partner in housing, commercial, neighborhood and economic development. CRA is dedicated to revitalizing, refurbishing, and renewing economically underserved areas of Los Angeles. CRA's main task is to lend a hand-to investors willing to take risks for a more vibrant city, to neighborhood resident with renewed aspirations for their communities, and to those in need who strive to take part in the city's growing prosperity. CRA helps increase the supply of housing for low income and moderate-income families, provide infrastructure for commercial and industrial development and create jobs necessary to maintain acceptable levels of employment.

Glossary of Budget Terms

APPROPRIATION
An authorization by the City Council to make expenditures/expenses and to incur obligations for a specific purpose within a specific time frame.

ASSESSED VALUATION
A dollar value placed on real estate or other property by the County of Los Angeles as a basis for levying property taxes.

AUDIT
A view of the City's accounts by internal audit staff or an independent auditing firm to substantiate fiscal year-end funds, salaries, reserves, and cash on hand.

BEGINNING/ENDING (UNAPPROPRIATED) FUND BALANCE
Unencumbered resources available in a fund from the prior/current fiscal year after payment of the prior/current fiscal year's expenditures/expenses. This is not necessarily cash on hand.

BOND
Capital raised by a City by issuing a written promise to pay a specific sum of money (called the face value or principal amount) at a specific date or dates in the future, together with periodic interest at a special rate. The most common types of bonds are General Obligation, Revenue and Special Tax bonds.

BUDGET
A fiscal plan of financial operation listing an estimate of proposed applications or expenditures/expenses and the proposed means of financing them for a particular time period. The budget is "Proposed" until it has been approved by the City Council. South Pasadena's budget covers one fiscal year, from July 1 through June 30.

CAPITAL IMPROVEMENT
A permanent addition to the City's assets, including the design, construction or purchase of land, buildings or facilities, or major renovations.

CAPITAL IMPROVEMENT PROGRAM
A financial plan of proposed capital improvement projects with single- and multiple-year capital expenditures/expenses.

CAPITAL OUTLAY
A budget appropriation category which budgets all equipment having a unit cost of more than $1,000 and which has an estimated useful life of over one year.

CAPITAL PROJECTS
Physical structural improvements with a cost of $5,000 or more and which have an estimated useful life of one year or more. Examples include a new park, building modifications or water system construction and improvements.

CITY MANAGER'S BUDGET MESSAGE
A general discussion of the budget and related financial issues.

DEBT SERVICE
Payment of the principal and interest on an obligation resulting from the issuance of bonds and notes.

DEBT SERVICE REQUIREMENTS
The amount of money required for paying principal and interest on outstanding debt and required contributions to accumulate monies for future retirement of term bonds.

DEFICIT
An excess of expenditures or expenses over revenues (resources).

DEPARTMENT
An organizational unit comprised of divisions and programs. It is the basic unit of service responsibility that encompasses a broad mandate of related activities.

DIVISION
A sub-section within a department which

DRAFT

furthers the objectives of the City Council by providing specific services or a product. Divisions are comprised of one or more programs.

ENCUMBRANCE
A legal obligation to pay funds, the expenditure/expense of which has not yet occurred. An encumbrance ceases when the obligation is paid or is otherwise terminated. Technically, encumbrances lapse at year's end and require Council action to re-appropriate funds to cover any remaining encumbrances.

ENTERPRISE FUND
A type of fund established for the total costs of those governmental facilities and services that are operated in a manner similar to private enterprises. Enterprise fund activities are entirely or predominately self-supporting. The City has three enterprise funds.

EXPENDITURE
The actual spending of governmental funds set aside by an appropriation.

EXPENSE
The actual spending of proprietary funds (Enterprise and Internal Service Fund types) set aside by an appropriation.

FISCAL YEAR
A twelve-month period of time to which a budget applies. South Pasadena's fiscal year is July 1 through June 30.

FUND
An independent fiscal and accounting entity used to record all financial transactions related to the specific purpose for which the Fund was created.

FUND BALANCE
The amount of financial resources available for use. Similar to retained earnings, this represents the excess of all prior year's operating surpluses and deficits. This includes cash on hand, and current assets less current liabilities.

GENERAL FUND
The primary fund of the City, it is used to account for all revenues and expenditures of the City not legally restricted as to use. The fund is used to account for the cost of the City's general operations. Examples of departments financed by the General Fund include the City Council, Police, Fire, and general government activities.

GOVERNMENTAL FUND
A type of fund that records revenues and expenditures of typical government activities. This fund type includes General, Special Revenue, Debt Service and Capital Project funds.

GRANT
Contributions, gifts of cash, or other assets from another governmental entity to be used or expended for a specific purpose, activity or facility. An example is the Community Development Block Grant (CDBG) provided by the Federal Government.

INTERFUND TRANSFERS
Monies transferred from one fund to another. Such money is transferred to finance the operations of another fund or to reimburse the fund for certain expenditures/expenses.

MATERIALS, SUPPLIES AND SERVICES
Expenditures/expenses for materials, supplies, and services which are ordinarily consumed within a fiscal year and which are not included in departmental inventories.

MUNICIPAL CODE
A book that contains the City Council approved ordinances currently in effect. The Code defines City policy with respect to areas such as planning, etc.

OBJECTIVES
The expected results or achievements of a budgeted activity.

OPERATING BUDGET
The annual appropriation of funds for on-

going program costs, including salaries and benefits, services and supplies, debt service, capital outlay, and capital improvements.

ORDINANCE
A formal legislative enactment by the City Council that has the full force and effect of law within City boundaries unless preempted by a higher form of law. An ordinance has a higher legal standing than a resolution.

PROGRAM
A sub-section of a division which provides specific services or a product; a program is the smallest unit of service. There may be one or more programs within a division.

RESERVE
An account used to record a portion of the fund balance as legally segregated for a specific use.

RESOLUTION
A special order of the City Council. A resolution has a lower legal standing than an ordinance.

RETAINED EARNINGS
The amount of financial resources available for use in an Enterprise fund. Similar to "Fund Balance", it represents the excess of all prior years' surpluses and deficits.

REVENUES
An amount received by the City from taxes, fees, permits, licenses, interest, intergovernmental sources and other sources during the fiscal year.

SALARIES, WAGES and EMPLOYEE BENEFITS
Budgeted expenditure categories that generally account for full time and part time employees, overtime expenses, and all employee benefits, such as medical and dental insurance and retirement benefits.

SPECIAL REVENUE FUNDS
This fund type collects revenues that are restricted by the City, County, State or Federal Government as to how the City might spend them.

DRAFT

Description of Funds

General Fund

101-General Fund – The General Fund is the primary operating fund of the City. The General Fund accounts for all financial resources except those required to be accounted for in another fund. That is, it is assumed that all of the City's activities are reported in the General Fund unless there is a compelling reason to report an activity in some other fund type. Generally Accepted Accounting Principles (GAAP) prescribe that a government report only one general fund.

There are at least three compelling reasons to account for a particular activity in some type of fund other than the General Fund:

- GAAP Requirements. In certain instances, GAAP require the use of another fund type. Examples of such requirements are found in reporting for resources that are required to be held in trust for employee pension plans, other postemployment benefit plans, or other employee benefit plans. The City does not have such plans.
- Legal Requirements. There may be legal requirements that a certain fund type be used to account for a given activity. Most special revenue sources that are legally restricted to expenditure for specified purposes (Capital Growth Fund, grants, local return of Proposition A and C, CDBG, Gas Taxes, etc.) fall into this accounting category.
- Financial Administration. The demands of sound financial administration may require the use of a fund other than the General Fund. For example, the City has found it appropriate to account for the Parking and Business Improvement Tax, and Mission Meridian Public Garage in this manner.

Internal Service Funds

Internal service funds account for activities that provide goods or services to other funds, departments, or agencies of the primary government and its component units, or to other governments, on a cost-reimbursement basis. Funds included are:

103-Insurance Fund – To provide resources for general liability and workers' compensation insurance claims.

Special Revenue Funds

Special revenue funds account for the proceeds of specific revenue sources that are legally restricted to expenditures for specified purposes. Funds included are:

201-MTA Pedestrian Improvement Fund – To account for MTA grants used for the Fair Oaks/Mission pedestrian improvement projects which include pedestrian accessibility, widened bikeways, landscaping, lighting modification and aesthetics.

205-Proposition "A" Local Return Fund – To account for all revenues and expenditures associated with the one-half cent sales tax approved by Proposition A in 1980. All revenues of this fund must be expended for transportation-related items as established by the Los Angeles County Transportation Commission.

DRAFT

206-State and Local Recovery Fund (SLRF) – To account for all revenues and expenditures associated with this State fund.

207-Proposition "C" Local Return Fund – To account for all revenues and expenditures associated with the one-half cent sales tax approved by Proposition C in 1990. All revenues of this fund must be expended for transportation-related items as established by the Los Angeles County Transportation Commission.

209-Carlyle Library Bequest – Carlyle donation

208-TEA/Metro Fund – To account for all revenues and expenditures associated with the TEA/Metro Fund. All revenues of this fund must be expended for transportation-related items.

211-CTC Traffic Improvement Grant Fund – To account for state and federal funding of street and intersection improvements relieving congestion at our busiest intersections.

215-Street Lighting and Landscaping Fund – To account for the costs associated with the City's street lighting and median landscaping programs. These costs are deemed to benefit all property owners who are assessed their proportionate share of the costs. These assessments are placed on the property tax bill and collected and remitted to the City by the County of Los Angeles.

217-Public, Education, and Government Fund – To account for revenues and expenditures used for public education and government access charges that the City's cable franchise collects. Monies in this fund must be used to purchase equipment related to the production of public education and government access television.

218-Clean Air Act Fund – To account for revenues and expenditures expended for air quality improvement projects as established by the South Coast Air Quality Management District.

220-Business Improvement Tax (BIT) Fund – To account for business improvement tax returns collected by the City for specified purposes within the Parking and Business Improvement Area: (1) decoration of any public place, (2) promotion of public events; (3) furnishing of music; (4) general promotion of retail trade activities.

223-Gold Line Mitigation Fund – To account for the MTA's funding for the improvements to the Gold Line Mission Street Station.

226-Mission Meridian Public Garage Fund – To account for the revenues and expenditures of the Mission Meridian Public Garage.

228-Housing Authority Fund – To account for the revenues and expenditures for the City of South Pasadena Housing Authority.

230-State Gas Tax Fund – To account for all state gas tax related revenues and expenditures, including street repair, reconstruction and maintenance. State law requires these gasoline taxes to be used to maintain the City's street and highway system.

232-County Park Bond – To account for the revenues and expenditures for the County Park Bond related improvements.

DRAFT

233-Measure R Fund – To account for all revenues and expenditures associated with the one-half cent sales tax approved by Measure R in 2009. All revenues of this fund must be expended for transportation-related items as established by the Los Angeles County Transportation Commission.

234-LACMTA Measure M MAT Grant Fund – To account for all revenues and expenditures associated with the one-half cent sales tax approved by Measure M in 2016. All revenues of this fund must be expended for transportation-related items eligible under the Metro Active Transportation, Transit and First/Last Mile (MAT) Program.

236-Measure M Fund – To account for all revenues and expenditures associated with the one-half cent sales tax approved by Measure M in 2016. All revenues of this fund must be expended for transportation-related items as established by the Los Angeles County Transportation Commission.

238-MSRC Grant Fund – To account for the revenues and expenditures for the Mobile Source Air Pollution Reduction Review Committee projects.

245-Bike and Pedestrian Paths Fund – To account for the revenues and expenditures for bike and pedestrian facilities improvements funded by the State of California Transportation Development Act.

247-SGVCOG Grant Fund – To account for the revenues and expenditures to implement the Slow Streets Program funded by San Gabriel Valley Slower, Safer Street Program.

248-BTA Grant Fund – To account for the revenues and expenditures for the Bicycle Transportation Account (BTA) grant funded by the Los Angeles County Metropolitan Transportation Authority. This grant was awarded to fund two projects from the City's Bicycle Master Plan: the Mission Street Green Sharrow Lane Project and the South Pasadena Bicycle Parking Project.

249-Open Streets Grant Fund – To account for the revenues and expenditures for the open streets grant funded by the Los Angeles County Metropolitan Transportation Authority. The goals of the Open Streets Grant Program is to provide opportunities for 1) riding transit, walking and riding a bike, possibly for the first time, 2) to encourage future mode shift to more sustainable transportation modes, and for 3) civic engagement to foster the development of multi-modal policies and infrastructure at the city/community level.

255-Capital Growth Requirement Fund – To account for fees paid to the City for building development to be applied towards the costs of public facilities improvements.

260-Community Development Block Grant (CDBG) Fund – To account for the revenues and expenditures for Community Development Block Grant projects.

270-Asset Forfeiture Fund – To account for proceeds received from forfeiture in narcotics investigations allocated for law enforcement activities.

272, 273 & 274-Federal and State Public Safety Grant Funds – To account for the operations of various federal and state grants, including COPS grants, and Homeland Security grants.

DRAFT

275- Park Impact Fees Fund – To account for the proceeds of a development fee used for the purpose of park facilities improvements and related expenditures.

277- Highway Safety Improvement Program Grant (HSIP) Fund – To account for revenues and expenditures related to street improvements funded by the grant.

Enterprise Funds

An enterprise fund may be used to report any activity for which a fee is charged to external users for goods or services. GAAP also require the use of an enterprise fund for any activity whose principal external revenue sources are used as the sole leverage for issuance of debt; if the cost of providing services must legally be recovered through fees or charges; or if the government's policy is to establish activity fees or charges designed to recover the cost of providing service.

210 & 310-Sewer Fund – To account for the provision of sewer construction, maintenance and operation services to residents of the City.

295-Arroyo Seco Golf Course Fund – To account for revenues and expenses relating to the Golf Course.

500-Water Utility Enterprise Fund – To account for all the activities and operations of the Utility. The Utility has several functioning wells (in neighboring San Gabriel and San Marino), three functioning reservoirs, and maintains miles of water lines and transmission lines.

505-2016 Water Revenue Bonds Fund – To account for proceeds from the2016 Water Bond issuance. Proceeds from the bonds are to be used solely for water capital projects, and funds will be transferred over to the Water Fund as project expenses are drawn down.

550-Public Financing Authority Fund – To account for debt service and related expenses of the 2013 Water Bond issuance.

Capital Projects Funds

Governments often find it useful to report major capital acquisition and construction separately from their ongoing activities. Separate reporting enhances an understanding of the government's capital activities, and it helps to avoid the distortions in financial resources trend information that can arise when capital and operating activities are mixed.

104-Street Improvements Program Fund – To account for capital expenditures related to street improvements projects.

105-Facilities and Equipment Replacement Fund - To account the replacement costs of City vehicles and equipment.

108-SR110 General Fund Reserve Fund - To account for the capital expenditures related to improvement of transportation systems.

327-2000 Tax Allocation Bonds Fund – To account for capital expenditures for improvements

DRAFT

funded by the bonds formerly held by the Successor Agency to the Community Redevelopment Agency.

Fiduciary Funds

A fiduciary fund is used in governmental accounting to report on assets held in trust for others. When financial statements are prepared for fiduciary funds, they are presented using the economic resources measurement focus and the accrual basis of accounting.

110-OPEB Trust Fund – Reserves to off-set future other post-employment benefit costs

Basis of Budget Accounting

The City of South Pasadena's accounting records are maintained in full accordance with Generally Accepted Accounting Principles (GAAP), as established by the Governmental Accounting Standards Board (GASB).

The budget basis refers to when revenues and expenditures are recognized in the City's accounts. Our annual budget is prepared on the same basis as the City's Annual Comprehensive Financial Report (ACFR).

The modified accrual basis is followed in all governmental funds (General, Special Revenue, Debt Service and Capital). Under the modified accrual basis of accounting – wherein the measurement focus is placed on current financial resources rather than a determination of net income – revenues are recognized when they become measurable and available. The reported fund balance provides an indication of available, spendable resources. Expenditures are recognized generally when the related liability is incurred.

Enterprise Funds are accounted for using the accrual basis of accounting. This is an economic resources measurement focus. Revenues are recognized when they are earned, and expenses are recognized when incurred. The accrual basis focuses on net income, and the operating statements provide an indication of the economic net worth of the fund. For budgetary purposes, however, the reported fund balance is a calculation of liquid or near-liquid cash assets (current assets minus current liabilities).
